To the RIGHT HONOURABLE
T H O M A S

Earl of *Pembroke* and *Montgomery*,

*Baron Herbert of Cardiff, Lord Rofe of Kendal,
Par, Fitzhugh, Marmion, St. Quintin, and
Shurland; Lord President of his Majesty's most
Honourable Privy Council, and Lord Lieutenant
of the County of Wilts, and of South-Wales.*

My L O R D,

T HIS Treatise, which is grown up under your Lordship's Eye, and has ventured into the World by your Order, does now, by a natural kind of Right, come to your Lordship for that Protection, which you several Years since promised it. 'Tis not that I think any Name, how great soever, set at the beginning of a Book, will be able to cover the Faults that are to be found in it. Things in Print must stand and fall by their own Worth, or the Reader's Fancy. But there being nothing more to be desired for Truth, than a fair unprejudiced Hearing, no body is more likely to procure me that, than your Lordship; who are allowed to have got so intimate an Acquaintance with her, in her more retired Receffes. Your Lordship

is known to have so far advanced your Speculations in the most abstract and general Knowledge of Things, beyond the ordinary Reach, or common Methods, that your Allowance and Approbation of the Design of this Treatise, will at least preserve it from being condemned without Reading; and will prevail to have those Parts a little weighed, which might otherwise, perhaps, be thought to deserve no Consideration, for being somewhat out of the common Road. The Imputation of Novelty is a terrible Charge amongst those who judge of Men's Heads as they do of their Perukes, by the Fashion; and can allow none to be right, but the received Doctrines. Truth scarce ever yet carried it by Vote, any where, at its first Appearance: New Opinions are always suspected, and usually opposed, without any other Reason, but because they are not already common. But Truth, like Gold, is not the less so for being newly brought out of the Mine. 'Tis Trial and Examination must give it Price, and not any antique Fashion: And tho' it be not yet current by the public Stamp, yet it may, for all that, be as old as Nature, and is certainly not the less genuine. Your Lordship can give great and convincing Instances of this, whenever you please to oblige the Public with some of those large and comprehensive Discoveries you have made of Truths hitherto unknown, unless to some few, from whom your Lordship has been pleased not wholly to conceal them. This alone were a sufficient Reason, were there no other,

other, why I should dedicate this *Essay* to your Lordship; and its having some little Correspondence with some Parts of that nobler and vast System of the Sciences, your Lordship has made so new, exact, and instructive a Draught of, I think it Glory enough, if your Lordship permit me to boast, that here and there I have fallen into some Thoughts not wholly different from yours. If your Lordship think fit, that, by your Encouragement, this should appear in the World, I hope it may be a Reason, some time or other, to lead your Lordship farther; and you will allow me to say, that you give the World an Earnest of something, that, if they can bear with this, will be truly worth their Expectation. This, my Lord, shews what a Present I here make to your Lordship; just such as the poor Man does to his rich and great Neighbour, by whom the Basket of Flowers or Fruit is not ill taken, tho' he has more Plenty of his own Growth, and in much greater Perfection. Worthless Things receive a Value, when they are made the Offerings of Respect, Esteem, and Gratitude: These you have given me so mighty and peculiar Reasons to have, in the highest Degree, for your Lordship, that if they can add a Price to what they go along with, proportionable to their own Greatness, I can with Confidence brag, I here make your Lordship the richest Present you ever received. This I am sure, I am under the greatest Obligation to seek all Occasions to acknowledge a long Train of Favours I have

rcceived

iv The Epistle Dedicatory.

received from your Lordship; Favours, tho' great and important in themselves, yet made much more so by the Forwardness, Concern, and Kindnes, and other obliging Circumstances, that never failed to accompany them. To all this, you are pleased to add that, which gives yet more Weight and Relish to all the rest: You vouchsafe to continue me in some Degrees of your Esteem, and allow me a Place in your good Thoughts; I had almost said Friendship. This, my Lord, your Words and Actions so constantly shew on all Occasions, even to others when I am absent, that it is not Vanity in me to mention what every body knows: But it would be want of good Manners, not to acknowledge what so many are Witnesses of, and every Day tell me, I am indebted to your Lordship for. I wish they could as easily assist my Gratitude, as they convince me of the great and growing Engagements it has to your Lordship. This I am sure, I shall write of the *Understanding* without having any, if I were not extremely sensible of them, and did not lay hold on this Opportunity to testify to the World, how much I am obliged to be, and how much I am,

Dorset-Court, 24th
May, 1689.

My L C R D,

Your Lordship's

Most Humble, and

Most Obedient Servant,

J O H N L O C K E.

T H E
E P I S T L E
T O T H E
R E A D E R.

R E A D E R,

IHere put into thy Hands, what has been the Diversion of some of my idle and heavy Hours: If it has the good Luck to prove so of any of thine, and thou hast but half so much Pleasure in reading, as I had in writing it, thou wilt as little think thy Money, as I do my Pains, ill bestowed. Mistake not this for a Commendation of my Work; nor conclude, because I was pleased with the Doing of it, that therefore I am fondly taken with it, now it is done. He that hawks at Larks and Sparrows, has no less Sport, tho' a much less considerable Quarry, than he that flies at nobler Game: And he is little acquainted with the Subject of this Treatise, the UNDERSTANDING, who does not know, that as it is the most elevated Faculty of the Soul, so it is employed with a greater and more constant Delight, than any of the other. Its Searches after Truth, are a Sort of Hawking and Hunting, wherein the very Pursuit makes a great Part of the Pleasure. Every Step the Mind takes, in its Progress towards Knowledge, makes some Discovery, which is not only new, but the best too, for the Time at least

FOR the Understanding, like the Eye, judging of Objects only by its own Sight, cannot but be pleased with what it discovers, having less Regret for what has escaped it, because it is unknown. Thus he, who has raised himself above the Alms-Basket, and not content to live lazily on Scraps of begg'd Opinions, sets his own Thoughts on work, to find and follow Truth, will (whatever he lights on) not miss the Hunter's Satisfaction; every Moment of his Pursuit will reward his Pains with some Delight, and he will have Reason to think his

Time

The Epistle to the READER.

Time not ill spent, even when he cannot much boast of any great Acquisition.

THIS, Reader, is the Entertainment of those who let loose their own Thoughts, and follow them in writing; which thou oughtest not to envy them, since they afford thee an Opportunity of the like Diversiun, if thou wilt make use of thy own Thoughts in reading. 'Tis to them, if they are thy own, that I refer myself: But if they are taken upon Trust from others, 'tis no great Matter what they are, they not following Truth, but some meaner Consideration: And 'tis not worth while to be concern'd, what he says or thinks, who says or thinks only as he is directed by another. If thou judgest for thyself, I know thou wilt judge candidly; and then I shall not be harmed or offended, whatever be thy Censure. For tho' it be certain, that there is nothing in this Treatise, of the Truth whereof I am not fully persuaded; yet I consider myself as liable to Mistakes, as I can think thee; and know, that this Book must stand or fall with thee, not by any Opinion I have of it, but by thy own. If thou findest little in it new, or instructive to thee, thou art not to blame me for it. It was not meant for those that had already mastered this Subject, and made a thorough Acquaintance with their own Understanding; but for my own Information, and the Satisfaction of a few Friends, who acknowledged themselves not to have sufficiently consider'd it. Were it fit to trouble thee with the History of this Essay, I should tell thee, that five or six Friends meeting at my Chamber, and discoursing on a Subject very remote from this, found themselves quickly at a Stand, by the Difficulties that rose on every Side. After we had a while puzzled ourselves, without coming any nearer a Resolution of those Doubts which perplexed us, it came into my Thoughts, that we took a wrong Course; and that before we set ourselves upon Enquiries of that Nature, it was necessary to examine our own Abilities, and see what Objects our Understandings were, or were not fitted to deal with. This I proposed to the Company, who all readily assented; and thereupon it was agreed, that this should be our first Enquiry. Some hasty and undigested Thoughts, on a Subject I had never before considered, which I set down against our next Meeting, gave the first Entrance into this Discourse; which having been thus begun by Chance, was continued by Intreay; written by incoherent Parcels; and, after long Intervals of Neglect,

refumed

The Epistle to the READER.

resumed again, as my Humour or Occasions permitted; and at last, in a Retirement, where an Attendance on my Health gave me Leisure, it was brought into that Order thou now seest it.

THIS discontinued Way of Writing, may have occasioned, besides others, two contrary Faults, viz. that too little, and too much may be said in it. If thou findest any Thing wanting, I shall be glad that what I have writ gives thee any Desire that I should have gone farther: If it seems too much to thee, thou mayst blame the Subject; for when I first put Pen to Paper, I thought all I should have to say on this Matter, would have been contained in one Sheet of Paper; but the farther I went, the larger Prospect I had: New Discoveries led me still on, and so it grew insensibly to the Bulk it now appears in. I will not deny, but possibly it might be reduced to a narrower Compass than it is; and that some Parts of it might be contracted; the Way it has been writ in, by Catches, and many long Intervals of Interruption, being apt to cause some Repetitions. But to confess the Truth, I am now too lazy, or too busy to make it shorter.

I AM not ignorant how little I herein consult my own Reputation, when I knowingly let it go with a Fault, so apt to disgust the most judicious, who are always the nicest Readers. But they who know Sloth is apt to content itself with any Excuse, will pardon me, if mine has prevailed on me, where, I think, I have a very good one. I will not therefore alledge in my Defence, that the same Notion, having different Respects, may be convenient or necessary to prove or illustrate several Parts of the same Discourse; and that so it has happened in many Parts of this: But waving that, I shall frankly avow, that I have sometimes dwelt long upon the same Argument, and expressed it different Ways, with a quite different Design. I pretend not to publish this Essay for the Information of Men of large Thoughts, and quick Apprehensions; to such Masters of Knowledge, I profess myself a Scholar, and therefore warn them before-hand not to expect any Thing here, but what, being spun out of my own coarse Thoughts, is fitted to Men of my own Size; to whom, perhaps, it will not be unacceptable, that I have taken some Pains to make plain and familiar to their Thoughts some Truths, which established Prejudice, or the Abstractness of the Ideas themselves, might render difficult. Some Objects had need be turned on every Side;

The Epistle to the READER.

Side; and when the Notion is new, as I confess some of these are to me, or out of the ordinary Road, as I suspect they will appear to others, 'tis not one simple View of it, that will gain it Admittance into every Understanding, or fix it there with a clear and lasting Impression. There are few, I believe, who have not observed in themselves, or others, that what in one Way of proposing was very obscure, another Way of expressing it has made very clear and intelligible: Tho' afterwards the Mind found little Difference in the Phrases, and wondered why one failed to be understood more than the other. But every Thing does not hit alike upon every Man's Imagination. We have our Understandings no less different than our Palates; and he that thinks the same Truth shall be equally relished by every one in the same Dress, may as well hope to feast every one with the same sort of Cookery: The Meat may be the same, and the Nourishment good, yet every one not be able to receive it with that Seasoning; and it must be dress'd another Way, if you will have it go down with some, even of strong Constitutions. The Truth is, those who advised me to publish it, advised me, for this Reason, to publish it as it is: And since I have been brought to let it go Abroad, I desire it should be understood by whoever gives himself the Pains to read it. I have so little Affectation to be in Print, that if I were not flattered this Essay might be of some Use to others, as I think it has been to me; I should have confined it to the View of some Friends, who gave the first Occasion to it. My appearing therefore in Print, being on Purpose to be as useful as I may, I think it necessary to make what I have to say, as easy and intelligible to all sorts of Readers, as I can. And I had much rather the Speculative and Quick-sighted should complain of my being in some Parts tedious, than that any one, not accustomed to abstract Speculations, or prepossessed with different Notions, should mistake, or not comprehend my Meaning.

IT will poffibly be censured as a great piece of Vanity or Insolence in me, to pretend to instruct this our knowing Age, it amounting to little less, when I own, that I publish this Essay with Hopes it may be useful to others. But if it may be permitted to speak freely of those, who with a feigned Modesty condemn, as useless, what they themselves write, methinks it favours much more of Vanity or Insolence, to publish a Book for any other End; and he fails very much

The Epistle to the READER.

of that Respect he owes the Public, who prints, and consequently expects Men should read that, wherein he intends not they should meet with any thing of Use to themselves or others: And should nothing else be found allowable in this Treatise, yet my Design will not cease to be so; and the Goodness of my Intention ought to be some Excuse for the Worthlessness of my Present. 'Tis that chieflly which secures me from the Fear of Censure, which I expect not to escape more than better Writers. Men's Principles, Notions, and Relishes are so different, that it is hard to find a Book which pleases or displeases all Men. I acknowledge the Age we live in is not the least knowing, and therefore not the most easy to be satisfied. If I have not the good Luck to please, yet no body ought to be offended with me. I plainly tell all my Readers, except half a Dozen, this Treatise was not at first intended for them; and therefore they need not be at the Trouble to be of that Number. But yet if any one thinks fit to be angry, and rail at it, he may do it securely: For I shall find some better way of spending my Time, than in such kind of Conversation. I shall always have the Satisfaction to have aimed sincerely at Truth and Usefulness, tho' in one of the meanest Ways. The Commonwealth of Learning is not at this Time without Master-builders, whose mighty Designs, in advancing the Sciences, will leave lasting Monuments to the Admiration of Posterity. But every one must not hope to be a Boyle, or a Sydenham; and in an Age that produces such Masters, as the Great----Huygenius, and the incomparable Mr. Newton, with some other of that Strain; 'tis Ambition enough to be employed as an Under-Labourer in clearing the Ground a little, and removing some of the Rubbish that lies in the Way to Knowledge; which certainly had been very much more advanced in the World, if the Endeavours of ingenious and industrious Men had not been much cumbered with the learned but frivolous Use of uncouth, affected, or unintelligible Terms, introduced into the Sciences, and there made an Art of, to that Degree, that Philosophy, which is nothing but the true Knowledge of Things, was thought unfit, or incapable to be brought into well-bred Company, and polite Conversation. Vague and insignificant Forms of Speech, and Abuse of Language, have so long passed for Mysteries of Sciences; and hard or misapplied Words, with little or no Meaning, have by Prescription, such a Right to be mistaken for deep Learning, and Height of Speculation, that it will not be easy to

The Epistle to the READER.

persuade, either those who speak, or those who hear them, that they are but the Covers of Ignorance, and Hindrance of true Knowledge. To break in upon the Sanctuary of Vanity and Ignorance, will be, I suppose, some Service to Human Understanding: Tho' so few are apt to think they deceive or are deceived in the Use of Words; or that the Language of the Sect they are of, has any Faults in it, which ought to be examined or corrected; that I hope I shall be pardoned, if I have in the third Book dwelt long on this Subject, and endeavoured to make it so plain, that neither the Inveterateness of the Mischief, nor the Prevalency of the Fashion, shall be any Excuse for those, who will not take care about the Meaning of their own Words, and will not suffer the Significancy of their Expressions to be enquired into.

I HAVE been told, that a short Epitome of this Treatise, which was printed 1688, was by some condemned without reading, because innate Ideas were denied in it; they too hastily concluding, that if innate Ideas were not supposed, there would be little left, either of the Notion or Proof of Spirits. If any one take the like Offence at the Entrance of this Treatise, I shall desire him to read it thorough; and then I hope he will be convinced, that the taking away false Foundations, is not to the Prejudice, but Advantage of Truth; which is never injur'd or endanger'd so much, as when mixed with, or built on Falsehood. In the Second Edition, I added as followeth:

THE Bookseller will not forgive me, if I say nothing of this Second Edition, which he has promised, by the Correctness of it, shall make amends for the many Faults committed in the former. He desires too, that it should be known, that it has one whole new Chapter concerning Identity, and many Additions and Amendments in other Places. These, I must inform my Reader, are not all new Matter, but most of them either farther Confirmation of what I had said, or Explications, to prevent others being mistaken in the Sense of what was formerly printed, and not any Variation in me from it; I must only except the Alterations I have made in B. II. Chap. 21.

WHAT I had there writ concerning Liberty and the Will, I thought deserved as accurate a View as I was capable of: Those Subjects having, in all Ages, exercised the learned Part of the World with Questions and Difficulties, that have not a little perplexed Morality and Divinity; those Parts of Knowledge, that Men are most concern'd to be clear in. Upon a closer Inspection into the Working

The Epistle to the R E A D E R.

ing of Men's Minds, and a stricter Examination of those Motives and Views they are turned by, I have found Reason somewhat to alter the Thoughts I formerly had, concerning that which gives the last Determination to the Will in all voluntary Actions. This I cannot forbear to acknowledge to the World, with as much Freedom and Readiness, as I at first published what then seemed to me to be right; thinking myself more concern'd to quit and renounce any Opinion of my own, than oppose that of another, when Truth appears against it. For 'tis Truth alone I seek, and that will always be welcome to me, when or from whencesoever it comes.

BUT what Forwardness soever I have to resign any Opinion I have, or to recede from any thing I have writ, upon the first Evidence of any Error in it; yet this I must own, that I have not had the good Luck to receive any Light from those Exceptions I have met with in Print against any Part of my Book; nor have, from any Thing has been urged against it, found reason to alter my Sense, in any of the Points have been questioned. Whether the Subject I have in hand requires often more Thought and Attention, than cursory Readers, at least such as are prepossessed, are willing to allow: Or whether any Obscurity in my Expressions casts a Cloud over it, and these Notions are made difficult to others Apprehension in my Way of treating them: So it is, that my Meaning, I find, is often mistaken, and I have not the good Luck to be every where rightly understood. There are so many Instances of this, that I think it Justice to my Reader and myself, to conclude, that either my Book is plainly enough written to be rightly understood by those who peruse it with that Attention and Indifferency, which every one, who will give himself the Pains to read, ought to employ in reading; or else that I have writ mine so obscurely, that it is in vain to go about to mend it. Which ever of these be the Truth, 'tis myself only am affected thereby, and therefore I shall be far from troubling my Reader with what I think might be said, in Answer to those several Objections I have met with, to Passages here and there of my Book: Since I persuade myself, that he who thinks them of Moment enough to be concerned, whether they are true or false, will be able to see, that what is said, is either not well founded, or else not contrary to my Doctrine, when I and my Opposer come both to be well understood.

IF any, careful that none of their good Thoughts should be lost, have published their Censures of my Essay; with this Honour done

The Epistle to the R E A D E R.

to it, that they will not suffer it to be an Essay, I leave it to the Public to value the Obligation they have to their critical Pens, and shall not waste my Reader's Time in so idle or ill-natured an Employment of mine, as to lessen the Satisfaction any one has in himself, or gives to others, in so hasty a Confutation of what I have written.

THE Booksellers preparing for the Fourth Edition of my Essay, gave me notice of it, that I might, if I had Leisure, make any Additions or Alterations I should think fit. Whereupon I thought it convenient to advertise the Reader, that, besides several Corrections I had made here and there, there was one Alteration which it was necessary to mention, because it ran through the whole Book, and is of Consequence to be rightly understood. What I therupon said, was this.

CLEAR and distinct Ideas are Terms, which, tho' familiar and frequent in Men's Mouths, I have reason to think every one who uses, does not perfectly understand. And pessibly 'tis but here and there one, who gives himself the Trouble to consider them so far as to know what he himself or others precisely mean by them: I have therefore in most Places chose to put determinate or determined, instead of clear and distinct, as more likely to direct Men's Thoughts to my Meaning in this Matter. By those Denominations, I mean some Object in the Mind, and consequently determined, i. e. such as it is there seen and perceived to be. This, I think, may fitly be called a determinate or determined Idea, when such as it is at any time objectively in the Mind, and so determined there, it is annexed, and without Variation determined to a Name or articulate Sound, which is to be steadily the Sign of that very same Object of the Mind, or determinate Idea.

TO explain this a little more particularly. By determinate, when applied to a simple Idea, I mean that simple Appearance which the Mind has in its View, or perceives in it self, when that Idea is said to be in it: By determinate, when applied to a complex Idea, I mean such an one as consists of a determinate Number of certain simple or less complex Ideas, joined in such a Proportion and Situation, as the Mind has before its View, and sees in it self, when that Idea is present in it, or should be present in it, when a Man gives a Name to it: I say should be; because it is not every one, nor perhaps any one, who is so careful of his Language, as to use no Word, till he views in his Mind the precise determined Idea, which he resolves

The Epistle to the READER.

solves to make it the Sign of. The Want of this, is the Cause of no small Obscurity and Confusion in Men's Thoughts and Discourses.

I KNOW there are not Words enough in any Language, to answer all the Variety of Ideas that enter into Men's Discourses and Reasonings. But this hinders not, but that when any one uses any Term, he may have in his Mind a determined Idea, which he makes it the Sign of, and to which he should keep it steadily annexed during that present Discourse. Where he does not, or cannot do this, he in vain pretends to clear or distinct Ideas: 'Tis plain his are not so; and therefore there can be expected nothing but Obscurity and Confusion, where such Terms are made use of, which have not such a precise Determination.

UPON this Ground I have thought determined Ideas a Way of speaking less liable to mistake, than clear and distinct: And where Men have got such determined Ideas of all that they reason, enquire, or argue about, they will find a great Part of their Doubts and Disputes at an End. The greatest Part of the Questions and Controversies that perplex Mankind, depending on the doubtful and uncertain Use of Words, or (which is the same) indetermined Ideas, which they are made to stand for; I have made choice of these Terms to signify, 1. Some immediate Object of the Mind, which it perceives and has before it, distinct from the Sound it uses as a Sign of it. 2. That this Idea, thus determined, i. e. which the Mind has in itself, and knows, and sees there, be determined, without any Change; to that Name, and that Name determined to that precise Idea: If Men had such determined Ideas in their Enquiries and Discourses, they would both discern how far their own Enquiries and Discourses went, and avoid the greatest Part of the Disputes and Wranglings they have with others.

BESIDES this, the Bookseller will think it necessary I should advertise the Reader, that there is an Addition of two Chapters wholly new; the one of the Association of Ideas, the other of Enthusiasm. These, with some other larger Additions, never before printed, he has engaged to print by themselves, after the same Manner, and for the same Purpose, as was done when this Essay had the Second Impression.

IN the Sixth Edition, there is very little added or altered, the greatest Part of what is new, is contained in the 21st Chapter of the second Book, which any one, if he thinks it worth while, may, with a very little Labour, transcribe into the Margin of the former Edition.

14. *Those who maintain innate practical Principles, tell us not what they are.*
- 15-19. *Lord Herbert's innate Principles examined.*
20. *Obj. Innate Principles may be corrupted, answer'd.*
21. *Contrary Principles in the World.*
- 22-26. *How Men commonly come by their Principles.*
27. *Principles must be examined.*

C H A P. IV.

Other Considerations about innate Principles, both speculative and practical.

SECT.

1. *Principles not innate, unless their Ideas be innate.*
- 2, 3. *Ideas, especially those belonging to Principles, not born with Children.*
- 4, 5. *Identity, an Idea not innate.*
6. *Whole and Part, not innate Ideas.*
7. *Idœa of Worship, not innate.*
- 8-11. *Idea*

THE CONTENTS.

SECT.

- 8-11. Idea of GOD, not innate.
12. Suitable to GOD's Goodness, that all Men should have an Idea of him, therefore naturally imprinted by him, answer'd.
- 13-16. Ideas of GOD, various in different Men.
17. If the Idea of GOD be not innate, no other can be supposed innate.
18. Idea of Substance not innate.
19. No Propositions can be innate, since no Ideas are innate.

SECT.

20. No Ideas are remember'd, till after they have been introduced.
21. Principles not innate, because of little Use, or little Certainty.
22. Difference of Men's Discoveries depends upon the different Application of their Faculties.
23. Men must think and know for themselves.
24. Whence the Opinion of innate Principles.
25. Conclusion.

BOOK II.

C H A P. I.

Of Ideas in general, and their Original.

SECT.

1. Idea is the Object of Thinking.
2. All Ideas come from Sensation or Reflection.
3. The Objects of Sensation one Source of Ideas.
4. The Operations of our Minds, the other Source of them.
5. All our Ideas are of the one or the other of these.
6. Observable in Children.
7. Men are differently furnished with these, according to the different Objects they converse with.
8. Ideas of Reflection later, because they need Attention.
9. The Soul begins to have Ideas, when it begins to perceive.
10. The Soul thinks not always; for this wants Proof.

VOL. I.

11. It is not always conscious of it.
12. If a sleeping Man thinks, without knowing it, the sleeping and waking Man are two Persons.
13. Impossible to convince those that sleep, without dreaming, that they think.
14. That Men dream, without remembering it, in vain urged.
15. Upon this Hypothesis, the Thoughts of a sleeping Man ought to be most rational.
16. On this Hypothesis, the Soul must have Ideas not derived from Sensation or Reflection, of which there is no Appearance.
17. If I think, when I know it not, no body else can know it.
18. How knows any one that the Soul always thinks? For, if it be not a Self-evident Proposition, it needs Proof.
19. That

THE CONTENTS.

SECT.

19. That a Man should be busy in thinking, and yet not retain it the next Moment, very improbable.
 - 20-23. No Ideas but from Sensation or Reflection, evident, if we observe Children.
 24. The Original of all our Knowledge.
 25. In the Reception of simple Ideas, the Understanding is most of all passive.
-

C H A P. II.

Of Simple Ideas,

SECT.

1. Uncompounded Appearances.
 - 2, 3. The Mind can neither make nor destroy them.
-

C H A P. III.

Of Ideas of one Sense.

SECT.

1. As Colours, of Seeing; Sounds, of Hearing.
 2. Few simple Ideas have Names.
-

C H A P. IV.

Of Solidity.

SECT.

1. We receive this Idea from Touch.
2. Solidity fills Space.
3. Distinct from Space.
4. Hardness.
5. On Solidity depends Impulse, Resistance, and Protrusion.
6. What it is.

C H A P. V.

Of simple Ideas by more than one Sense.

C H A P. VI.

Of simple Ideas of Reflection.

SECT.

1. Are the Operations of the Mind about its other Ideas?
 2. The Idea of Perception, and Idea of Willing, we have from Reflection.
-

C H A P. VII.

Of simple Ideas, both of Sensation and Reflection.

SECT.

- 1-6. Pleasure and Pain.
 7. Existence and Unity.
 8. Power.
 9. Succession.
 10. Simple Ideas, the Materials of all our Knowledge.
-

C H A P. VIII.

Other Considerations concerning simple Ideas.

SECT.

- 1-6. Positive Ideas from private Causes.
- 7, 8. Ideas in the Mind, Qualities in Bodies.
- 9, 10. Primary and secondary Qualities.
- 11, 12. How primary Qualities produce their Ideas.
- 13, 14. How secondary.
- 15-22. Ideas of primary Qualities, are Resemblances; of Secondary, not.
23. Three Sorts of Qualities in Bodies.
- 24, 25. Rea-

T H E C O N T E N T S.

S E C T .

24, 25. *Reason of our Mistake in this.*

26. *Secondary Qualities two-fold; first, Immediately perceptible; secondly, Meditately perceptible.*

C H A P . IX.

Of Perception.

S E C T .

1. *It is the first simple Idea of Reflection.*

2-4. *Perception is only when the Mind receives the Impression.*

5, 6. *Children, tho' they have Ideas in the Womb, have none innate.*

7. *Which Ideas first, is not evident.*

8-10. *Ideas of Sensation often changed by the Judgment.*

11-14. *Perception puts the Difference between Animals and inferior Beings.*

15. *Perception the Inlet of Knowledge.*

C H A P . X.

Of Retention.

S E C T .

1. *Contemplation.*

2. *Memory.*

3. *Attention, Repetition, Pleasure and Pain, fix Ideas.*

4, 5. *Ideas fade in the Memory.*

6. *Constantly repeated Ideas can scarce be lost.*

7. *In remembering, the Mind is often active.*

8. *Two Defects in the Memory, Oblivion and Slowness.*

10. *Brutes have Memory.*

C H A P . XI.

Of Discerning, &c.

S E C T .

1. *No Knowledge without it.*

2. *The Difference of Wit and Judgment.*

3. *Clearness alone binders Confusion.*

4. *Comparing.*

5. *Brutes compare but imperfectly.*

6. *Compounding.*

7. *Brutes compound but little.*

8. *Naming.*

9. *Abstraction.*

10, 11. *Brutes abstract not.*

12, 13. *Idiots and mad Men.*

14. *Method.*

15. *These are the Beginnings of Human Knowledge.*

16. *Appeal to Experience.*

17. *Dark Room.*

C H A P . XII.

Of complex Ideas.

S E C T .

1. *Made by the Mind out of simple ones.*

2. *Made voluntarily.*

3. *Are either Modes, Substances, or Relations.*

4. *Modes.*

5. *Simple and mixed Modes.*

6. *Substances single or collective.*

7. *Relation.*

8. *The abstrusest Ideas from the two Sources.*

C H A P .

THE CONTENTS.

C H A P. XIII.

Of Space, and its simple Modes.

S E C T.

1. Simple Modes.
2. Idea of Space.
3. Space and Extension.
4. Imminency.
- 5, 6. Figure.
- 7-10. Place.
- 11-14. Extension and Body not the same.
15. The Definition of Extension explains it not.
16. Division of Beings into Bodies and Spirits, proves not Space and Body the same.
- 17, 18. Substance which we know not, no Proof against Space without Body.
- 19, 20. Substance and Accidents of little Use in Philosophy.
21. A Vacuum beyond the utmost Bounds of Body.
22. The Power of Annihilation proves a Vacuum.
23. Motion proves a Vacuum.
24. The Ideas of Space and Body distinct.
- 25, 26. Extension being inseparable from Body, proves it not the same.
27. Ideas of Space and Solidity distinct.
28. Men differ little in clear simple Ideas.

C H A P. XIV.

Of Duration, and its simple Modes.

S E C T.

1. Duration is fleeting Extension.

S E C T.

- 2-4. Its Idea from Reflection on the Train of our Ideas.
5. The Idea of Duration, applicable to Things whilst we sleep.
- 6-8. The Idea of Succession, not from Motion.
- 9-11. The Train of Ideas has a certain Degree of Quickness.
12. This Train, the Measure of other Successions.
- 13-15. The Mind cannot fix long on the invariable Idea.
16. Ideas, however made, include no Sense of Motion.
17. Time is Duration set out by Measures.
18. A good Measure of Time must divide its whole Duration into equal Periods.
19. The Revolutions of the Sun and Moon, the properest Measures of Time,
20. But not by their Motion, but periodical Appearances.
21. No two Parts of Duration can be certainly known to be equal.
22. Time not the Measure of Motion.
23. Minutes, Hours, and Years, not necessary Measures of Duration.
24. The Measure of Time two ways applied.
- 25-27. Our Measure of Time applicable to Duration before Time.
- 28-31. Eternity.

C H A P.

THE CONTENTS.

C H A P. XV.

Of Duration and Expansion considered together.

SECT.

1. Both capable of greater and less.
2. Expansion not bounded by Matter,
3. Nor Duration by Motion.
4. Why Men more easily admit infinite Duration, than infinite Expansion.
5. Time to Duration, is as Place to Expansion.
6. Time and Place are taken for so much of either, as are set out by the Existence and Motion of Bodies.
7. Sometimes for so much of either as we design by Measures taken from the Bulk or Motion of Bodies.
8. They belong to all Beings.
9. All the Parts of Extension, are Extension; and all the Parts of Duration, are Duration.
10. Their Parts inseparable.
11. Duration is as a Line, Expansion as a Solid.
12. Duration has never two Parts together, Expansion all together.

C H A P. XVI.

Of Number.

SECT.

1. Number, the simplest and

SECT.

- most universal Idea.
2. Its Modes made by Addition.
3. Each Mode distinct,
4. Therefore Demonstrations in Numbers the most precise.
- 5, 6. Names necessary to Numbers.
7. Why Children number not earlier.
8. Number measures all Measurables.

C H A P. XVII.

Of Infinity.

SECT.

1. Infinity, in its original Intention, attributed to Space, Duration, and Number.
- 2, 3. How we come by the Idea of Infinity.
4. Our Idea of Space boundless;
5. And so of Duration.
6. Why other Ideas are not capable of Infinity.
7. Difference between Infinity of Space, and Space infinite.
8. We have no Idea of infinite Space.
9. Number affords us the clearest Idea of Infinity.
- 10, 11. Our different Conception of the Infinity of Number, Duration, and Expansion.
12. Infinite Divisibility.
- 13, 14. No positive Idea of infinite.
- 15-19. What is positive, what negative

THE CONTENTS.

SECT.		SECT.
15.	negative in our Idea of Infinite.	5. Hatred.
16, 17.	We have no positive Idea of an infinite Duration.	6. Desire.
18.	No positive Idea of infinite Space.	7. Joy.
20.	Some think they have a positive Idea of Eternity, and not Space.	8. Sorrow.
21.	Supposed positive Ideas of Infinity, Cause of Mistakes.	9. Hope.
22.	All these Ideas from Sensation and Reflection.	10. Fear.
		11. Despair.
		12. Anger.
		13. Envy.
		14. What Passions all Men have.
		15, 16. Pleasure and Pain, what.
		17. Shame.
		18. The Instance to shew how our Idea of the Passions are got from Sensation and Reflection.

C H A P. XVIII.

Of other simple Modes.

SECT.	
1, 2.	Modes of Motion.
3.	Modes of Sounds.
4.	Modes of Colours.
5.	Modes of Tastes.
6.	Some simple Modes have no Names.
7.	Why some Modes have, and others have not Names.

C H A P. XIX.

Of the Modes of Thinking.

SECT.	
1, 2.	Sensation, Remembrance, Contemplation, &c.
3.	The various Attention of the Mind in Thinking.
4.	Hence probable that Thinking is the Action, not Essence of the Soul.

C H A P. XX.

Of Modes of Pleasure and Pain.

SECT.	
1.	Pleasure and Pain simple Ideas.
2.	Good and Evil, what.
3.	Our Passions moved by Good and Evil.
4.	Love.

C H A P. XXI.

Of Power.

SECT.	
1.	This Idea, how got.
2.	Power, active and passive.
3.	Power includes Relation.
4.	The clearest Idea of active Power, had from Spirit.
5.	Will and Understanding, two Powers.
6.	Faculties.
7.	Whence the Ideas of Liberty and Necessity.
8.	Liberty, what.
9.	Supposes Understanding, and Will.
10.	Belongs not to Volition.
11.	Voluntary opposed to involuntary, not to necessary.
12.	Liberty, what.
13.	Necessity, what.
14-20.	Liberty belongs not to the Will,
21.	But to the Agent, or Man.
22-24.	In respect of Willing, a Man is not free.
25, 26, 27.	The Will determined by something without it.
28.	Volition, what.
29.	What determines the Will.
30.	Will

THE CONTENTS.

SECT.	SECT.
30. Will and Desire must not be confounded.	51. The Necessity of pursuing true Happiness, the Foundation of all Liberty.
31. Uneasiness determines the Will.	52. The Reason of it.
32. Desire is Uneasiness.	53. Government of our Passions, the right Improvement of Liberty.
33. The Uneasiness of Desire determines the Will;	54, 55. How Men come to pursue different Courses.
34. This the Spring of Action.	56. How Men come to chuse ill.
35. The greatest positive Good determines not the Will, but Uneasiness;	57. First, from bodily Pains. Secondly, from wrong Desires arising from wrong Judgment.
36. Because the Removal of Uneasiness is the first Step to Happiness;	58, 59. Our Judgment of present Good or Evil, always right,
37. Because Uneasiness alone is present;	60. From a wrong Judgment of what makes a necessary Part of their Happiness.
38. Because all, who allow the Joys of Heaven possible, pursue them not. But a great Uneasiness is never neglected.	61, 62. A more particular Account of wrong Judgments,
39. Desire accompanies all Uneasiness.	63. In comparing present and future.
40. The most pressing Uneasiness naturally determines the Will.	64, 65. Causes of this.
41. All desire Happiness.	66. In considering Consequences of Actions.
42. Happiness, what.	67. Causes of this.
43. What Good is desired, what not.	68. Wrong Judgment of what is necessary to our Happiness.
44. Why the greatest Good is not always desired.	69. We can change the Agreeableness or Disagreeableness in Things.
45. Why, not being desired, it moves not the Will.	70. Preference of Vice to Virtue, a manifest wrong Judgment.
46. Due Consideration raises Desire.	71, 72, 73. Recapitulation.
47. The Power to suspend the Prosecution of any Desire, makes way for Consideration.	
48. To be determined by our own Judgment, is no Restraint to Liberty.	
49. The freest Agents are so determined.	
50. A constant Determination to a Pursuit of Happiness, no Abridgment of Liberty.

O F

HUMAN UNDERSTANDING.

BOOK I. CHAP. I.

INTRODUCTION.

§ 1. SINCE it is the *Understanding* that sets Man above the rest of sensible Beings, and gives him all the Advantage and Dominion which he has over them; it is certainly a Subject, even for its Nobleness, worth our Labour to enquire into. The Understanding, like the Eye, whilst it makes us see and perceive all other Things, takes no Notice of itself: And it requires Art and Pains to set it at a Distance, and make it its own Object. But whatever be the Difficulties that lie in the Way of this Enquiry; whatever it be that keeps us so much in the Dark ourselves; sure I am, that all the Light we can let in upon our own Minds, all the Acquaintance we can make with our own Understandings, will not only be very pleasant, but bring us great Advantage, in directing our Thoughts in the Search of other Things.

§ 2. THIS, therefore, being my *Purpose*, to *Design*. enquire into the Original, Certainty, and Extent of Human Knowledge; together with the Grounds and Degrees of Belief, Opinion, and Assent; I shall not at present meddle with the Physical Consideration of the Mind; or trouble myself to examine wherein its Essence consists, or by what Motions of our Spirits, or Alteration of our Bodies, we come to have any Sensation by our Organs, or any *Ideas* in our Understandings; and whether those *Ideas* do in their Formation, any, or all of them, depend on Matter or no. These are Speculations, which, however curious and entertaining, I shall decline, as lying out of my Way in the Design I am now upon. It shall suffice to my present Purpose, to consider the discerning Faculties of a Man, as they are employ'd about the Objects, which they have to do with: And I shall imagine,

gine, I have not wholly mis-employed myself in the Thoughts I shall have on this Occasion, if, in this historical, plain Method, I can give any Account of the Ways whereby our Understandings come to attain those Notions of Things we have, and can set down any Measures of the Certainty of our Knowledge, or the Grounds of those Persuasions, which are to be found amongst Men, so various, different, and wholly contradictory; and yet asserted, somewhere or other, with such Assurance and Confidence, that he, that shall take a View of the Opinions of Mankind, observe their Opposition, and at the same time consider the Fondness and Devotion wherewith they are embraced, the Resolution and Eagerness wherewith they are maintain'd, may perhaps have Reason to suspect, that either there is no such thing as Truth at all; or that Mankind hath no sufficient Means to attain a certain Knowledge of it.

Method. §. 3. It is therefore worth while to search out the *Bounds* between Opinion and Knowledge; and examine by what Measures, in Things, whereof we have no certain Knowledge, we ought to regulate our Assent, and moderate our Persuasions. In order whereunto, I shall pursue this following Method.

First, I SHALL enquire into the *Original* of those *Ideas*, *Notions*, or whatever else you please to call them, which a Man observes, and is conscious to himself he has in his Mind; and the *Ways* whereby the Understanding comes to be furnished with them.

Secondly, I SHALL endeavour to shew, what *Knowledge* the Understanding hath by those *Ideas*; and the *Certainty*, *Evidence*, and *Extent* of it.

Thirdly, I SHALL make some Enquiry into the *Nature* and *Grounds* of *Faith* or *Opinion*; whereby I mean that *Affent*, which we give to any Proposition as true, of whose *Truth* yet we have no certain *Knowledge*: And here we shall have Occasion to examine the Reasons and Degrees of *Affent*.

Useful to know the Extent of our Comprehension. §. 4. If, by this Enquiry into the *Nature* of the Understanding, I can discover the Powers thereof; how far they reach; to what *Things* they are in any degree proportionate; and where they

they fail us: I suppose it may be of use, to prevail with the busy Mind of Man to be more cautious in meddling with Things exceeding its Comprehension; to stop when it is at the utmost Extent of its Tether; and to sit down in a quiet Ignorance of those Things, which, upon Examination, are found to be beyond the reach of our Capacities. We should not then perhaps be so forward, out of Affectation of an universal Knowledge, to raise Questions, and perplex ourselves and others with Disputes about Things, to which our Understandings are not suited; and of which we cannot frame in our Minds any clear or distinct Perceptions, or whereof (as it has perhaps too often happen'd) we have not any Notions at all. If we can find out, how far the Understanding can extend its View; how far it has Faculties to attain Certainty; and in what Cases it can only judge and guess; we may learn to content ourselves with what is attainable by us in this State.

§. 5. For, tho' the *Comprehension* of our Understandings comes exceeding short of the vast Extent of Things; yet we shall have Cause enough to magnify the bountiful Author of our Being, for that Proportion and Degree of Knowledge he has bestowed on us, so far above all the rest of the Inhabitants of this our Mansion. Men have Reason to be well satisfied with what God hath thought fit for them, since he has given them (as St. Peter says) πάντα πρός λαθούσι εἰσιθεῖαν, Whatsoever is necessary for the Conveniencies of Life, and Information of Virtue; and has put, within the reach of their Discovery, the comfortable Provision for this Life, and the Way that leads to a better. How short soever their Knowledge may come, of an universal or perfect Comprehension of whatsoever is, it yet secures their great Concernments, that they have Light enough to lead them to the Knowledge of their Maker, and the Sight of their own Duties. Men may find Matter sufficient to busy their Heads, and employ their Hands with Variety, Delight and Satisfaction; if they will not boldly quarrel with their own Constitution, and throw away the Blessings their Hands are filled with, because they are not big enough to grasp every thing. We shall not have much Reason to complain

*Our Capacity
suited to our
State and
Concerns.*

plain of the Narrowness of our Minds, if we will but employ them about what may be of use to us; for of that they are very capable: And it will be an unpardonable, as well as childish Peevishness, if we undervalue the Advantages of our Knowledge, and neglect to improve it, to the Ends for which it was given us, because there are some things that are set out of the reach of it. It will be no Excuse to an idle and untoward Servant, who would not attend his Business by Candle-light, to plead that he had not bright Sun-shine. The Candle, that is set up in us, shines bright enough for all our Purposes. The Discoveries we can make with this, ought to satisfie us: And we shall then use our Understandings right, when we entertain all Objects in that Way and Proportion, that they are suited to our Faculties; and upon those Grounds they are capable of being proposed to us; and not peremptorily, or intemperately require Demonstration, and demand Certainty, where Probability only is to be had, and which is sufficient to govern all our Concernments. If we will disbelieve every Thing, because we cannot certainly know all Things; we shall do much about as wisely as he, who would not use his Legs, but sit still and perish, because he had no Wings to fly.

*Knowledge of
our Capacity,
a Cure of
Scepticism and
Idleness.*

§. 6. WHEN we know our own *Strength*, we shall the better know what to undertake with Hopes of Success: And when we have well surveyed the *Powers* of our own Minds, and made some Estimate what we may expect from them, we shall not be inclined either to sit still, and not set our Thoughts on Work at all, in despair of knowing any Thing; nor, on the other Side, question every Thing, and disclaim all Knowledge, because some Things are not to be understood. 'Tis of great Use to the Sailor to know the Length of his Line, tho' he cannot with it fathom all the Depths of the Ocean. 'Tis well he knows, that it is long enough to reach the Bottom, at such Places as are necessary to direct his Voyage, and caution him against running upon Shoals that may ruin him. Our Business here is not to know all Things, but those which concern our Conduet. If we can find out those Measures, whereby a rational Creature, put in that State which Man is in, in this World, may, and ought to govern his Opinions

Opinions and Actions depending thereon, we need not be troubled that some other Things escape our Knowledge.

§. 7. THIS was that which gave the first *Rise* to this *Essay* concerning the *Understanding*. For I thought that the first Step towards satisfying several Enquiries, the Mind of Man was very apt to run into, was, to take a Survey of our own Understandings, examine our own Powers, and see to what Things they were adapted. 'Till that was done, I suspected we began at the wrong End, and in vain sought for Satisfaction in a quiet and sure Possession of Truths that most concern'd us, whilst we let loose our Thoughts into the vast Ocean of *Being*, as if all that boundless Extent were the natural and undoubted Possession of our Understandings, wherein there was nothing exempt from its Decisions, or that escaped its Comprehension. Thus Men extending their Enquiries beyond their Capacities, and letting their Thoughts wander into those Depths, where they can find no sure Footing; 'tis no wonder, that they raise Questions and multiply Disputes, which never coming to any clear Resolution, are proper only to continue and increase their Doubts, and to confirm them at last in perfect Scepticism. Whereas were the Capacities of our Understandings well considered, the Extent of our Knowledge once discovered, and the Horizon found, which sets the Bounds between the enlightened and dark Parts of Things; between what is, and what is not comprehensible by us; Men would perhaps with less Scruple, acquiesce in the avow'd Ignorance of the one, and employ their Thoughts and Discourse with more Advantage and Satisfaction in the other.

§. 8. THUS much I thought necessary to say concerning the Occasion of this Enquiry into *Human Understanding*. But, before I proceed on to what I have thought on this Subject, I must here in the Entrance beg pardon of my Reader for the frequent Use of the Word *Idea*, which he will find in the following Treatise. It being that Term, which, I think, serves best to stand for whatsoever is the Object of the Understanding, when a Man thinks; I have used it to express whatever is meant by *Phantasm*, *Notion*,

*Occasion of
this Essay.*

*What Idea
stands for.*

Species, or whatever it is which the Mind can be employed about in thinking; and I could not avoid frequently using it. (1)

I PRESUME it will be easily granted me, that there are such *Ideas* in Mens Minds; every one is conscious of them in himself, and Mens Words and Actions will satisfy him that they are in others.

OUR first Enquiry then shall be, how they come into the Mind.

C H A P.

(1) THIS modest Apology of our Author could not procure him the free Use of the Word *Idea*. But great Offence has been taken at it, and it has been censured as of dangerous Consequence: To which * Answer to you may here see what he answers. ‘The World,’
Mr. Locke’s faith the * Bishop of Worcester, ‘hath been strange-
First Letter, ‘ly amused with *Ideas* of late; and we have been
 P. 93. ‘told, that strange Things might be done, by the
 ‘Help of *Ideas*; and yet these *Ideas*, at last, come to
 ‘be only common Notions of Things, which we must make use of in
 ‘our Reasoning. You (i. e. the Author of the *Essay* concerning *Human Understanding*) say, in that Chapter [about the Existence of
 ‘God, you thought it most proper to express yourself, in the most u-
 ‘sual and familiar Way, by common Words and Expressions. I
 ‘would you had done so quite through your Book; for then you had
 ‘never given that Occasion to the Enemies of our Faith, to take up
 ‘your new Way of *Ideas*, as an effectual Battery (as they imagin’d)
 ‘against the Mysteries of the Christian Faith. But you might have
 ‘enjoy’d the Satisfaction of your *Ideas*, long enough, before I had ta-
 ‘ken notice of them, unless I had found them employed about doing
 ‘Mischief.’

(†) In his Se-
 cond Letter to
 the Bishop of
 Worcester,
 p. 93, &c.

To which our Author (†) replies, ‘Tis plain, that That which your Lordship apprehends, in my Book, may be of dangerous Consequence to the Article which your Lordship has endeavoured to defend, is my introducing *new Terms*; and that which your Lordship instances in, is that of *Ideas*. And the Reason your Lordship gives, in every of these Places, why your Lordship has such an Apprehension of *Ideas*, as that they may be of dangerous Consequence to that Article of Faith, which your Lordship has endeavoured to defend, is, because they have been applied to such Purposes. And I might (your Lordship says) have enjoyed the Satisfaction of my *Ideas*, long enough, before you had taken notice of them, unless your Lordship had found them employed in doing Mischief. Which, at last, as I humbly conceive, amounts to thus much, and no more, viz. That your Lordship fears *Ideas*, i. e. the Term *Ideas*, may, sometime or other, prove of very dangerous Consequence to what your Lordship has endeavoured to defend, because they have been

been made use of in arguing against it. For I am sure your Lordship does not mean, that you apprehend the Things, signified by *Ideas*, may be of dangerous Consequence to the Article of Faith your Lordship endeavours to defend, because they have been made use of against it: For (besides that your Lordship mentions *Terms*) that would be to expect that those, who oppose that Article, should oppose it, without any Thoughts; for the Thing signified by *Ideas*, is nothing but the immediate Object of our Minds, in thinking: So that, unless any one can oppose the Article your Lordship defends, without thinking on something, he must use the Things signified by *Ideas*; for he that thinks, must have some immediate Object of his Mind in thinking: *i. e.* must have *Ideas*.

BUT whether it be the Name, or the Thing; *Ideas* in Sound, or *Ideas* in Signification, that your Lordship apprehends *may be of dangerous Consequence to that Article of Faith, which your Lordship endeavours to defend*; it seems to me, I will not say a *New Way of Reasoning*, (for that belongs to me) but were it not your Lordship's, I should think it a very extraordinary *Way of Reasoning*, to write against a Book, wherein your Lordship acknowledges, they are not used to bad Purposes, nor employed to do Mischief; only, because you find that *Ideas* are, by those who oppose your Lordship, *employed to do Mischief*; and so apprehend, *they may be of dangerous Consequence to the Article your Lordship has engaged in the Defence of*. For whether *Ideas*, as *Terms*, or *Ideas*, as the immediate Objects of the Mind, signified by those *Terms*, may be, in your Lordship's Apprehension, *of dangerous Consequence to that Article*; I do not see how your Lordship's writing against the *Notion of Ideas*, as stated in my Book, will at all hinder your Opposers from employing them in doing Mischief, as before.

HOWEVER, be that as it will, so it is, that your Lordship apprehends these *New Terms*, these *Ideas*, *with which the World hath, of late, been so strangely amused* (*tho' at last they come to be only common Notions of Things*, as your Lordship owns) *may be of dangerous Consequence to that Article*.

My Lord, if any, in their Answer to your Lordship's *Sermons*, and, in their other *Pamphlets*, wherein your Lordship complains they have talk'd so much of *Ideas*, have been troublesome to your Lordship with that *Term*; it is not strange, that your Lordship should be tired with that Sound: But how natural soever it be to our weak Constitutions, to be offended with any Sound, wherewith an importunate Din hath been made about our Ears; yet, my Lord, I know your Lordship has a better Opinion of the Articles of our Faith, than to think any of them can be overturn'd, or so much as shaken, with a Breath, formed into any Sound, or *Term* whatsoever.

NAMES are but the arbitrary Marks of Conceptions; and so they be sufficiently appropriated to them, in their Use, I know no other Difference any of them have, in particular, but as they are of easy or difficult Pronunciation, and of a more or less pleasant Sound; and what particular Antipathies there may be in Men, to some of them, upon

on that Account, is not easy to be foreseen. This I am sure, no *Term* whatsoever in itself bears, one more than another, any Opposition to Truth of any Kind; they are only Propositions that do, or can, oppose the Truth of any Article or Doctrine: And thus no *Term* is priviledg'd from being set in Opposition to Truth.

THERE is no Word to be found, which may not be brought into a Proposition, wherein the most sacred and most evident Truths may be opposed; but that is not a Fault in the *Term*, but him that uses it. And, therefore, I cannot easily persuade myself (whatever your Lordship hath said, in the Heat of your Concern) that you have bestowed so much Pains upon my Book, because the Word *Idea* is so much used there. For tho' upon my laying, in my Chapter about the Existence of God, 'That I scarce used the Word *Idea* in that whole Chapter;' your Lordship wishes, that *I had done so quite through my Book*: Yet I must rather look upon that as a Compliment to me, wherein your Lordship wished, that my Book had been, all through, suited to vulgar Readers, not used to that, and the like *Terms*, than that your Lordship has such an Apprehension of the Word *Idea*; or that there is any such Harm in the Use of it, instead of the Word *Notion*, (with which your Lordship seems to take it to agree in Signification) that your Lordship would think it worth your while to spend any Part of your valuable Time and Thoughts about my Book, for having the Word *Idea* so often in it; for this would be to make your Lordship to write only against an Impropriety of Speech. I own to your Lordship, it is a great Condescension in your Lordship to have done it, if that Word have such a Share in what your Lordship has writ against my Book, as some Expressions would persuade one; and I would, for the Satisfaction of your Lordship, change the *Term* of *Idea* for a better, if your Lordship, or any one, could help me to it. For, that *Notion* will not so well stand for every immediate Object of the Mind, in Thinking, as *Idea* does, I have (as I guess) somewhere given a Reason in my Book, by shewing that the Term *Notion* is more peculiarly appropriated to a certain Sort of those Objects, which I call mixed Modes: And, I think, it would not stand altogether so well, to say, the *Notion of Red*, and the *Notion of a Horse*; as the *Idea of Red*, and the *Idea of a Horse*. But if any one thinks it will, I contend not; for I have no Fondness for, no Antipathy to any particular articulate Sounds: Nor do I think there is any Spell or Fascination in any of them.

BUT the Word *Idea*, proper or improper, I do not see how it is the better, or worse, because *Ill-men* have made use of it, or because it has been made use of to *bad Purposes*: For if that be a Reason to condemn, or lay it by, we must lay by the Terms, *Scripture*, *Reason*, *Perception*, *Distinct*, *Clear*, &c. Nay, the Name of *God* himself will not escape: For I do not think any one of these, or any other Term, can be produced, which hath not been made use of by such Men, and to such Purposes. And therefore, if the Unitarians, in their late Pamphlets, have talked very much of, and strangely amused the World with *Ideas*; I cannot believe your Lordship will think that Word one Jot the worse, or the more dangerous, because they use it; any more than, for

for their Use of them, you will think Reason or Scripture Terms ill or dangerous. And therefore what your Lordship says in the Bottom of this 93d Page, that *I might have enjoyed the Satisfaction of my Ideas long enough before your Lordship had taken notice of them*, unless you had found them employed in doing Mischief; will, I presume, when your Lordship has considered again of this Matter, prevail with your Lordship, to let me enjoy still the Satisfaction I take in my Ideas, i. e. as much Satisfaction as I can take in so small a Matter, as is the using of a proper Term, notwithstanding it should be employed by others in doing Mischief.

FOR, my Lord, if I should leave it wholly out of my Book, and substitute the Word *Notion* every where in the room of it; and every body else do so too, (tho' your Lordship does not, I suppose, suspect, that I have the Vanity to think they would follow my Example) my Book would, it seems, be the more to your Lordship's liking; but I do not see how this would one Jot abate the *Mischief* your Lordship complains of. For the *Unitarians* might as much employ *Notions*, as they do now *Ideas*, to do *Mischief*; unless they are such Fools as think they can conjure with this notable Word *Idea*; and that the Force of what they say, lies in the Sound, and not in the Signification of their Terms.

THIS I am sure of, that the Truths of the Christian Religion can be no more batter'd by one Word than another; nor can they be beaten down or endangered by any Sound whatsoever. And I am apt to flatter myself, that your Lordship is satisfied, there is no Harm in the Word *Ideas*, because you say, you should not have taken any Notice of my *Ideas*, if the *Enemies of our Faith had not taken up my new Way of Ideas, as an effectual Battery against the Mysteries of the Christian Faith*. In which Place, by *new Way of Ideas*, nothing, I think, can be construed to be meant, but my expressing myself by that of *Ideas*; and not by other more common Words, and of antienter standing in the *English* Language.

As to the Objection, if the Author's Way by *Ideas*, being a *new Way*, He thus answers: *My new Way of Ideas, or my Way by Ideas*, which often occurs in your Lordship's Letter, is, I confess, a very large and doubtful Expression; and may, in the full Latitude, comprehend my whole *Essay*; because treating of the *Understanding*, which is nothing but the Faculty of Thinking, I could not well treat of that Faculty of the Mind, which consists in Thinking, without considering the immediate Objects of the Mind, in Thinking, which I call *Ideas*: And therefore in treating of the *Understanding*, I guess it will not be thought strange, that the greatest Part of my Book has been taken up, in considering what these Objects of the Mind, in Thinking, are; whence they come; what Use the Mind makes of them, in its several Ways of Thinking; and what are the outward Marks whereby it signifies them to others, or records them for its own Use. And this, in short, is *my Way by Ideas*, that which your Lordship calls *my new Way by Ideas*: Which, my Lord, if it be *new*, it is but a new History of an old Thing. For I think it will not be doubted, that Men always performed the Actions of *Thinking, Reasoning, Believing, and Knowing*,

just after the same Manner they do now: Tho', whether the same Account has heretofore been given of the Way, how they performed these Actions, or wherein they consisted, I do not know. Were I as well read as your Lordship, I should have been safe from that gentle Reprimand of your Lordship's, for thinking *my Way of Ideas NEW*, for want of looking into other Men's Thoughts, which appear in their Books.

YOUR Lordship's Words, as an Acknowledgment of your Instructions in the Case, and as a Warning to others, who will be so bold Adventurers as to spin any Thing barely out of their own Thoughts, I shall set down at large; and they run thus: *Whether you took this Way of Ideas from the modern Philosopher, mention'd by you, is not at all material; but I intended no Reflection upon you in it (for that you mean by my commanding you as a Scholar of so great a Master) I never meant to take from you the Honour of your own Inventions: And I do believe you when you say, That you wrote from your own Thoughts, and the Ideas you had there. But many Things may seem New to one, who converses only with his own Thoughts, which really are not so; as he may find, when he looks into the Thoughts of other Men, which appear in their Books. And therefore, altho' I have a just Esteem for the Invention of such who can spin Volumes barely out of their own Thoughts, yet I am apt to think, they would oblige the World more, if, after they have thought so much themselves, they would examine what Thoughts others have had before them, concerning the same Things; that so those may not be thought their own Inventions, which are common to themselves and others. If a Man should try all the magnetical Experiments himself, and publish them as his own Thoughts, he might take himself to be the Inventor of them: But he that examines and compares them with what Gibbert, and others have done before him, will not diminish the Praise of his Diligence, but may wish he had compared his Thoughts with other Men's; by which the World would receive greater Advantage, altho' he had lost the Honour of being an Original.*

To alleviate my Fault herein, I agree with your Lordship, that many Things may seem NEW, to one that converses only with his own Thoughts, which really are not so: But I must crave leave to suggest to your Lordship, that if, in spinning them out of his own Thoughts, they seem new to him, he is certainly the Inventor of them; and they may as justly be thought his own Invention, as any one's; and he is as certainly the Inventor of them, as any one who thought on them before him: The Distinction of Invention, or not Invention, lying not in thinking first, or not first, but in borrowing, or not borrowing our Thoughts from another: And he to whom, spinning them out of his own Thoughts, they seem new, could not certainly borrow them from another. So he truly invented Printing in Europe, who, without any Communication with the Chinese, spun it out of his own Thoughts; tho' it was ever so true, that the Chinese had the Use of Printing, nay, of Printing in the very same Way, among them, many Ages before him. So that he, that Spins any Thing out of his own Thoughts, that seems new to him, cannot cease to think it his own Invention, should he examine ever so far, what Thoughts others have had before him;

him, concerning the same Thing, and should find by examining, that they had the same Thoughts too.

BUT what great *Obligation* this would be to the World, or weighty Cause of turning over and looking into Books; I confess I do not see. The great End to me, in conversing with my own, or other Men's Thoughts, in Matters of Speculation, is to find Truth, without being much concerned whether my own spinning of it out of mine, or their spinning of it out of their own Thoughts, helps me to it. And how little I affect the *Honour of an Original*, may be seen in that Place of my Book, where, if any where, that Itch of Vain-Glory was likeliest to have shewn itself, had I been so over-run with it as to need a Cure. It is where I speak of Certainty, in these following Words, taken Notice of by your Lordship, in another Place: 'I think I have shewn wherein it is that Certainty, real Certainty consists, which, whatever it was to others, was, I confess, to me heretofore, one of those *Desiderata*, which I found great want of.'

HERE, my Lord, however *New* this seem'd to me, and the more so, because possibly I had in vain hunted for it in the *Books of others*; yet I spoke of it as *New*, only to myself; leaving *others* in the undisturbed Possession of what, either by Invention or Reading, was theirs before; without assuming to myself any other Honour, but that of my own Ignorance, 'till that Time, if others before had shewn wherein Certainty lay. And yet, my Lord, if I had, upon this Occasion, been forward to assume to myself the *Honour of an Original*, I think I had been pretty safe in it; since I should have had your Lordship for my Guarantee and *Vindicator* in that Point, who are pleased to call it *New*; and, as such, to write against it.

AND truly, my Lord, in this respect, my Book has had very unlucky Stars, since it hath had the Misfortune to displease your Lordship, with many Things in it, for their Novelty; as a new *Way of Reasoning*; new *Hypothesis about Reason*; new *Sort of Certainty*; new *Terms*; new *Way of Ideas*; new *Method of Certainty*, &c. And yet in other Places, your Lordship seems to think it worthy in me of your Lordship's Reflection, for saying, but what others have said before. As where I say, 'In the different Make of Men's Tempers, and Application of their Thoughts, some Arguments prevail more on one, and some on another, for the Confirmation of the same Truth.' Your Lordship asks, *What is this different from what all Men of Understanding have said?* Again, I take it, your Lordship meant not these Words for the Commendation of my Book, where you say, *But if no more be meant by, 'The simple Ideas that came in by Sensation, or Reflection, and their being the Foundation of our Knowledge,' but that our Notions of Things come in, either from our Senses, or the Exercise of our Minds; as there is nothing extraordinary in the Discovery, so your Lordship is far enough from opposing that, wherein you think all Mankind are agreed.*

AND again, *But what need all this great Noise about Ideas and Certainty, true and real Certainty by Ideas; if, after all, it comes only to this, that our Ideas only represent to us such Things, from whence we bring Arguments to prove the Truth of Things?*

BUT, *The World hath been strangely amused with Ideas of late; and we have been told, that strange Things might be done by the Help of Ideas; and yet these Ideas, at last, come to be only common Notions of Things, which we must make use of in our Reasoning.* And to the like Purpose in other Places.

WHETHER, therefore, at last, your Lordship will resolve that it is *New* or not; or more faulty by its being *New*, must be left to your Lordship. This I find by it, that my Book cannot avoid being condemned on the one Side, or the other; nor do I see a Possibility to help it. If there be Readers that like only *New* Thoughts; or, on the other side, others that can bear nothing but what can be justified by received Authorities in Print; I must desire them to make themselves amends in that Part which they like, for the Displeasure they receive in the other: But if many should be so exact, as to find fault with both, truly, I know not well what to say to them. The Case is a plain Case, the Book is all over naught, and there is not a Sentence in it, that is not, either for its Antiquity or Novelty, to be condemned; and so there is a short End of it. From your Lordship, indeed, in particular, I can hope for something better; for your Lordship thinks the general Design of it so good, that That, I flatter myself, would prevail on your Lordship to preserve it from the Fire.

BUT as to the Way, your Lordship thinks, I should have taken to prevent the *having it thought my Invention, when it was common to me with others,* it unluckily so fell out, in the Subject of my *Essay of Human Understanding*, that I could not look into the Thoughts of other Men to inform myself. For my Design being, as well as I could, to copy Nature, and to give an Account of the Operations of the Mind in Thinking; I could look into no body's Understanding but my own, to see how it wrought; nor have a Prospect into other Men's Minds, to view their Thoughts there; and observe what Steps and Motions they took, and by what Gradations they proceeded in their acquainting themselves with Truth, and their Advance to Knowledge: What we find of their Thoughts in Books, is but the Result of this, and not the Progress and Working of their Minds, in coming to the Opinions or Conclusions they set down and publish.

ALL, therefore, that I can say of my Book, is, That it is a Copy of my own Mind, in its several Ways of Operation. And all that I can say for the Publishing of it, is, That I think the Intellectual Faculties are made, and operate alike in most Men; and that some, that I shewed it to before I published it, liked it so well, that I was confirmed in that Opinion. And therefore, if it should happen, that it should not be so, but that some Men should have Ways of Thinking, Reasoning, or Arriving at Certainty, different from others, and above those that I find my Mind to use and acquiesce in, I do not see of what Use my Book can be to them. I can only make it my humble Request, in my own Name, and in the Name of those, who are of my Size, who find their Minds work, reason, and know in the same low Way that mine does, that those Men of a more happy Genius, would shew us the Way of their nobler Flights; and particularly would

would discover to us their shorter or surer Way to Certainty, than by Ideas, and the observing their Agreement or Disagreement.

YOUR Lordship adds, *But now it seems, nothing is intelligible but what suits with the new Way of Ideas.* My Lord, the new Way of Ideas, and the old Way of speaking Intelligibly (†) was always, and ever will be the same: And if I may take the Liberty to declare my Sense of it, herein it consists: 1. That a Man use no Words, but such as he makes the Signs of certain determined Objects of his Mind in Thinking, which he can make known to another. 2. Next, That he use the same Word steadily, for the Sign of the same immediate Object of his Mind in Thinking. 3. That he join these Words together in Propositions, according to the Grammatical Rules of that Language he speaks in. 4. That he unite those Sentences in a coherent Discourse. Thus, and thus only, I humbly conceive, any one may preserve himself from the Confines and Suspicion of Jargon, whether he pleases to call those immediate Objects of his Mind, which his Words do, or should stand for, Ideas or no.

† Mr. Locke's
Third Letter
to the Bishop
of Worcester,
pag. 353, &c.

C H A P II.

No Innate Principles in the Mind.

§. 1. **I**T is an established Opinion amongst some Men, that there are in the Understanding certain Innate Principles; some Primary Notions, *Konciæ innotæ*, Characters, as it were, stamped upon the Mind of Man, which the Soul receives in its very first Being, and brings into the World with it. It would be sufficient to convince unprejudiced Readers of the Falseness of this Supposition, if I should only shew (as I hope I shall in the following Parts of this Discourse) how Men, barely by the Use of their natural Faculties, may attain to all the Knowledge they have, without the Help of any Innate Impressions; and may arrive at Certainty, without any such Original Notions, or Principles. For I imagine any one will easily grant, That it would be impertinent to suppose, the Ideas of Colours Innate in a Creature, to whom God hath given Sight, and a Power to receive them by the Eyes, from external Objects: And no less unreasonable would it be, to attribute several Truths to the Impres-

The Way
shewn how we
come by any
Knowledge,
sufficient
to prove it
not Innate.

sions of Nature, and Innate Characters, when we may observe in ourselves Faculties fit to attain as easy and certain Knowledge of them, as if they were originally imprinted on the Mind.

But because a Man is not permitted without Censure, to follow his own Thoughts in the Search of Truth, when they lead him ever so little out of the common Road; I shall set down the Reasons that made me doubt of the Truth of that Opinion, as an Excuse for my Mistake, if I be in one; which I leave to be considered by those, who, with me, dispose themselves to embrace Truth, wherever they find it.

General Assent §. 2. THERE is nothing more commonly taken for granted, than that there are certain Principles, both *Speculative* and *Practical*, (for they speak of both) universally agreed upon by all Mankind; which therefore, they argue, must needs be constant Impressions, which the Souls of Men receive in their first Beings, and which they bring into the World with them, as necessarily and really as they do any of their inherent Faculties.

Universal Consent proves nothing Innate. §. 3. THIS Argument, drawn from *Universal Consent*, has this Misfortune in it, that if it were true in Matter of Fact, that there were certain Truths, wherein all Mankind agreed, it would not prove them Innate, if there can be any other Way shewn, how Men may come to that Universal Agreement, in the Things they do consent in; which I presume may be done.

What is, is;
and, It is im-
possible for the
same Thing to
be, and not to
be, *not univer-*
versally assent-
ed to.

§. 4. BUT, which is worse, this Argument of Universal Consent, which is made use of to prove Innate Principles, seems to me a Demonstration that there are none such; because there are none to which all Mankind give an Universal Assent. I shall begin with the Speculative, and instance in those magnified Principles of Demonstration; *Whatsoever is, is;* and, *'Tis impossible for the same Thing to be, and not to be;* which, of all others, I think, have the most allowed Title to Innate. These have so settled a Reputation of Maxims universally received, that 'twill, no doubt, be thought strange, if any one should seem to question it. But yet

yet I take liberty to say, that these Propositions are so far from having an Universal Assent, that there are a great Part of Mankind, to whom they are not so much as known.

§. 5. For, first, 'tis evident, that all *Children* and *Ideots* have not the least Apprehension or Thought of them; and the want of that is enough to destroy that Universal Assent, which must needs be the necessary Concomitant of all Innate Truths: It seeming to me near a Contradiction to say, that there are Truths imprinted on the Soul, which it perceives or understands not: Imprinting, if it signify any thing, being nothing else, but the making certain Truths to be perceived. For to imprint any Thing on the Mind, without the Mind's perceiving it, seems to me hardly intelligible. If therefore *Children* and *Ideots* have Souls, have Minds, with those Impressions upon them, they must unavoidably perceive them, and necessarily know and assent to these Truths; which since they do not, it is evident that there are no such Impressions. For if they are not Notions naturally imprinted, How can they be Innate? And if they are Notions imprinted, How can they be unknown? To say a Notion is imprinted on the Mind, and yet at the same time to say, that the Mind is ignorant of it, and never yet took notice of it, is to make this Impression nothing. No Proposition can be said to be in the Mind, which it never yet knew, which it was never yet conscious of. For if any one may, then, by the same Reason, all Propositions that are true, and the Mind is capable of ever assenting to, may be said to be in the Mind, and to be imprinted: Since, if any one can be said to be in the Mind, which it never yet knew, it must be only, because it is capable of knowing it; and so the Mind is, of all Truths it ever shall know. Nay, thus Truths may be imprinted on the Mind, which it never did, nor ever shall know: For a Man may live long, and die at last in Ignorance of many Truths, which his Mind was capable of knowing, and that with Certainty. So that, if the Capacity of knowing, be the natural Impression contended for, all the Truths a Man ever comes to know, will, by this Account, be every one of them Innate;

*Not on the
Mind natural-
ly imprinted, be-
cause not known
to Children, I-
deots, &c.*

and

and this great Point will amount to no more, but only to a very improper Way of speaking; which, whilst it pretends to assert the contrary, says nothing different from those who deny Innate Principles. For no body, I think, ever denied that the Mind was capable of knowing several Truths. The Capacity, they say, is Innate, the Knowledge acquired. But then, to what End such Content for certain Innate Maxims? If Truths can be imprinted on the Understanding, without being perceived, I can see no Difference there can be, between any Truths the Mind is capable of knowing, in respect of their Original: They must all be Innate, or all Adventitious: In vain shall a Man go about to distinguish them. He therefore, that talks of Innate Notions in the Understanding, cannot (if he intend thereby any distinct Sort of Truths) mean such Truths to be in the Understanding, as it never perceived, and is yet wholly ignorant of. For if these Words (*to be in the Understanding*) have any Propriety, they signify to be understood: So that, to be in the Understanding, and not to be understood; to be in the Mind, and never to be perceived; is all one, as to say, any thing is, and is not, in the Mind or Understanding. If therefore, these two Propositions, *Whatsoever is, is; and it is impossible for the same Thing to be, and not to be;* are by Nature imprinted, Children cannot be ignorant of them; Infants, and all that have Souls, must necessarily have them in their Understandings, know the Truth of them, and assent to it.

That Men know them, when they come to the Use of Reason, answered.

§. 6. To avoid this, 'tis usually answered, That all Men know and assent to them, *when they come to the Use of Reason;* and this is enough to prove them Innate. I answer,

§. 7. DOUBTFUL Expressions, that have scarce any Signification, go for clear Reasons, to those, who being possessed, take not the Pains to examine even what they themselves say. For to apply this Answer, with any tolerable Sense, to our present Purpose, it must signify one of these two Things; either, That, as soon as Men come to the Use of Reason, these supposed native Inscriptions come to be known, and observed by them: Or else, That the Use and Exercise of Mens Reason assists

sifts them in the Discovery of these Principles, and certainly makes them known to them.

§. 8. If they mean that, by the *Use of Reason*, Men may discover these Principles; and that this is sufficient to prove them Innate; their Way of arguing will stand thus, (*viz.*) That whatever Truths Reason can certainly discover to us, and make us firmly assent to, those are all naturally imprinted on the Mind; since that universal Assent, which is made the Mark of them, amounts to no more but this; That, by the Use of Reason; we are capable to come to a certain Knowledge of, and assent to them; and, by this Means, there will be no Difference between the Maxims of the Mathematicians, and Theorems they deduce from them: All must be equally allow'd Innate; they being all Discoveries made by the Use of Reason, and Truths, that a rational Creature may certainly come to know, if he apply his Thoughts rightly that Way.

§. 9. But how can these Men think the *Use of Reason* necessary to discover Principles, that are supposed Innate, when Reason (if we may believe them) is nothing else, but the Faculty of deducing unknown Truths from Principles, or Propositions, that are already known? That certainly can never be thought Innate, which we have need of Reason to discover; unles, as I have said, we will have all the certain Truths, that Reason ever teaches us, to be Innate. We may as well think the Use of Reason necessary to make our Eyes discover visible Objects, as that there should be need of Reason, or the Exercise thereof, to make the Understanding see what is originally engraven on it, and cannot be in the Understanding, before it be perceived by it. So that, to make Reason discover those Truths, thus imprinted, is to say, that the Use of Reason discovers to a Man what he knew before; and if Men have those innate impressed Truths, originally, and before the Use of Reason, and yet are always ignorant of them, till they come to the Use of Reason, 'tis in effect to say, that Men know, and know them not, at the same time.

If Reason discovered them, that would not prove them Innate.

'Tis false, that Reason discovers them.

§. 10. 'TWILL here perhaps be said, that Mathematical Demonstrations, and other Truths, that are not Innate, are not assented to, as soon as propos'd. wherin they are distinguish'd from these Maxims, and other Innate Truths. I shall have occasion to speak of Assent, upon the first proposing, more particularly by and by. I shall here only, and that very readily, allow that these Maxims, and Mathematical Demonstrations, are in this different; that the one has need of Reason, using of Proofs, to make them out, and to gain our Assent; but the other, as soon as understood, are, without any the least Reasoning, embraced and assented to. But I withal beg leave to observe, that it lays open the Weakness of the Subterfuge, which requires the *Use of Reason*, for the Discovery of these general Truths; since it must be confessed, that, in their Discovery, there is no use made of Reasoning at all. And I think those, who give this Answer, will not be forward to affirm, That the Knowledge of this Maxim, *That it is impossible for the same thing to be, and not to be,* is a Deduction of our Reason. For this would be to destroy that Bounty of Nature, they seem so fond of, whilst they make the Knowledge of those Principles to depend on the Labour of our Thoughts. For all Reasoning is Search, and casting about, and requires Pains and Application. And how can it, with any tolerable Sense, be suppos'd, that what was imprinted by Nature, as the Foundation and Guide of our Reason, should need the Use of Reason to discover it?

§. 11. THOSE, who will take the Pains to reflect, with a little Attention, on the Operations of the Understanding, will find, that this ready Assent of the Mind to some Truths, depends not, either on native Inscription, or the *Use of Reason*; but on a Faculty of the Mind, quite distinct from both of them, as we shall see hereafter. Reason, therefore, having nothing to do in procuring our Assent to these Maxims, if by saying, *That Men know and assent to them, when they come to the Use of Reason,* be meant, that the Use of Reason assists us in the Knowledge of these Maxims, it is utterly false; and, were it true, would prove them not to be Innate.

§. 12. If by knowing and assenting to them, *when we come to the Use of Reason*, be meant, that this is the Time when they come to be taken notice of by the Mind; and that, as soon as Children come to the *Use of Reason*, they come also to know and assent to these Maxims; this also is false and frivolous. *First*, It is false; Because it is evident, these Maxims are not in the Mind so early as the Use of Reason; and therefore, the coming to the Use of Reason is falsely assigned, as the Time of their Discovery. How many Instances of the Use of Reason may we observe in Children, a long time before they have any Knowledge of this Maxim, *That it is impossible for the same thing to be, and not to be?* And a great Part of illiterate People, and Savages, pass many Years, even of their rational Age, without ever thinking on this, and the like general Propositions. I grant, Men come not to the Knowledge of these general and more abstract Truths, which are thought Innate, 'till they come to the Use of Reason; and I add, nor then neither. Which is so; because, 'till after they come to the Use of Reason, those general abstract Ideas are not framed in the Mind, about which those general Maxims are, which are mistaken for Innate Principles, but are, indeed, Discoveries made, and Verities introduced, and brought into the Mind, by the same Way, and discovered by the same Steps, as several other Propositions, which no body was ever so extravagant as to suppose Innate. This I hope to make plain in the Sequel of this Discourse. I allow, therefore, a Necessity that Men should come to the Use of Reason, before they get the Knowledge of those general Truths; but deny, that Mens coming to the Use of Reason is the Time of their Discovery.

§. 13. In the mean time, it is observable, that this Saying, That Men know, and assent to these Maxims, *when they come to the Use of Reason*, amounts, in reality of Fact, to no more but this, That they are never known, nor taken notice of, before the Use of Reason, but may, possibly, be assented to, some time after, during a Man's Life; but when, is uncertain:

The coming to the Use of Reason, not the Time we come to know these Maxims.

By this, they are not distinguished from other knowable Truths.

tain: And so may all other knowable Truths, as well as these; which therefore have no Advantage, nor Distinction from others, by this Note of being known, when we come to the Use of Reason; nor are therby proved to be Innate, but quite the contrary.

If coming to the Use of Reason were the Time of their Discovery, it would not prove them Innate.

§. 14. BUT, Secondly, were it true, that the precise Time of their being known, and assented to, were, when Men come to the Use of Reason, neither would that prove them Innate. This Way of arguing is so frivolous, as the Supposition itself is false. For, by what kind of Logic will it appear, that any Notion is originally by Nature imprinted in the Mind, in its first Constitution, because it comes first to be observed, and assented to, when a Faculty of the Mind, which has quite a distinct Province, begins to exert itself? And therefore, the coming to the Use of Speech, if it were supposed the Time that these Maxims are first assented to, (which it may be with as much Truth, as the Time when Men come to the Use of Reason) would be as good a Proof that they were Innate, as to say, they are Innate, because Men assent to them, when they come to the Use of Reason. I agree then, with these Men of Innate Principles, that there is no Knowledge of these general and self-evident Maxims in the Mind, till it comes to the Exercise of Reason: But I deny, that the coming to the Use of Reason, is the precise Time when they are first taken notice of; and if that were the precise Time, I deny that it will prove them Innate. All that can with any Truth be meant by this Proposition, That Men *assent to them, when they come to the Use of Reason*, is no more but this, That the making of general abstract Ideas, and the understanding of general Names, being a Concomitant of the rational Faculty, and growing up with it, Children commonly get not those general Ideas, nor learn the Names that stand for them, 'till having for a good while exercized their Reason, about familiar and more particular Ideas, they are, by their ordinary Discourse and Actions with others, acknowledged to be capable of rational Conversation. If assenting to these Maxims, when Men come to

the

the Use of Reason, can be true, in any other Sense, I desire it may be shewn; or at least, how in this, or any other Sense, it proves them Innate.

§. 15. THE Senses at first let in particular *Ideas*, and furnish the yet empty Cabinet; and the Mind by degrees growing familiar with some of them, they are lodged in the Memory, and Names got to them. Afterwards the Mind, proceeding farther, abstracts them, and by degrees learns the Use of general Names. In this manner the Mind comes to be furnish'd with *Ideas* and Language, the Materials, about which to exercise its discursive Faculty: And the Use of Reason becomes daily more visible, as these Materials, that give it Employment, encrease. But tho' the having of general *Ideas*, and the Use of general Words and Reason, usually grow together; yet, I see not, how this any way proves them Innate. The Knowledge of some Truths, I confess, is very early in the Mind; but in a Way that shews them not to be Innate. For, if we will observe, we shail find it still to be about *Ideas*, not Innate, but acquir'd: It being about those first, which are imprinted by external Things, with which Infants have earliest to do, which make the most frequent Impressions on their Senses. In *Ideas* thus got, the Mind discovers, that some agree, and others differ, probably as soon as it has any Use of Memory; as soon as it is able to retain and receive distinct *Ideas*. But whether it be then, or no, this is certain, it does so, long before it has the Use of Words, or comes to that, which we commonly call, the *Use of Reason*. For a Child knows as certainly, before it can speak, the Difference between the *Ideas* of Sweet and Bitter, (*i. e.* that Sweet is not Bitter) as it knows afterwards (when it comes to speak) that Wormwood and Sugar-Plums are not the same Thing.

§. 16. A CHILD knows not that Three and Four are equal to Seven, 'till he comes to be able to count to Seven, and has got the Name and *Idea* of Equality: And then, upon explaining those Words, he presently assents to, or rather perceives the Truth of that Proposition. But neither does he then readily assent, because it is an Innate Truth, nor was his Assent wanting till then, because he wanted the *Use of Reason*; but the Truth of it appears

*The Steps, by
which the Mind
attains several
Truths.*

to him, as soon as he has settled in his Mind the clear and distinct *Ideas*, that these Names stand for: And then he knows the Truth of that Proposition, upon the same Grounds, and by the same Means, that he knew before, that a Rod and a Cherry are not the same thing; and upon the same Grounds also, that he may come to know afterwards, *That it is impossible for the same Thing to be, and not to be*, as shall be more fully shewn hereafter. So that the later it is before any one comes to have those general *Ideas*, about which those Maxims are; or to know the Signification of those general Terms, that stand for them; or to put together, in his Mind, the *Ideas* they stand for; the later also will it be, before he comes to assent to those Maxims, whose Terms, with the *Ideas* they stand for, being no more Innate, than those of a Cat or a Weasel, he must stay 'till Time and Observation have acquainted him with them; and then he will be in a Capacity to know the Truth of these Maxims, upon the first Occasion, that shall make him put together those *Ideas* in his Mind, and observe whether they agree or disagree, according as is expressed in those Propositions; and therefore it is, that a Man knowsthat Eighteen and Nineteen are equal to Thirty-seven, by the same Self-evidence, that he knows One and Two to be equal to Three: Yet a Child knows this not so soon as the other; not for want of the Use of Reason, but because the *Ideas* the Words Eighteen, Nineteen, and Thirty-seven stand for, are not so soon got, as those which are signify'd by One, Two, and Three.

Affenting, as soon as proposed, and understood, proves them not Innate.

§. 17. THIS Evasion, therefore, of general Assent, when Men come to the Use of Reason, failing, as it does, and leaving no Difference between those supposed Innate, and other Truths, that are afterwards acquired and learnt; Men have endeavoured to secure an universal Assent to those they call Maxims, by saying, they are generally *assented to, as soon as proposed,* and the Terms they are propos'd in understood: Seeing all Men, even Children, as soon as they hear and understand the Terms, assent to these Propositions, they think it is sufficient to prove them Innate. For, since Men never fail, after they have once understood the Words, to acknowledge them for undoubted Truths,

Truths, they would infer, that certainly these Propositions were first lodged in the Understanding; which, without any teaching, the Mind, at the very first Proposal, immediately closes with, and assents to, and after that never doubts again.

§. 18. IN Answer to this, I demand, Whether ready *Affent*, given to a Proposition upon first hearing, and understanding the Terms, be a certain Mark of an Innate Principle? If it be not, such a general Assent is in vain urged as a Proof of them: If it be said, that it is a Mark of Innate, they must then allow all such Propositions to be Innate, which are generally assented to, as soon as heard, whereby they will find themselves plentifully stored with Innate Principles. For, upon the same Ground, *viz.* of Assent at first hearing, and understanding the Terms, That Men would have those Maxims pass for Innate, they must also admit several Propositions about Numbers, to be Innate: And thus, *That One and Two are equal to Three; that Two and Two are equal to Four;* and a Multitude of other the like Propositions in Numbers, that every body assents to, at first hearing, and understanding the Terms, must have a Place amongst these Innate Axioms. Nor is this the Prerogative of Numbers alone, and Propositions made about several of them; but even Natural Philosophy, and all the other Sciences, afford Propositions, which are sure to meet with Assent, as soon as they are understood. *That Two Bodies cannot be in the same Place,* is a Truth, that no body any more flicks at, than at this Maxim, *That it is impossible for the same Thing to be, and not to be; that White is not Black; that a Square is not a Circle; that Yellowness is not Sweetness:* These, and a Million of other such Propositions, as many at least as we have distinct Ideas of, every Man in his Wits, at first hearing, and knowing what the Names stand for, must necessarily assent to. If these Men will be true to their own Rules, and have *Affent*, at first hearing and understanding the Terms, to be a Mark of Innate, they must allow, not only as many Innate Propositions, as Men have distinct Ideas; but as many as Men can make Propositions, wherein different Ideas are denied one of another. Since every Proposition,

If such an Affent be a Mark of Innate, then, that One and Two are equal to Three; that Sweetness is not Bitterness; and a thousand the like, must be Innate.

sition, wherein one different *Idea* is denied of another, will as certainly find Assent, at first hearing and understanding the Terms, as this general one, *It is impossible for the same Thing to be, and not to be*; or that which is the Foundation of it, and is the easier understood of the two, *The same is not different*: By which Account they will have Legions of Innate Propositions of this one sort, without mentioning any other. But, since no Proposition can be Innate, unless the *Ideas*, about which it is, be Innate; this will be, to suppose all our *Ideas* of Colours, Sounds, Tastes, Figures, &c. Innate; than which, there cannot be any thing more opposite to Reason and Experience. Universal and ready Assent, upon hearing and understanding the Terms, is, (I grant) a Mark of Self-evidence; but Self-evidence depending, not on Innate Impressions, but on something else, (as we shall shew hereafter) belongs to several Propositions, which no body was yet so extravagant as to pretend to be Innate.

Such less general Propositions known, before these universal Maxims.

§. 19. Nor let it be said, That those more particular, self-evident Propositions, which are assented to at first hearing, as, *That One and Two are equal to Three*: *That Green is not Red*, &c. are received as the Consequences of those more universal Propositions, which are look'd on as Innate Principles; since any one, who will but take the pains to observe what passes in the Understanding, will certainly find, that these, and the like less general Propositions, are certainly known, and firmly assented to, by those, who are utterly ignorant of those more general Maxims; and so, being earlier in the Mind than those (as they are called) first Principles, cannot owe to them the Assent wherewith they are received at first hearing.

One and One equal to Two, &c. not general nor useful, answered.

§. 20. If it be said, that these Propositions, *viz. Two and Two are equal to Four*; *Red is not Blue*, &c. are not general Maxims, nor of any great Use: I answer, That makes nothing to the Argument of universal Assent, upon hearing and understanding. For, if that be the certain Mark of Innate, whatever Proposition can be found, that receives general Assent, as soon as heard and understood, that must be admitted for an Innate Proposition,

Proposition, as well as this Maxim, *That it is impossible for the same Thing to be, and not to be*; they being upon this Ground equal. And, as to the Difference of being more general, that makes this Maxim more remote from being Innate; those general and abstract Ideas, being more Strangers to our first Apprehensions, than of those more particular self-evident Propositions; and therefore, 'tis longer before they are admitted and assented to, by the growing Understanding. And, as to the Usefulness of these magnified Maxims, that perhaps will not be found so great, as is generally conceived, when it comes in its due place to be more fully considered.

§. 21. But we have not yet done with *Affenting to Propositions, at first hearing, and understanding their Terms*; 'tis fit we first take Notice, That this, instead of being a Mark, that they are Innate, is a Proof of the contrary: Since it supposes, that several, who understand and know other Things, are ignorant of these Principles, 'till they are propos'd to them; and that one may be unacquainted with these Truths, 'till he hears them from others. For, if they were Innate, what need they be propos'd, in order to gaining Assent; when, by being in the Understanding, by a natural and original Impression, (if there were any such) they could not but be known before? Or, doth the proposing them, print them clearer in the Mind, than Nature did? If so, then the Consequence will be, That a Man knows them better, after he has been thus taught them, than he did before. Whence it will follow, That these Principles may be made more evident to us, by others Teaching, than Nature has made them by Impression; which will ill agree with the Opinion of Innate Principles, and give but little Authority to them; but, on the contrary, makes them unfit to be the Foundations of all our other Knowledge, as they are pretended to be. This cannot be deny'd, that Men grow first acquainted with many of these self-evident Truths, upon their being proposed: But it is clear, that whosoever does so, finds in himself, That he then begins to know a Proposition, which he knew not before, and which from thenceforth

*These Maxims
not being known,
sometimes, 'till
proposed, proves
them not In-
nate.*

he

he never questions; not because it was Innate, but because the Consideration of the Nature of the Things, contained in those Words, would not suffer him to think otherwise, how, or whenever he is brought to reflect on them. And if whatever is assented to, at first hearing, and understanding the Terms, must pass for an Innate Principle, every well-grounded Observation, drawn from Particulars into a general Rule, must be Innate. When yet it is certain, that not all, but only sagacious Heads, light at first on these Observations, and reduce them into general Propositions, not Innate, but collected from a preceding Acquaintance, and Reflection on particular Instances. These, when observing Men have made them, unobserving Men, when they are propos'd to them, cannot refuse their Assent to.

Implicitly known, before proposing, signifies, that the Mind is capable of understanding them, or else signifies nothing.

§. 22. If it be said, the Understanding hath an implicit Knowledge of these Principles, but not an explicit, before this first hearing, (as they must, who will say, That they are in the Understanding, before they are known) it will be hard to conceive, what is meant by a Principle, imprinted on the Understanding implicitly; unless it be this, that the Mind is capable of understanding and assenting firmly to such Propositions. And thus, all mathematical Demonstrations, as well as first Principles, must be received as native Impressions on the Mind; which, I fear, they will scarce allow them to be, who find it harder to demonstrate a Proposition, than assent to it, when demonstrated. And few Mathematicians will be forward to believe, that all the Diagrams they have drawn, were but Copies of those Innate Characters, which Nature had engraven upon their Minds.

The Argument, of Assenting, on first hearing, is upon a false Supposition of no precedent Teaching.

§. 23. THERE is, I fear, this farther Weakness in the foregoing Argument, which would persuade us, that therefore those Maxims are to be thought Innate, which Men admit at first hearing, because they assent to Propositions, which they are not taught, nor do receive from the Force of any Argument, or Demonstration, but a bare Explanation, or understanding of the Terms. Under which, there seems

seems to me to lie this Fallacy, That Men are supposed not to be taught, nor to learn any thing *de novo*; when, in truth, they are taught, and do learn something they were ignorant of before. For first it is evident, they have learned the Terms, and their Signification; neither of which was born with them. But this is not all the acquired Knowledge in the Case: The *Ideas* themselves, about which the Proposition is, are not born with them, no more than their Names, but got afterwards. So that, in all Propositions that are assented to, at first hearing, the Terms of the Proposition, their standing for such *Ideas*, and the *Ideas* themselves that they stand for, being neither of them Innate; I would fain know, what there is remaining in such Propositions, that is Innate. For I would gladly have any one name that Proposition, whose Terms, or *Ideas*, were either of them Innate. We, by degrees, get *Ideas* and Names, and learn their appropriated Connexion one with another; and then to Propositions, made in such Terms, whose Signification we have learnt, and wherein the Agreement or Disagreement we can perceive in our *Ideas*, when put together, is expressed, we at first hearing assent; tho', to other Propositions, in themselves as certain and evident, but which are concerning *Ideas*, not so soon or so easily got, we are, at the same time, no way capable of assenting. For tho' a Child quickly assents to this Proposition, *That an Apple is not Fire*, when, by familiar Acquaintance, he has got the *Ideas* of those two different things distinctly imprinted on his Mind, and has learnt that the Names *Apple* and *Fire* stand for them; yet it will be some Years after, perhaps, before the same Child will assent to this Proposition, *That it is impossible for the same Thing to be, and not to be:* Because, that tho', perhaps, the Words are as easy to be learnt; yet the Signification of them, being more large, comprehensive, and abstract, than of the Names annexed to those sensible things, the Child hath to do with, it is longer before he learns their precise Meaning, and it requires more time plainly to form in his Mind those general *Ideas* they stand for. 'Till that be done, you will in vain endeavour to make any Child assent to a Proposition, made up of such general Terms: But, as soon as ever he has got those *Ideas*, and learn'd their Names, he forwardly closes with the one, as well

well as the other, of the fore-mentioned Propositions, and with both, for the same Reason, *viz.* because he finds the *Ideas*, he has in his Mind, to agree, or disagree, according as the Words, standing for them, are affirmed, or denied one of another, in the Proposition. But if Propositions be brought to him in Words, which stand for *Ideas* he has not yet in his Mind; to such Propositions, however evidently true or false in themselves, he affords neither Assent nor Dissent, but is ignorant. For Words being but empty Sounds, any farther than they are Signs of our *Ideas*, we cannot but assent to them, as they correspond to those *Ideas* we have, but no farther than that. But the shewing by what Steps and Ways Knowledge comes into our Minds, and the Grounds of several Degrees of Assent, being the Busines of the following Discourse, it may suffice to have only touched on it here, as one Reason, that made me doubt of those Innate Principles.

Not Innate, §. 24. To conclude this Argument of *Universal Consent*, I agree with these Defenders of Innate Principles, That, if they are Innate, they ed to.

because not universally assent- must needs have *Universal Assent*. For, that a Truth should be Innate, and yet not assented to, is, to me, as unintelligible, as for a Man to know a Truth, and be ignorant of it, at the same time. But then, by these Mens own Confession, they cannot be Innate; since they are not assented to, by those, who understand not the Terms, nor by a great Part of those, who do understand them, but have yet never heard, nor thought of those Propositions; which, I think, is at least one half of Mankind. But, were the Number far less, it would be enough to destroy *Universal Assent*, and thereby shew these Propositions not to be Innate, if Children alone were ignorant of them.

These Maxims §. 25. But, that I may not be accused to argue from the Thoughts of Infants, which are known.

not the first unknown to us, and to conclude, from what passes in their Understandings, before they express it; I say next, That these two general Propositions are not the Truths, that first possess the Minds of Children; nor are antecedent to all acquired and adventitious Notions; which, if they were Innate, they must needs be. Whether we can determine it or no, it

matters not; there is certainly a Time when Children begin to think, and their Words and Actions do assure us that they do so. When, therefore, they are capable of Thought, of Knowledge, of Assent, can it rationally be supposed, they can be ignorant of those Notions that Nature has imprinted, were there any such? Can it be imagined, with any Appearance of Reason, That they perceive the Impressions, from things without, and be at the same time ignorant of those Characters, which Nature itself has taken care to stamp within? Can they receive and assent to adventitious Notions, and be ignorant of those, which are supposed woven into the very Principles of their Being, and imprinted there in indelible Characters, to be the Foundation and Guide of all their acquired Knowledge, and future Reasonings? This would be, to make Nature take pains to no purpose; or, at least, to write very ill; since its Characters could not be read by those Eyes, which saw other things very well; and those are very ill supposed the clearest Parts of Truth, and the Foundations of all our Knowledge, which are not first known, and without which, the undoubted Knowledge of several other things may be had. The Child certainly knows, that the *Nurse* that feeds it, is neither the *Cat* it plays with, nor the *Blackmoor* it is afraid of; that the *Wormseed* or *Mustard* it refuses, is not the *Apple* or *Sugar* it cries for; this it is certainly and undoubtedly assured of: But will any one say, it is by virtue of this Principle, *That it is impossible for the same Thing to be, and not to be,* that it so firmly assents to these, and other Parts of its Knowledge? Or that the Child has any Notion, or Apprehension, of that Proposition, at an Age, wherein yet 'tis plain, it knows a great many other Truths? He that will say, Children join these general abstract Speculations with their Sucking-bottles and their Rattles, may, perhaps, with Justice, be thought to have more Passion and Zeal for his Opinion, but less Sincerity and Truth, than one of that Age.

§. 26. Tuo' therefore, there be several gene-
ral Propositions, that meet with constant and ready Assent, as soon as proposed to Men grown up, who have attained the Use of more general and abstract Ideas, and Names standing for them; yet they not being to be found in

*And so not In-
nate.*

those of tender Years, who, nevertheless, know other things, they cannot pretend to universal Assent of intelligent Persons, and so by no means can be supposed Innate: It being impossible, that any Truth, which is Innate, (if there were any such) should be unknown, at least to any one, who knows anything else: Since, if they are Innate Truths, they must be Innate Thoughts; there being nothing a Truth in the Mind, that it has never thought on. Whereby it is evident, if there be any *Innate Truths, in the Mind*, they must necessarily be the first of any thought on; the first that appear there.

Not Innate, because they appear least, where what is Innate shews itself clearest.

§. 27. THAT the general Maxims, we are dis- coursing of, are not known to *Children, Ideots*, and a great Part of *Mankind*, we have already sufficiently proved; whereby it is evident, they have not an universal Assent, nor are general

Impressions. But there is this farther Argument in it, against their being Innate; That these Characters, if they were native and original Impressions, should appear fairest and clearest in those Persons, in whom yet we find no Footsteps of them: And 'tis, in my Opinion, a strong Presumption, that they are not Innate; since they are least known to those, in whom, if they were Innate, they must needs exert themselves with most Force and Vigour. For *Children, Ideots, Savages*, and *Illiterate People*, being of all others, the least corrupted by Custom, or borrowed Opinions; Learning and Education having not cast their native Thoughts into new Moulds, nor by superinducing foreign and studied Doctrines, confounded those fair Characters Nature had written there; one might reasonably imagine, that in their Minds, these Innate Notions should lie open fairly, to every one's View, as 'tis certain the Thoughts of Children do. It might very well be expected, that these Principles should be perfectly known to Naturals; which, being stamped immediately on the Soul, (as these Men suppose) can have no Dependence on the Constitutions, or Organs of the Body, the only confessed Difference between them and others. One would think, according to these Mens Principles, that all these native Beams of Light (were there any such) should in those, who have no Reserves, no Arts of Concealment,

ment, shine out in their full Lustre, and leave us in no more doubt of their being there, than we are to their Love of Pleasure, and Abhorrence of Pain. But, alas! amongst *Children, Ideots, Savages*, and the grossly *Illiterate*, what general Maxims are to be found? What universal Principles of Knowledge? Their Notions are few and narrow, borrowed only from those Objects they have had most to do with, and which have made upon their Senses the frequentest and strongest Impressions. A Child knows his Nurse, and his Cradle, and by degrees the Play-things of a little more advanced Age: And a young Savage has, perhaps, his Head fill'd with Love, and Hunting, according to the Fashion of his Tribe. But he that, from a Child untaught, or a wild Inhabitant of the Woods, will expect these abstract Maxims, and reputed Principles of Sciences, will, I fear, find himself mistaken. Such kind of general Propositions are seldom mentioned in the Huts of *Indians*, much less are they to be found in the Thoughts of *Children*, or any Impressions of them on the Minds of *Naturals*. They are the Language and Business of the Schools and Academies of learned Nations, accustomed to that sort of Conversation, or Learning, where Disputes are frequent: These Maxims being suited to artificial Argumentation, and useful for Conviction; but not much conducing to the Discovery of Truth, or Advancement of Knowledge. But of their small Use for the Improvement of Knowledge, I shall have Occasion to speak more at large, B. IV. C. VII.

§. 28. I know not how absurd this may seem *Recapitulation.*
to the Masters of Demonstration; and, probably, *tion.*
it will hardly down with any body at first hearing. I must therefore beg a little Truce with Prejudice, and the Forbearance of Censure, till I have been heard out, in the Sequel of this Discourse, being very willing to submit to better Judgments. And since I impartially search after Truth, I shall not be sorry to be convinced, that I have been too fond of my own Notions; which I confess we are all apt to be, when Application and Study have warmed our Heads with them.

UPON the whole Matter, I cannot see any ground to think these two famed speculative Maxims innate, since they are not universally

universally assented to; and the Assent they so generally find, is no other than what several Propositions, not allowed to be Innate, equally partake in with them: And since the Assent, that is given them, is produced another way, and comes not from natural Inscription, as I doubt not but to make appear, in the following Discourse. And if *these first Principles of Knowledge and Science are found not to be Innate, no other speculative Maxims, can (I suppose) with better Right pretend to be so.*

C H A P III.

No Innate Practical Principles.

No moral Principles so clear, and so generally received, as the forementioned speculative Maxims.

§. I. **I**F those speculative Maxims, whereof we discoursed in the foregoing Chapter, have not an actual universal Assent from all Mankind, as we there prov'd, it is much more visible, concerning *Practical Principles*, that they *come short of an universal Reception*: And I think it will be hard to instance any one moral Rule, which can pretend to so general and ready an Assent, as *What is, is*; or to be so manifest a Truth as this, *That it is impossible for the same Thing to be, and not to be*. Whcreby it is evident, that they are farther removed from a Title to be Innate; and the doubt, of their being native Impressions on the Mind, is stronger against these moral Principles, than the other. Not that it brings their Truth at all in question: They are equally true, tho' not equally evident. Those speculative Maxims carry their own Evidence with them: But moral Principles require Reasoning and Discourse, and some Exercise of the Mind, to discover the Certainty of their Truth. They lie not open as natural Characters, engraven on the Mind; which, if any such were, they must needs be visible by themselves, and by their own Weight be certain and known to every body. But this is no Derogation to their Truth and Certainty, no more than it is to the Truth or Certainty of the three Angles

Angles of a Triangle being equal to two right ones, because it is not so evident, as, *the Whole is bigger than a Part*; nor so apt to be assented to, at first hearing. It may suffice, that these moral Rules are capable of Demonstration; and therefore, it is our own fault, if we come not to a certain Knowledge of them. But the Ignorance, wherein many Men are of them, and the Slowness of Assent, wherewith others receive them, are manifest Proofs, that they are not Innate, and such as offer themselves to their View, without searching.

§. 2. WHETHER there be any such moral Principles, wherein all Men do agree, I appeal to any, who have been but moderately conversant in the History of Mankind, and look'd abroad beyond the Smoak of their own Chimneys. Where is that practical Truth, that is universally received, without doubt or question, as it must be, if Innate? *Justice*, and keeping of Contracts, is that which *most Men seem to agree in*. This is a Principle, which is thought to extend itself to the Dens of Thieves, and the Confederacies of the greatest Villains; and they, who have gone farthest towards the putting off Humanity itself, keep Faith and Rules of Justice one with another. I grant, that Out-laws themselves do this one amongst another; but 'tis without receiving these as the Innate Laws of Nature. They practise them, as Rules of Convenience, within their own Communities: But it is impossible to conceive, that he embraces Justice as a practical Principle, who acts fairly with his fellow Highwaymen, and at the same time plunders, or kills the next honest Man he meets with. Justice and Truth are the common Ties of Society; and therefore, even Out-laws, and Robbers, who break with all the World besides, must keep Faith and Rules of Equity amongst themselves, or else they cannot hold together. But will any one say, That those that live by Fraud and Rapine, have Innate Principles of Truth and Justice, which they allow and assent to?

§. 3. PERHAPS it will be urged, That the *tacit Assent of their Minds agrees to what their Practice contradicts*. I answer, First, I have always

Faith and Justice, not owned as Principles by all Men.

Object:
Tho' Men deny them in their Practice,

thought

*yet they admit
them in their
Thoughts, an-
swered.*

thought the Actions of Men the best Interpreters of their Thoughts. But since it is certain, that most Mens Practice, and some Mens open Professions have either questioned, or denied, these Principles, it is impossible to establish an universal Consent, (tho' we should look for it only amongst grown Men) without which, it is impossible to conclude them Innate. *Secondly,* 'Tis very strange and unreasonable, to suppose Innate Practical Principles, that terminate only in Contemplation. Practical Principles, derived from Nature, are there for Operation, and must produce Conformity of Action, not barely speculative Assent to their Truth; or else they are in vain distinguished from speculative Maxims. Nature, I confess, has put into Man a Desire of Happiness, and an Aversion to Misery: These, indeed, are Innate Practical Principles, which (as Practical Principles ought) do continue constantly to operate and influence all our Actions, without ceasing. These may be observed in all Persons and all Ages, steady and universal; but these are Inclinations of the Appetite to Good, not Impressions of Truth on the Understanding. I deny not, that there are natural Tendencies, imprinted on the Minds of Men; and that from the very first Instances of Sense and Perception, there are some things that are grateful, and others unwelcome to them; some things that they incline to, and others that they fly: But this makes nothing for Innate Characters on the Mind, which are to be the Principles of Knowledge, regulating our Practice. Such natural Impressions on the Understanding, are so far from being confirmed thereby, that this is an Argument against them; since, if they were certain Characters, imprinted by Nature on the Understanding, as the Principles of Knowledge, we could not but perceive them constantly operate in us, and influence our Knowledge, as we do those others on the Will and Appetite; which never cease to be the constant Springs and Motives of all our Actions, to which we perpetually feel them strongly impelling us.

*Moral Rules
need a Proof,
ergo, not In-
nate.*

§. 4. ANOTHER Reason, that makes me doubt of any Innate Practical Principles, is, That I think there cannot any one moral Rule be propos'd, whereof

whereof a Man may not justly demand a Reason; which would be perfectly ridiculous, and absurd, if they were Innate, or so much as Self-evident; which every Innate Principle must needs be, and not need any Proof to ascertain its Truth, nor want any Reason to gain its Approbation. He would be thought void of common Sense, who asked on the one side, or on the other side, to give a Reason, *Why it is impossible for the same thing to be, and not to be.* It carries its own Light and Evidence with it, and needs no other Proof: He that understands the Terms, assents to it for its own sake, or else nothing will ever be able to prevail with him to do it. But should that most unshaken Rule of Morality, and Foundation of all Social Virtue, *That one should do as he would be done unto,* be propos'd to one who never heard it before, but yet is of Capacity to understand its Meaning; might he not, without any Absurdity, ask a Reason why? And were not he that propos'd it bound to make out the Truth and Reasonableness of it to him? Which plainly shews it not to be Innate: For, if it were, it could neither want nor receive any Proof; but must needs (at least, as soon as heard and understood) be received and assented to, as an unquestionable Truth, which a Man can by no Means doubt of. So that the Truth of all these moral Rules plainly depends upon some other antecedent to them, and from which they must be deduced; which could not be, if either they were Innate, or so much as Self-evident.

§. 5. THAT Men should keep their Compacts, *Instance in keeping Com-pacts.* is certainly a great and undeniable Rule in Morality. But yet, if a Christian, who has the View of Happiness and Misery in another Life, be asked, why a Man must keep his Word, he will give this as a Reason: Because God, who has the Power of Eternal Life and Death, requires it of us. But if an Hobbit be asked why, he will answer, Because the Public requires it, and the Leviathan will punish you, if you do not. And, if one of the old Heathen Philosophers had been asked, he would have answer'd, Because it was dishonest, below the Dignity of a Man, and opposite to Virtue, the highest Perfection of human Nature, to do otherwise.

Virtue generally approved, not because Innate, but because profitable.

§. 6. HENCE naturally flows the great Variety of Opinions, concerning the moral Rules, which are to be found among Men, according to the different Sorts of Happiness they have a Prospect of, or propose to themselves: Which could not be, if Practical Principles were Innate, and imprinted in our Minds, immediately by the Hand of God. I grant the Existence of God is so many ways manifest, and the Obedience, we owe him, so congruous to the Light of Reason, that a great Part of Mankind give testimony to the Law of Nature; but yet I think it must be allowed, that several moral Rules may receive from Mankind a very general Approbation, without either knowing, or admitting the true Ground of Morality; which can only be the Will and Law of a God, who sees Men in the Dark, has in his Hand Rewards and Punishments, and Power enough to call to account the proudest Offender. For God having, by an inseparable Connexion, joined *Virtue* and *public Happiness* together; and made the Practice thereof necessary, to the Preservation of Society, and visibly beneficial to all with whom the virtuous Man has to do; it is no wonder, that every one should not only allow, but recommend, and magnify those Rules to others, from whose Observance of them he is sure to reap Advantage to himself. He may, out of Interest, as well as Conviction, cry up that for Sacred, which, if once trampled on, and profaned, he himself cannot be safe, nor secure. This, tho' it takes nothing from the Moral and Eternal Obligation, which these Rules evidently have; yet it shews, that the outward Acknowledgment Men pay them in their Words, proves not that they are Innate Principles: Nay, it proves not so much, that Men assent to them inwardly, in their own Minds, as the inviolable Rules of their own Practice; since we find, that Self-interest, and the Conveniences of this Life, make many Men own an outward Profession and Approbation of them, whose Actions sufficiently prove, that they very little consider the Lawgiver, that prescribed these Rules, nor the Hell he has ordained, for the Punishment of those that transgress them.

§. 7. FOR, if we will not, in Civility, allow too much Sincerity to the Professions of most Men, but think their Actions to be the Interpreters of their Thoughts, we shall find, that they have no such internal Veneration for these Rules, nor so full a Persuasion of their Certainty and Obligation. The great Principle of Morality, *To do as one would be done to*, is more commended than practised: But the Breach of this Rule cannot be a greater Vice, than to teach others, That it is no moral Rule, nor Obligatory, would be thought Madness, and contrary to that Interest Men sacrifice to, when they break it themselves. Perhaps Conscience will be urged, as checking us for such Breaches, and so the internal Obligation and Establishment of the Rule be preserved.

§. 8. To which I answer, That I doubt not, but without being written on their Hearts, many Men may, by the same way that they come to the Knowledge of other things, come to assent to several moral Rules, and be convinced of their Obligation. Others also may come to be of the same Mind, from their Education, Company, and Customs of their Country: Which *Persuasion, however got, will serve to set Conscience on work;* which is nothing else, but our own Opinion, or Judgment of the moral Rectitude, or Pravity of our own Actions. And if Conscience be a Proof of Innate Principles, Contraries may be Innate Principles; since some Men, with the same Bent of Conscience, prosecute what others avoid.

§. 9. BUT I cannot see, how any Men should ever transgress those moral Rules, with Confidence and Serenity, were they Innate, and stamped upon their Minds. View but an Army, at the sacking of a Town, and see what Observation, or Sense of moral Principles, or what touch of Conscience, for all the Outrages they do. *Robberies, Murders, Rapes,* are the Sports of Men, set at liberty from Punishment and Censure. Have there not been whole Nations, and those of the most civilized People, amongst whom the exposing their Children, and leaving them

*Mens Actions
convince us,
that the Rule of
Virtue is not
their internal
Principle.*

*Conscience, no

normities, prac-
tised without
Remorse.*

in the Fields, to perish by Want, or wild Beasts, has been the Practice, as little condemned, or scrupled, as the begetting them? Do they not still, in some Countries, put them into the same Graves with their Mothers, if they die in Child-birth; or dispatch them, if a pretended Astrologer declares them to have unhappy Stars? And are there not Places, where, at a certain Age, they kill, or expose, their Parents without any Remorse at all? In a Part of *Asia*, the Sick, when their Case comes to be thought desperate, are carried out, and laid on the Earth before they are dead; and left there, exposed to Wind and Weather, to perish

whereby the *Toucupinambos* believed they merited Paradise, were Revenge, and eating abundance of their Enemies. (f) They have not so much as the Name for God, no Acknowledgment of any God, no Religion, no Worship, p. 231. The Saints, who are canonized amongst the *Turks*, lead Lives, which one cannot with Modesty relate. A remarkable Passage to this Purpose, out of the Voyages of *Baumgarten*, which is a Book not every Day to be met with, I shall set down at large, in the Language it is published in. *Ibi (sc. prope Belbes in Ægypto) vidimus sanctum unum Saracenicum, inter arenarium cumulos, ita, ut ex utero matris prodiit, nudum sedentem. Mos est, ut didicimus, Mahomitis, ut eos, qui amentes, et sine ratione sunt, pro sanctis colant et venerantur. Insuper et eos, qui cum diu vitam egerint inquinatissimam, voluntariam demum penitentiam et paupertatem, sanctitate venerandos deputant.*

deputant. *Eiusmodi verò genus hominum libertatem quandam effrènem habent, domos quas volunt intrandi, edendi, bibendi, et quod majus est, concubandi; ex quo concubitu, si proles fecuta fuerit, sancta similiter habetur.* His ergo hominibus, dum vivunt, magnos exhibent honores; mortuis verò, vel templi, vel monumenta extruunt amplissima, eosque contingere ac sepelire maximæ fortunæ ducunt loco. *Audivimus hæc dicta ei dicenda per interpretem à Mucrelo nostro.* Insuper sanctum illum, quem eo loco vidimus, publicitus apprime commendari, eum esse hominem sanctum, divinum ac integritate præcipuum; eo quod, nec fæminarum unquam esset, nec puerorum, sed tantummodo a sellarum concubitor, atque mularum. Peregr. Baumgarten, l. ii. c. 1. p. 73. More of the same kind, concerning these precious Saints among the Turks, may be seen in *Pietro della Valle*, in his Letter of the 25th of January, 1616. Where then are those Innate Principles of Justice, Piety, Gratitude, Equity, Chastity? Or, where is that universal Consent, that assures us there are such inbred Rules? Murders in Duels, when Fashion has made them honourable, are committed, without Remorse of Conscience: Nay, in many Places, Innocence in this Case is the greatest Ignominy. And, if we look abroad, to take a View of Men, as they are, we shall find, that they have Remorse in one Place, for doing, or omitting that, which others, in another Place, think they merit by.

§. 10. HE that will carefully peruse the History of Mankind, and look abroad into the several Tribes of Men, and with Indifferency survey their Actions, will be able to satisfy himself, that there is scarce that Principle of Morality to be nam'd, or Rule of Virtue to be thought on, (those only excepted, that are absolutely necessary to hold Society together, which commonly too are neglected betwixt distinct Societies) which is not, somewhere or other, slighted, and condemned by the general Fashion of whole Societies of Men, governed by Practical Opinions, and Rules of Living, quite opposite to others.

§. 11. HERE, perhaps, 'twill be objected, *Whole Nations reject seven known,*

Men have contrary Practical Principles.

*real Moral
Rules.*

known, because it is broken. I grant the Objection good, where Men, tho' they transgress, yet disown not the Law; where Fear of Shame, Censure, or Punishment, carries the Mark of some Awe it has upon them. But it is impossible, to conceive, that a *whole Nation* of Men should all *publicly reject* and renounce, what every one of them, certainly and infallibly, knew to be a Law; for so they must, who have it naturally imprinted on their Minds. 'Tis possible, Men may sometimes own *Rules of Morality*, which, in their private Thoughts, they do not believe to be true, only to keep themselves in Reputation and Esteem, amongst those, who are persuaded of their Obligation. But 'tis not to be imagin'd, that a whole Society of Men should, publicly and professedly, disown, and cast off a Rule, which they could not, in their own Minds, but be infallibly certain was a Law; nor be ignorant, that all Men, they should have to do with, knew it to be such: And therefore, must every one of them apprehend from others, all the Contempt and Abhorrence due to one, who professes himself void of Humanity; and one, who, confounding the known and natural Measures of Right and Wrong, cannot but be look'd on, as the profess'd Enemy of their Peace and Happiness. Whatever Practical Principle is Innate, cannot but be known to every one, to be just and good. It is, therefore, little less than a Contradiction to suppose, That whole Nations of Men should, both in their Professions and Practice, unanimously and universally give the Lie to what, by the most invincible Evidence, every one of them knew to be True, Right, and Good. This is enough to satisfy us, That no Practical Rule, which is any where universally, and with public Approbation, or Allowance, transgressed, can be supposed Innate. But I have something farther to add, in Answer to this Objection.

§. 12. THE breaking of a Rule, say you, is no Argument that it is unknown. I grant it: But the *generally allowed Breach of it any where*, I say, *is a Proof that it is not Innate*. For Example: Let us take any of these Rules, which, being the most obvious Deductions of human Reason, and conformable to the natural

natural Inclination of the greatest Part of Men, fewest People have had the Impudence to deny, or Inconsideration to doubt of. If any can be thought to be naturally imprinted, none, I think, can have a fairer Pretence to be Innate, than this; *Parents, preserve and cherish your Children.* When therefore you say, That this is an Innate Rule, what do you mean? Either, that it is an Innate Principle, which, upon all Occasions excites and directs the Actions of all Men: Or else, that it is a Truth, which all Men have imprinted on their Minds, and which therefore they know and assent to: But in neither of these Senses is it Innate. *First,* That it is not a Principle, which influences all Mens Actions, is what I have proved, by the Examples before cited: Nor need we seek so far as *Mengrelia*, or *Peru*, to find Instances of such as neglect, abuse, nay, and destroy their Children; or look on it only as the more than Brutality of some savage and barbarous Nations, when we remember, that it was a familiar and uncondemned Practice amongst the *Greeks* and *Romans*, to expose, without Pity or Remorse, their innocent Infants. *Secondly,* That it is an Innate Truth, known to all Men, is also false: For, *Parents, preserve your Children,* is so far from an Innate Truth, that it is no Truth at all; it being a Command, and not a Proposition, and so not capable of Truth, or Falshood. To make it capable of being assented to, as true, it must be reduced to some such Proposition as this; *It is the Duty of Parents to preserve their Children.* But what Duty is, cannot be understood, without a Law; nor a Law be known, or supposed, without a Law-maker, or without Reward and Punishment: So that it is impossible that this, or any other Practical Principle, should be Innate; *i. e.* be imprinted on the Mind, as a Duty, without supposing the Ideas of God, of Law, of Obligation, of Punishment, of a Life after this, Innate: For that Punishment follows not, in this Life, the Breach of this Rule; and consequently, that it has not the Force of a Law, in Countries, where the generally allow'd Practice runs counter to it, is in itself evident. But these Ideas (which must be all of them Innate, if any Thing as a Duty be so) are so far from being Innate, that 'tis not every studious, or thinking Man, much

much less every one that is born, in whom they are to be found clear and distinct: And that one of them, which of all others seems most likely to be Innate, is not so, (I mean the *Idea of God*) I think, in the next Chapter, will appear very evident, to any considering Man.

§. 13. FROM what has been said, I think, we may safely conclude, That, whatever *Practical Rule* is, in any Place, generally, and with Allowance broken, cannot be supposed Innate; it being impossible that Men should, without Shame or Fear, confidently and serenely break a Rule, which they could not but evidently know, that God had set up, and would certainly punish the Breach of (which they must, if it were Innate) to a degree, to make it a very ill Bargain to the Transgressor. Without such a Knowledge as this, a Man can never be certain that any thing is his Duty. Ignorance, or Doubt of the Law; Hopes to escape the Knowledge, or Power of the Law-maker, or the like, may make Men give way to a present Appetite: But let any one see the Fault, and the Rod by it, and, with the Transgression, a Fire ready to punish it; a Pleasure tempting, and the Hand of the Almighty visibly held up, and prepared to take Vengeance, (for this must be the Case, where any Duty is imprinted on the Mind) and then tell me, whether it be possible for People, with such a Prospect, such a certain Knowledge as this, wantonly, and without Scruple, to offend against a Law, which they carry about them in indeible Characters, and that stares them in the Face, whilst they are breaking it? Whether Men, at the same time that they feel in themselves the imprinted Edicts of an Omnipotent Law-maker, can, with Assurance and Gaiety, slight and trample under foot his most sacred Injunctions? And lastly, Whether it be possible, that, whilst a Man thus openly bids defiance to this Innate Law, and supreme Law-giver, all the By-standers, yea, even the Governors and Rulers of the People, full of the same Sense, both of the Law and Law-maker, should silently connive, without testifying their dislike, or laying the least blame on it? Principles of Actions, indeed, there are lodged in Mens Appetites, but these are so far from being Innate, moral Principles,

ciples, that, if they were left to their full Swing, they would carry Men to the over-turning of all Morality. Moral Laws are set as a Curb and Restraint to these exorbitant Desires, which they cannot be, but by Rewards and Punishments, that will over-balance the Satisfaction, any one shall propose to himself, in the Breach of the Law. If, therefore, any thing be imprinted on the Mind of all Men, as a Law, all Men must have a certain and unavoidable Knowledge, that certain and unavoidable Punishment will attend the Breach of it: For, if Men can be ignorant, or doubtful, of what is Innate, Innate Principles are insisted on, and urged, to no Purpose. Truth and Certainty (the things pretended) are not at all secured by them; but Men are in the same uncertain, floating Estate with, as without them. An evident, undubitable Knowledge of unavoidable Punishment, great enough to make the Transgression very uneligible, must accompany an Innate Law; unless, with an Innate Law, they can suppose an Innate Gospel too. I would not here be mistaken, as if, because I deny an Innate Law, I thought there were none but positive Laws. There is a great deal of Difference between an Innate Law, and a Law of Nature; between something imprinted on our Minds in their very Original, and something that we, being ignorant of, may attain to the Knowledge of, by the Use and due Application of our natural Faculties. And I think they equally forsake the Truth, who, running into the contrary Extremes, either affirm an Innate Law, or deny that there is a Law, knowable by the Light of Nature, *i. e.* without the Help of positive Revelation.

§. 14. THE Difference there is amongst Men, in their Practical Principles, is so evident, that, I think, I need say no more to evince, that it will be impossible to find any Innate, moral Rules, by this Mark of general Assent: And 'tis enough to make one suspect, that the Supposition of such Innate Principles, is but an Opinion, taken up at pleasure; since those, who talk so confidently of them, are so sparing to tell us which they are. This might with justice be expected from those Men, *Those, who maintain Innate Practical Principles, tell us not what they are.*

who lay stress upon this Opinion: And it gives occasion to distrust, either their Knowledge, or Charity, who declaring, That God has imprinted on the Minds of Men, the Foundations of Knowledge, and the Rules of Living, are yet so little favourable to the Information of their Neighbours, or the Quiet of Mankind, as not to point out to them which they are, in the Variety Men are distract'd with. But, in truth, were there any such Innate Principles, there would be no need to teach them. Did Men find such Innate Propositions, stamped on their Minds, they would easily be able to distinguish them from other Truths, that they afterwards learned and deduced from them; and there would be nothing more easy, than to know what, and how many they were. There could be no more doubt about their Number, than there is about the Number of our Fingers; and 'tis like then, every System would be ready to give them us by Tale. But since no body, that I know, has ventured yet to give a Catalogue of them, they cannot blame those, who doubt of the Innate Principles; since even they, who require Men to believe, that there are such Innate Propositions, do not tell us what they are. 'Tis easy to foresee, that if different Men, of different Sects, should go about to give us a List of those Innate, Practical Principles, they would set down only such as suited their distinct Hypothesis, and were fit to support the Doctrines of their particular Schools, or Churches: A plain Evidence, that there are no such Innate Truths. Nay, a great Part of Men are so far from finding any such Innate moral Principles in themselves, that, by denying Freedom to Mankind, and thereby making Men no other than bare Machines, they take away not only Innate, but all moral Rules whatsoever, and leave not a Possibility to believe any such, to those who cannot conceive, how any thing can be capable of a Law, that is not a free Agent: And, upon that Ground, they must necessarily reject all Principles of Virtue, who cannot put *Morality and Mechanism together*; which are not very easy to be reconciled, or made consistent.

Lord Herbert's Innate Principles. §. 15. WHEN I had writ this, being informed that my Lord Herbert had, in his Books *de Veritate*,

ritate, assigned these Innate Principles, I presently consulted him, hoping to find, in a Man of so great Parts, something that might satisfy me in this Point, and put an end to my Enquiry. In his Chapter, *de Instinctu Naturali*, P. 76. edit. 1656. I met with these six Marks of his *Notitiae Communes*: 1. *Prioritas*. 2. *Independentia*. 3. *Universalitas*. 4. *Certitudo*. 5. *Necessitas*, i. e. as he explains it, faciunt ad hominis conversationem. 6. *Modus conformatio-*
ni, i. e. *Affensus*, nulla interposita mora. And at the latter End of his little Treatise, *De Religione Laici*, he says this, of these Innate Principles: *Adeo ut non uniuscujusvis Religionis confinio arreterentur, quæ ubique vigent veritates.* Sunt enim in ipsa mente cœlitus descriptæ, nullisque traditionibus, five scriptis, five non scriptis, obnoxiae, P. 3. And, *Veritates nostræ Catholiceæ, quæ, tanquam indubia Dei effata, in foro interiori descripta.* Thus having given the Marks of the Innate Principles, or Common Notions, and asserted their being imprinted on the Minds of Men, by the Hand of God, he proceeds to set them down; and they are these: 1. *Esse aliquod supremum numen*. 2. *Numen illud coli debere*. 3. *Virtutem, cum pietate conjunctam, optimam esse rationem cultus divini*. 4. *Resipiscendum esse a peccatis*. 5. *Dari præmium, vel pœnam, post hanc vitam transactam*. Tho' I allow these to be clear Truths, and such as, if rightly explained, a rational Creature can hardly avoid giving his Assent to; yet I think he is far from proving them Innate Impressions, *in foro interiori descriptæ*. For I must take leave to observe,

§. 16. First, THAT these five Propositions are either not all, or more than all, those common Notions, writ on our Minds by the Finger of God, if it were reasonable to believe any at all to be so written: Since there are other Propositions, which, even by his own Rules, have as just a Pretence to such an Original, and may be as well admitted for Innate Principles, as at least, some of these five he enumerates, viz. *Do, as thou wouldst be done unto*: And, perhaps, some hundreds of others, when well considered.

§. 17. Secondly, THAT all his Marks are not to be found in each of his five Propositions, viz. his first, second, and third

Marks, agree perfectly to neither of them; and the first, second, third, fourth, and sixth Marks, agree but ill to his third, fourth, and fifth Propositions. For, besides that we are assured from History, of many Men, nay, whole Nations, who doubt, or disbelieve some, or all of them; I cannot see how the third, *viz. That Virtue, join'd with Piety, is the best Worship of God*, can be an Innate Principle, when the Name, or Sound, *Virtue*, is so hard to be understood; liable to so much Uncertainty in its Signification; and the Thing it stands for, so much contended about, and difficult to be known. And therefore, this can be but a very uncertain Rule of Human Practice, and serve but very little to the Conduct of our Lives, and is therefore, very unfit to be assigned as an Innate Practical Principle.

§. 18. FOR let us consider this Proposition, as to its Meaning, (for it is the Sense, and not Sound, that is, and must be the Principle, or common Notion) *viz. Virtue is the best Worship of God*, i. e. is most acceptable to him; which, if *Virtue* be taken, as most commonly it is, for those Actions, which, according to the different Opinions of several Countries, are accounted laudible, will be a Proposition so far from being certain, that it will not be true. If *Virtue* be taken for Actions conformable to God's Will, or to the Rule prescribed by God, which is the true and only Measure of Virtue, when *Virtue* is used to signify what is, in its own Nature right, and good; then this Proposition, *That Virtue is the best Worship of God*, will be most true and certain, but of very little use in Human Life: Since it will amount to no more but this, *viz. That God is pleased with the doing of what he commands*; which a Man may certainly know to be true, without knowing what it is that God doth command; and so be as far from any Rule, or Principle of his Actions, as he was before. And I think very few will take a Proposition, which amounts to no more than this, *viz. That God is pleased with the doing of what he himself commands*, for an Innate moral Principle, writ on the Minds of all Men, (however true and certain it may be) since it teaches so little. Whosoever does so, will have reason to think Hundreds of Propositions, Innate Principles; since there are many, which have as good a Title as this,

to be received for such, which no body yet ever put into that Rank of Innate Principles.

§. 19. NOR is the fourth Proposition (*viz. Men must repent of their Sins*) much more instructive, till what those Actions are, that are meant by Sins, be set down. For the Word *Peccata*, or *Sins*, being put, as it usually is, to signify in general, ill Actions, that will draw Punishment upon the Doers; what great Principle of Morality can that be, to tell us, we should be sorry, and cease to do that which will bring mischief upon us, without knowing what those particular Actions are, that will do so? Indeed, this is a very true Proposition, and fit to be inculcated on, and received by, those who are supposed to have been taught, what Actions in all kinds are *Sins*: But neither this, nor the former, can be imagined to be Innate Principles; nor to be of any Use, if they were Innate; unless the particular Measures and Bounds of all Virtues and Vices, were engraven in Mens Minds, and were Innate Principles also, which, I think, is very much to be doubted. And, therefore, I imagine, it will scarce seem possible, that God should engrave Principles in Mens Minds, in Words of uncertain Signification, such as *Virtues* and *Sins*, which, amongst different Men, stand for different Things: Nay, it cannot be supposed to be in Words at all; which being, in most of these Principles, very general Names, cannot be understood, but by knowing the Particulars comprehended under them. And, in the practical Instances, the Measures must be taken from the Knowledge of the Actions themselves, and the Rules of them, abstracted from Words, and antecedent to the Knowledge of Names; which Rules a Man must know, what Language soever he chance to learn, whether *English*, or *Japanese*, or if he should learn no Language at all, or never should understand the use of Words, as happens in the case of dumb and deaf Men. When it shall be made out, that Men, ignorant of Words, or untaught by the Laws and Customs of their Country, know that it is part of the Worship of God, Not to kill another Man; Not to know more Women than one; Not to procure Abortion; Not to expose their Children; Not to take from another what is his, tho' we want it ourselves; but, on the contrary, relieve and supply

ply his Wants; and, whenever we have done the contrary, we ought to repent, be sorry, and resolve to do so no more: When, I say, all Men shall be proved actually to know, and allow all these, and a thousand other such Rules, all which come under these two general Words, made use of above, *viz. Virtutes and Pecata, Virtues and Sins*, there will be more reason for admitting these, and the like, for common Notions, and Practical Principles. Yet, after all, universal Consent (were there any in moral Principles) to Truths, the Knowledge whereof may be attained otherwise, would scarce prove them to be Innate; which is all I contend for.

*Obj. Innate
Principles may
be corrupted,
and answered.*

§. 20. NOR will it be of much moment here, to offer that very ready, but not very material Answer, (*viz.*) That the *Innate Principles of Morality, may, by Education, and Custom*, and

the general Opinion of those, amongst whom we converse, *be darkned*, and, at last, *quite worn out* of the Minds of Men. Which Assertion of theirs, if true, quite takes away the Argument of universal Consent, by which this Opinion of Innate Principles is endeavoured to be proved; unless those Men will think it reasonable, that their private Persuasions, or that of their Party, should pass for universal Consent; a Thing not unfrequently done, when Men, presuming themselves to be the only Masters of right Reason, cast by the Votes and Opinions of the rest of Mankind, as not worthy the reckoning. And then their Argument stands thus: The Principles, which all Mankind allow for true, are Innate; those, that Men of right Reason admit, are the Principles allowed by all Mankind: We, and those of our own Mind, are Men of Reason; therefore, we agreeing, our Principles are Innate: Which is a very pretty way of arguing, and a short Cut to Infalibility. For, otherwise, it will be very hard to understand, how there be some Principles, which all Men do acknowledge, and agree in; and yet there are none of those *Principles*, which are *not*, by *depraved Custom, and ill Education, blotted out* of the Minds of many Men; which is to say, That all Men admit, but yet many Men do deny and dissent from them. And, indeed, the Supposition of such first Principles will serve us to very little Purpose; and we

shall

shall be as much at a loss with, as without them, if they may, by any Human Power, such as is the Will of our Teachers, or Opinions of our Companions, be altered, or lost in us: And notwithstanding all this Boast of first Principles, and Innate Light, we shall be as much in the Dark, and Uncertainty, as if there were no such thing at all; it being all one, to have no Rule, and one that will warp any way; or amongst various and contrary Rules, not to know which is the right. But, concerning Innate Principles, I desire these Men to say, whether they can, or cannot, by Education and Custom, be blurr'd and blotted out: If they cannot, we must find them in all Mankind alike, and they must be clear in every body: And if they may suffer Variation, from adventitious Notions, we must then find them clearest and most perspicuous, nearest the Fountain, in Children, and Illiterate People, who have received least Impression from foreign Opinions. Let them take which Side they please, they will certainly find it inconsistent with visible Matter of Fact, and daily Observation.

§. 21. I EASILY grant, that there are great Contrary Principles in the Numbers of *Opinions*, which, by Men of different Countries, Educations and Tempers, are *World.*

received and embraced, as *first and unquestionable Principles*; many whereof, both for their Absurdity, as well as Opposition one to another, it is impossible should be true. But yet all those Propositions, how remote soever from Reason, are so sacred, somewhere or other, that Men, even of good Understanding in other Matters, will sooner part with their Lives, and whatever is dearest to them, than suffer themselves to doubt, or others to question, the Truth of them.

§. 22. THIS, however strange it may seem, is How Men commonly come by that which every Day's Experience confirms; and will not, perhaps, appear so wonderful, if their Principles. we consider the *Ways and Steps*, by which it is brought about; and how really it may come to pass, that *Doctrines*, that have been derived from no better Original, than the Superstition of a Nurse, or the Authority of an old Woman, may, by Length of Time, and Consent of Neighbours, grow up to the Dignity of Principles

ciples in Religion, or Morality. For such, who are careful (as they called it) to principle Children well, (and few there be, who have not a Set of those Principles for them, which they believe in) instil into the unwary, and, as yet, unprejudiced Understanding, (for white Paper receives any Characters) those Doctrines, they would have them retain and profess. These being taught them, as soon as they have any Apprehension, and still, as they grow up, confirmed to them, either by the open Profession, or tacit Consent, of all they have to do with; or, at least, by those, of whose Wisdom, Knowledge, and Piety, they have an Opinion, who never suffer those Propositions to be otherwise mentioned, but as the Basis and Foundation, on which they build their Religion, or Manners, come, by these Means, to have the Reputation of Unquestionable, Self-evident, and Innate Truths.

§. 23. To which we may add, That when Men, so instructed, are grown up, and reflect on their own Minds, they cannot find any thing more antient there, than those Opinions, which were taught them, before their Memory began to keep a Register of their Actions, or date the Time, when any new Thing appeared to them; and therefore, make no Scruple to conclude, *That those Propositions, of whose Knowledge they can find in themselves no Original, were certainly the Impress of God and Nature upon their Minds*, and not taught them by any one else. These they entertain, and submit to, as many do to their Parents, with Veneration; not because it is natural; nor do Children do it, where they are not so taught; but because, having been always so educated, and having no Remembrance of the beginning of this Respect, they think it is natural.

§. 24. THIS will appear very likely, and almost unavoidably to come to pass, if we consider the Nature of Mankind, and the Constitution of Human Affairs; wherein *most Men cannot live, without employing their Time in the daily Labours of their Callings; nor be at quiet in their Minds, without some Foundation, or Principles, to rest their Thoughts on.* There is scarce any one so floating, and superficial in his Understanding, who hath not some reverenced Propositions, which are to him the Principles, on which he bottoms his Reasoning; and by which he judgeth of Truth and

and Falshood, Right and Wrong; which some, wanting Skill and Leisure, and others the Inclination; and some being taught, that they ought not to examine; there are few to be found, who are not exposed by their Ignorance, Laziness, Education, or Precipitancy, to take them upon Trust.

§. 25. THIS is evidently the Case of all Children and young Folks; and Custom, a greater Power than Nature, seldom failing to make them worship for Divine, what she hath inured them to bow their Minds, and submit their Understandings to, it is no wonder, that grown Men, either perplexed in the necessary Affairs of Life, or hot in the pursuit of Pleasures, should not seriously sit down to examine their own Tenets; especially, when one of their Principles is, That Principles ought not to be questioned. And, had Men Leisure, Parts, and Will, who is there almost, that dare shake the Foundations of all his past Thoughts and Actions, and endure to bring, upon himself, the Shame of having been a long time wholly in Mistake and Error? Who is there hardy enough to contend with the Reproach, which is every where prepared for those, who dare venture to dissent from the received Opinions of their Country, or Party? And where is the Man to be found, that can patiently prepare himself to bear the Name of Whimsical, Sceptical, or Atheist, which he is sure to meet with, who does, in the least, scruple any of the common Opinions? And he will be much more afraid to question those Principles, when he shall think them, as most Men do, the Standards set up by God in his Mind, to be the Rule, and Touchstone, of all other Opinions. And what can hinder him from thinking them Sacred, when he finds them the earliest of all his own Thoughts, and the most reverenced by others?

§. 26. IT is easy to imagine, how, by these means, it comes to pass, that Men worship the Idols, that have been set up in their Minds; grow fond of the Notions they have been long acquainted with there; and stamp the *Characters of Divinity upon Absurdities and Errors*, become zealous Votaries to Bulls and Monkeys; and contend too, fight, and die in defence of their Opinion. *Dum solos credit habendos esse Deos, quos ipse colit.* For since the reasoning Faculties of the Soul, which are almost

constantly,

constantly, tho' not always warily, nor wisely employ'd, would not know how to move, for want of a Foundation and Footing, in most Men; who, through Laziness, or Avocation, do not; or for want of Time, or true Helps, or for other Causes, cannot penetrate into the Principles of Knowledge, and trace Truth to its Fountain and Original; 'tis natural for them, and almost unavoidable, to take up with some borrowed Principles; which being reputed, and presumed, to be the evident Proofs of other things, are thought not to need any other Proof themselves. Whoever shall receive any of these into his Mind, and entertain them there, with the Reverence usually paid to Principles, never venturing to examine them, but accustoming himself to believe them, because they are to be believed, may take up from his Education, and the Fashions of his Country, any Absurdity for Innate Principles; and, by long poring on the same Object, so dim his Sight, as to take Monsters, lodged in his own Brain, for the Images of the Deity, and, the Workmanship of his Hands.

*Principles
must be exa-
mined.*

§. 27. By this Progress, how many there are, who arrive at Principles, which they believe Innate, may be easily observed, in the Variety of opposite Principles, held and contended for, by all sorts and degrees of Men. And he, that shall deny this to be the Method, wherein most Men proceed to the Assurance they have of the Truth and Evidence of their Principles, will, perhaps, find it a hard matter, any other way, to account for the contrary Tenets, which are firmly believed, confidently asserted, and which great Numbers are ready, at any time, to seal with their Blood. And, indeed, if it be the Privilege of Innate Principles, to be received upon their own Authority, without Examination, I know not what may not be believed, or how any one's Principles can be questioned. If they may, and ought to be examined, and tried, I desire to know how first and Innate Principles can be tried; or, at least, it is reasonable to demand the Marks and Characters, whereby the genuine, Innate Principles, may be distinguished from others; that so, amidst the great Variety of Pretenders, I may be kept from Mistakes, in so material a

Point

Point as this. When this is done, I shall be ready to embrace such welcome, and useful Propositions; and, till then, I may, with Modesty, doubt; since I fear universal Consent, which is the only one produced, will scarce prove a sufficient Mark to direct my Choice, and assure me of any Innate Principles. From what has been said, I think it past doubt, that there are no Practical Principles, wherein all Men agree; and, therefore, none Innate.

C H A P. IV.

*Other Considerations concerning Innate Principles,
both Speculative and Practical.*

§. 1. **H**A D those, who would persuade us, *Principles not Innate, unless their Ideas be Innate.*
that there are Innate Principles, not taken them together in gross, but considered separately the Parts, out of which those Propositions are made; they would not, perhaps, have been so forward to believe they were Innate: Since, if the *Ideas*, which made up those Truths, were not, it was impossible that the Propositions, made up of them, should be Innate, or our Knowledge of them be born with us. For, if the *Ideas* be not Innate, there was a Time, when the Mind was without those Principles; and then, they will not be Innate, but be derived from some other Original. For, where the *Ideas* themselves are not, there can be no Knowledge, no Assent, no Mental, or Verbal, Propositions about them.

§. 2. If we will attentively consider new-born Children, we shall have little Reason to think, that they bring many *Ideas* into the World with them. For, bating, perhaps, some faint *Ideas* of Hunger, and Thirst, and Warmth, and some Pains, which they may have felt in the Womb, there is not the least Appearance of any settled *Ideas* at all in them; especially of *Ideas*, answering the Terms, which make up those universal Propositions, that are esteemed Innate Principles. One may perceive how, by

Degrees, afterwards, *Ideas* come into their Minds; and that they get no more, nor no other, than what Experience, and the Observation of Things, that come in their Way, furnish them with; which might be enough to satisfy us, that they are not Original Characters, stamped on the Mind.

§. 3. *IT is impossible for the same Thing to be, and not to be,* is certainly (if there be any such) an Innate Principle. But can any one think, or will any one say, that *Impossibility* and *Identity*, are two Innate *Ideas*? Are they such as all Mankind have, and bring into the World with them? And are they those, that are the first in Children, and antecedent to all acquired ones? If they are Innate, they must needs be so. Hath a Child an *Idea* of *Impossibility* and *Identity*, before it has of *White* or *Black*, *Sweet* or *Bitter*? And is it from the Knowledge of this Principle, that it concludes, that Wormwood, rubbed on the Nipple, hath not the same Taste, that it used to receive from thence? Is it the actual Knowledge of, *Impossibile est idem esse, et non esse*, that makes a Child distinguish between its Mother and a Stranger; or that makes it fond of the one, and fly the other? Or does the Mind regulate itself, and its Assent, by *Ideas*, that it never yet had? Or the Understanding draw Conclusions from Principles, which it never yet knew, or understood? The Names *Impossibility* and *Identity*, stand for two *Ideas*, so far from being Innate, or born with us, that I think it requires great Care and Attention, to form them right in our Understandings. They are so far from being brought into the World with us, so remote from the Thoughts of Infancy and Childhood, that, I believe, upon Examination, it will be found, that many grown Men want them.

*Identity, and
Idea, Innate.*

§. 4. If *Identity* (to instance in that alone) be a native Impression, and, consequently, so clear and obvious to us, that we must needs know it, even from our Cradles; I would gladly be resolved, by one of seven, or seventy Years old, Whether a Man, being a Creature consisting of Soul and Body, be the same Man, when his Body is changed? Whether *Euphorbus* and *Pythagoras*, having had the same Soul, were the same Man, though they lived several Ages asunder? Nay, Whether the Cock too, which had the same Soul,

were

were not the same with both of them? Whereby, perhaps, it will appear, that our *Idea of Sameness* is not so settled and clear, as to deserve to be thought *Innate* in us. For, if those Innate *Ideas* are not clear and distinct, so as to be universally known, and naturally agreed on, they cannot be Subjects of universal and undoubted Truths; but will be the unavoidable Occasion of perpetual Uncertainty. For, I suppose, every one's *Idea of Identity* will not be the same that *Pythagoras*, and thousands others of his Followers have: And which then shall be the true? Which Innate? Or are there two different *Ideas of Identity*, both Innate?

§. 5. Nor let any one think, that the Questions, I have here proposed, about the *Identity* of Man, are bare, empty Speculations; which, if they were, would be enough to shew, that there was, in the Understandings of Men, *no Innate Idea of Identity*. He that shall, with a little Attention, reflect on the Resurrection, and consider, that Divine Justice shall bring to Judgment, at the Last Day, the very same Persons, to be happy, or miserable, in the other, who did well, or ill, in this Life; will find it, perhaps, not easy to resolve with himself, what makes the same Man, or wherein *Identity* consists: And will not be forward to think he, and every one, even Children themselves, have, naturally, a clear *Idea of it*.

§. 6. LET us examine that Principle of Mathematics, *viz. That the Whole is bigger than a Part.* This, I take it, is reckoned amongst Innate Principles. I am sure it has as good a Title as any to be thought so; which, yet, no body can think it to be, when he considers the *Ideas* it comprehends in it, *Whole* and *Part*, are perfectly relative: But the positive *Ideas*, to which they properly and immediately belong, are Extension and Number, of which, alone, *Whole* and *Part* are Relations. So that, if *Whole* and *Part* are Innate *Ideas*, Extension and Number must be so too; it being impossible to have an *Idea* of a Relation, without having any at all of the Thing, to which it belongs, and in which it is founded. Now, whether the Minds of Men have naturally imprinted on them the *Ideas* of Extension and Number, I leave to be considered by those,

*Whole and Part
not Innate
Ideas.*

who are the Patrons of Innate Principles.

Idea of Worship not Innate.

§. 7. THAT God is to be worshipped, is, without doubt, as great a Truth as any can enter into the Mind of Man, and deserves the first Place amongst all Practical Principles; but yet it can, by no means, be thought Innate, unless the Ideas of God, and Worship are Innate. That the Idea, the Term Worship stands for, is not in the Understanding of Children, and a Character stamped on the Mind, in its first Original, I think, will be easily granted by any one, that considers how few there be amongst grown Men, who have a clear and distinct Notion of it. And, I suppose, there cannot be any thing more ridiculous, than to say, that Children have this Practical Principle Innate, *That God is to be Worshipped*; and yet, that they know not what that Worship of God is, which is their Duty. But to pass by this:

Idea of God not Innate.

§. 8. IF any Idea can be imagined Innate, the Idea of God may, of all others, for many Reasons, be thought so; since it is hard to conceive, how there should be Innate moral Principles, without an Innate Idea of a Deity. Without a Notion of a Law-maker, it is impossible to have a Notion of a Law, and an Obligation to observe it. Besides the Atheists, taken notice of, amongst the Antients, and left branded upon the Records of History, hath not Navigation discovered, in these later Ages, whole Nations, as the Bay of Soldania (a), in Brasil (b), in Boranday (c), and the Caribbee Islands, &c.

amongst whom there was to be found no Notion of a God, no Religion? Nicholaus del Techo, in literis ex Paraquaria, de Caaignarum conversione, has these Words: (d) Reperi eam gentem nullum nomen habere, quod Deum et hominis animam significet, nulla sacra habet, nulla Idola. These are Instances of Nations, where uncultivated Nature has been left to itself, without the Help of Letters, and Discipline, and the Improvements of Arts and Sciences. But there are others to be found, who have enjoy'd these, in a very great Measure; who, yet, for want of a due Application of their Thoughts this way, want the Idea

and

and Knowledge of God. 'Twill, I doubt not, be a Surprize to others, as it was to me, to find the *Siamites* of this Number. But, for this, let them consult the King of *France's* late Envoy thither (e), who gives no better Account of the *Chineses* themselves (f). And, if we will not believe *La Loubere*, the Missionaries of *China*, even the Jesuits themselves, the great Encomiasts of the *Chineses*, do all, to a Man, agree, and will convince us, that the Sect of the *Literati*, or *Learned*, keeping to the old Religion of *China*, and the ruling Party there, are all of them *Atheists*. Voyages, Vol. I. and *Historia cultus Sinensium.*] And, perhaps, if we should, with Attention, mind the Lives and Discourses of People, not so far off, we should have too much Reason to fear, that many, in more civilized Countries, have no very strong and clear Impressions of a Deity upon their Minds; and that the Complaints of Atheism, made from the Pulpit, are not without Reason. And, tho' only some profligate Wretches own it too barefacedly now; yet, perhaps, we should hear more, than we do of it, from others, did not the Fear of the Magistrate's Sword, or their Neighbour's Censure, tie up Peoples Tongues: Which, were the Apprehensions of Punishment, or Shame, taken away, would as openly proclaim their *Atheism*, as their Lives do. (2.)

§. 9. But

(2) ON this Reasoning of the Author against Innate Ideas, great Blame hath been laid; because it seems to invalidate an Argument, commonly used to prove the Being of a God, viz. *Universal Consent*: To which our Author + answers, *I think that the Universal Consent of Mankind, as to the Being of a God, amounts to thus much, That the vastly greater Majority of Mankind, have, in all Ages of the World, actually believed a God; that the Majority of the remaining Part have not actually disbelieved it; and, consequently, those, who have actually opposed the Belief of a God, have truly been very few.* So that, comparing those, that have actually disbelieved, with those who have actually believed a God, their Number is so inconsiderable, that, in respect of this incomparably greater Majority of those, who have owned the Belief of a God, it may be said to be the *Universal Consent* of Mankind.

+ In his Third Letter to the Bishop of Worcester, P. 147, &c.

§. 9. But had all Mankind, every where, a *Notion of a God*, (whereof, yet, History tells us the contrary) it would *not* from thence follow, that the *Idea* of Him was *Innate*. For, tho' no Nation were to be found without a Name, and some few dark Notions of Him; yet that would not prove them to be natural Impressions on the Mind, no more than the Names of Fire, or the Sun, Heat, or Number, do prove the *Ideas* they stand for, to be Innate: Because the Names of those Things, and the *Ideas* of them, are so universally received and known amongst Mankind. Nor, on the contrary, is the Want of such a Name, or the Absence of such a Notion, out of Mens Minds, any Argument against

THIS is all the *Universal Consent*, which Truth, or Matter of Fact, will allow; and, therefore, all that can be made use of, to prove a God. But, if any one would extend it farther, and speak deceitfully for God: If this Universality should be urged in a strict Sense, not for much the Majority, but for a general *Consent* of every one, even to a Man, in all Ages and Countries; this would make it either no Argument, or a perfectly useless and unnecessary one. For, if any one deny a God, such a perfectly Universality of Consent is destroy'd; and if no body does deny a God, what need of Arguments to convince *Atheists*?

I WOULD crave Leave to ask your Lordship, Were there ever in the World any *Atheists*, or no? If there were not, what need is there of raising a Question, about the Being of a God, when no body questions it? What need of provisional Arguments against a Fault, from which Mankind are so wholly free; and which, by an *Universal Consent*, they may be presumed to be secure from? If you say, (as I doubt not, but you will) that there have been *Atheists* in the World, then your Lordship's *Universal Consent* reduces itself to only a great Majority; and then make that Majority as great as you will, what I have said in the Place quoted by your Lordship, leaves it in its full Force; and I have not said one Word, that does, in the least, *invalidate this Argument* for a God. The Argument I was upon there, was to shew, that the *Idea* of God was not Innate; and to my Purpose it was sufficient, if there were but a less Number found in the World, who had no *Idea* of God, than your Lordship will allow, there have been, of professed *Atheists*; for whatsoever is Innate, must be Universal in the strictest Sense. One Exception is a sufficient Proof against it. So that all, that I said, and which was quite to another Purpose, did not at all tend, nor can be made use of, to *invalidate the Argument* for a Deity, grounded on such an *Universal Consent*, as your Lordship, and all that build on it, must own; which is only a very disproportioned Majority:

gainst the Being of a God, any more than it would be a Proof, that there was no Loadstone in the World, because a great Part of Mankind had neither a Notion of any such thing, nor a Name for it; or be any Shew of Argument to prove, that there are no distinct and various Species of Angels, or intelligent Beings above us, because we have no Ideas of such distinct Species, or Names for them: For Men, being furnished with Words, by the common Language of their own Countries, can scarce avoid having some kind of Ideas of those things, whose Names, those, they converse with, have occasion frequently to mention to them. And, if it carry with it the Notion of Excellency, Greatness, or something extraordinary;

if

Majority: Such an *Universal Consent*, my Argument there, neither affirms, nor requires, to be less, than you will be pleased to allow it. Your Lordship, therefore, might, without any Prejudice to those Declarations of Good-will and Favour you have, for the Author of the *Essay of Human Understanding*, have spared the mentioning his quoting Authors, that are in Print, for Matters of Fact, to quite another Purpose, as going about to invalidate the Argument for a Deity, from the *Universal Consent of Mankind*; since he leaves that *Universal Consent*, as entire, and as large, as you yourself do, or can own, or suppose it. But here I have no Reason to be sorry, that your Lordship has given me this Occasion, for the Vindication of this Passage of my Book; if there should be any one, besides your Lordship, who should so far mistake it, as to think it, in the least, invalidates the Argument for a God, from the *Universal Consent of Mankind*.

BUT because you question the Credibility of those Authors I have quoted, which, you say, were very ill chosen; I will crave leave to say, That he, whom I relied on, for his Testimony, concerning the *Hottentots of Soldania*, was no less a Man, than an Ambassador from the King of England, to the *Great Mogul*. Of whose Relation, Monsieur *Thevenot*, no ill Judge in the *Cafe*, had so great an Esteem, that he was at the pains to translate it into *French*, and publish it in his (which is counted no injudicious) Collection of *Travels*. But to intercede with your Lordship, for a little more favourable Allowance of Credit, to Sir *Thomas Roe's* Relation; *Coore*, an Inhabitant of the Country, who could speak *English*, assured † Mr. *Terry*, That they of *Soldania* had no God. But if he too have the ill luck to find no Credit with you, I hope you will be a little more favourable to a *Dive* of the Church of *England*, now living, and admit of his Testimony, in confirmation of Sir *Thomas Roe's*. This worthy Gentleman, in the Relation of his *Voyage to Surat*, printed but two Years since,

† *Terry's Voyage, P. 17. and 23.*

if Apprehension and Concernment accompany it; if the Fear of absolute and irresistible Power set it on upon the Mind; the *Idea* is likely to sink the deeper, and spread the farther; especially, if it be such an *Idea*, as is agreeable to the common Light of Reason, and naturally deducible from every part of our Knowledge, as that of a God is. For the visible Marks of extraordinary Wisdom and Power appear so plainly, in all the Works of the Creation, that a rational Creature, who will but seriously reflect on them, cannot miss the Discovery of a *Deity*. And the Influence, that the Discovery of such a Being must necessarily have on the Minds of all, that have but once heard of it, is so great, and carries

* M. Ovington, P. 489. since, speaking of the same People, has these Words : * They are sunk even below Idolatry, are destitute of both Priest and Temple, and, saving a little shew of Rejoicing, which is made at the Full and New Moon, have lost all kind of Religious Devotion. Nature has so richly provided for their Convenience in this Life, that they have drowned all Sense of the God of it, and are grown quite careless of the next.

BUT, to provide against the clearest Evidence of *Atheism*, in these People, you say, *That the Account given of them, makes them not fit to be a Standard for the Sense of Mankind.* This, I think, may pass for nothing, till somebody be found, that makes them to be a Standard for the Sense of Mankind. All the Use, I have made of them, was to shew, That there were Men in the World, that had no Innate Idea of a God. But, to keep something of an Argument going, (for what will not that do?) you go near denying those *Cafers* to be Men. What else do these Words signify? *A People so strangely bereft of common Sense, that they can hardly be reckoned among Mankind; as appears by the best Accounts of the Cafers of Soldania, &c.* I hope, if any of them were called *Peter, James, or John*, it would be past scruple, that they were Men: However, *Courvee, Wevena, and Cowshed*, and those others, who had Names, that had no Place in your *Nomenclator*, would hardly pass Muster with your Lordship.

My Lord, I should not mention this, but that what you yourself say here, may be a Motive to you to consider, That, what you have laid such a Stress on, concerning the general *Nature of Man*, as a *real Being*, and the *Subject of Properties*, amounts to nothing, for the distinguishing of *Species*; since you yourself own, that there may be *Individuals*, wherein there is a common *Nature*, with a particular *Subsistence*, proper to each of them; wherein you are so little able to know, of which of the *Ranks*, or *Sorts*, they are, into which you say, *God has ordered Beings*, and which he hath distinguished by *essential Properties*, that you are in doubt, whether they ought to be reckon'd among *Mankind*, or no.

ries such a Weight of Thought and Communication with it, that it seems stranger to me, that a whole Nation of Men should be, any where, found so brutish, as to want the Notion of a God; than that they should be without any Notion of Numbers, or Fire.

§. 10. THE Name of God being once mentioned, in any part of the World, to express a superior, powerful, wise, invisible Being, the Suitableness of such a Notion to the Principles of common Reason, and the Interest Men will always have to mention it often, must necessarily spread it far and wide, and continue it down to all Generations; tho', yet, the general Reception of this Name, and some imperfect and unsteady Notions, conveyed thereby, to the unthinking Part of Mankind, prove not the Idea to be Innate; but only that they, who made the Discovery, had made a right Use of their Reason, thought maturely of the Causes of Things, and traced them to their Original; from whom other, less considering People, having once received so important a Notion, it could not easily be lost again.

§. 11. THIS is all could be inferr'd from the Notion of a GOD, were it to be found universally, in all the Tribes of Mankind, and generally acknowledged, by Men grown to Maturity, in all Countries. For the Generality of the acknowledging of a God, as I imagine, is extended no farther than that; which, if it be sufficient to prove the *Idea of God Innate*, will as well prove the *Idea of Fire Innate*: Since, I think, it may truly be said, That there is not a Person in the World, who has a Notion of a God, who has not also the *Idea of Fire*. I doubt not, but if a Colony of young Children should be placed in an Island, where no Fire was, they would certainly neither have any Notion of such a Thing, nor Name for it; how generally soever it were received, and known in all the World besides: And, perhaps too, their Apprehensions would be as far removed from any Name, or Notion of a God, 'till some one amongst them had employed his Thoughts, to enquire into the Constitution and Causes of Things, which would easily lead him to the Notion of a God: Which, having once taught to others, Reason, and the natural Propensity of their own Thoughts, would afterwards propagate, and continue amongst them.

*Suitable to
GOD's Good-
ness, that all
Men should
have an Idea
of Him, there-
fore naturally
imprinted by
him, answered.*

§. 12. INDEED it is urged, that it is *suitable to the Goodness of God, to imprint, upon the Minds of Men, Characters, and Notions of Himself*, and not to leave them in the Dark, and Doubt, in so grand a Concernment; and also, by that means, to secure to Himself the Homage and Veneration due from so intelligent a Creature as Man; and therefore He has done it.

THIS Argument, if it be of any force, will prove much more than those, who use it in this Case, expect from it. For, if we may conclude, that *God* hath done for Men, all that Men shall judge is best for them, because it is suitable to His Goodness so to do; it will prove, not only that God has imprinted on the Minds of Men, an *Idea of Himself*, but that He hath plainly stamped there, in fair Characters, all that Men ought to know, or believe of Him, all that they ought to do, in obedience to His Will; and that He hath given them a Will, and Affections conformable to it. This, no doubt, every one will think it better for Men, than that they should, in the Dark, grope after Knowledge, as St. Paul tells us, all Nations did after God, *Acts xvii. 27.* than that their Wills should clash with their Understandings, and their Appetites cross their Duty. The *Romanists* say, 'Tis best for Men, and so, suitable to the Goodness of God, that there should be an infallible Judge of Controversies on Earth; and therefore there is one. And I, by the same Reason, say, 'Tis better for Men, that every Man himself should be infallible. I leave them to consider, whether, by the force of this Argument, they shall think, that every Man is so. I think it a very good Argument, to say, the infinitely wise God hath made it so: And therefore it is best. But it *seems to me a little too much Confidence of our own Wisdom, to say, I think it best, and therefore God hath made it so.* And, in the Matter in hand, it will be in vain to argue from such a Topic, that God hath done so, when certain Experience shews us that He hath not. But the Goodness of God hath not been wanting to Men, without such original Impressions of Knowledge, or *Ideas* stamped on the Mind: Since He hath furnished Man with those Faculties, which will serve for the

the sufficient Discovery of all things, requisite to the End of such a Being. And I doubt not but to shew, that a Man, by the right Use of his natural Abilities, may, without any Innate Principles, attain the Knowledge of a God, and other things that concern him. . God, having endued Man with those Faculties of knowing which he hath, was no more obliged, by His Goodness, to implant those Innate Notions in his Mind, than that, having given him Reason, Hands, and Materials, He should build him Bridges, or Houses; which some People in the World, however, of good Parts, do either totally want, or are but ill provided of; as well as others are wholly without *Ideas of God*, and Principles of Morality; or, at least, have but very ill ones. The Reason, in both Cases, being, That they never employed their Parts, Faculties, and Powers, industriously, that way, but contented themselves with the Opinions, Fashions, and Things of their Country, as they found them, without looking any farther. Had you, or I, been born at the Bay of *Soldania*, possibly our Thoughts and Notions had not exceeded those brutish ones of the *Hotentots*, that inhabit there: And had the *Virginia* King *Apochancana* been educated in *England*, he had, perhaps, been as knowing a Divine, and as good a Mathematician, as any in it. The Difference between him, and a more improv'd *Englishman*, lying barely in this, that the Exercise of his Faculties was bounded within the Ways, Modes, and Notions of his own Country, and never directed to any other, or farther Enquiries: And, if he had not any *Idea* of a God, it was only, because he pursued not those Thoughts that would have led him to it.

§. 13. I GRANT, That, if there were any *Ideas* Ideas of GOD to be found, *imprinted* on the Minds of Men, various, in different Men. we have Reason to expect, *it should be the Nutrition of his Maker*, as a Mark GOD set on His own Workmanship, to mind Man of his Dependence and Duty; and that herein should appear the first Instances of human Knowledge. But how late is it, before any such Notion is discoverable in Children? And, when we find it there, how much more does it resemble the Opinion and Notion of the Teacher, than represent the

the true God? He, that shall observe in Children the Progress, whereby their Minds attain the Knowledge they have, will think that the Objects, they do first, and most familiarly converse with, are those that make the first Impressions on their Understandings: Nor will he find the least Footsteps of any other. It is easy to take notice, how their Thoughts enlarge themselves, only as they come to be acquainted with a greater variety of sensible Objects, to retain the *Ideas* of them in their Memories; and to get the Skill to compound and enlarge them, and several ways put them together. How, by these means, they come to frame in their Minds an *Idea* Men have of a Deity, I shall hereafter shew.

§. 14. CAN it be thought, that the *Ideas* Men have of God, are the Characters and Marks of Himself, engraven in their Minds, by His own Finger: When we see that, in the same Country, under one and the same Name, *Men have far different, nay, often contrary and inconsistent Ideas and Conceptions of Him?* Their agreeing in a Name, or Sound, will scarce prove an Innate Notion of Him.

§. 15. WHAT true, or tolerable, Notion of a *Deity* could they have, who acknowledged, and worshipped, Hundreds? Every Deity, that they owned above one, was an infallible Evidence of their Ignorance of Him, and a Proof that they had no true Notion of God, where Unity, Infinity, and Eternity, were excluded. To which, if we add their gross Conceptions of Corporeity, expressed in their Images, and Representations of their Deities; the Amours, Marriages, Copulations, Lusts, Quarrels, and other mean Qualities, attributed by them to their gods; we shall have little reason to think, that the Heathen World, *i. e.* the greatest Part of Mankind, had such *Ideas* of God in their Minds, as He Himself, out of Care that they should not be mistaken about Him, was Author of. And this Universality of Consent, so much argued, if it prove any native Impressions, 'twill be only this, That God imprinted on the Minds of all Men, speaking the same Language, a Name for Himself, but not any *Idea*; since those People, who agreed in the Name, had, at the same time, far different Apprehensions about the Thing signified. If they say, That the Variety of Deities, worshiped

by

by the Heathen World, were but figurative Ways of expressing the several Attributes of that incomprehensible Being, or several Parts of His Providence: I answer, what they might be in their Original, I will not here enquire; but that they were so, in the Thoughts of the Vulgar, I think no body will affirm. And he that will consult the Voyage of the Bishop of *Beryte*, C. 13. (not to mention other Testimonies) will find, that the Theology of the *Siamites* professedly owns a Plurality of Gods: Or, as the *Abbé de Choisy* more judiciously remarks, in his *Journal du Voyage de Siam*, $\frac{107}{177}$, it consists properly in acknowledging no God at all.

If it be said, That *Wise Men*, of all Nations, came to have true Conceptions of the Unity and Infinity of the Deity, I grant it. But then this,

First, EXCLUDES Universality of Consent in any Thing, but the Name; for those Wise Men, being very few, perhaps one of a Thousand, this Universality is very narrow.

Secondly, It seems to me plainly to prove, that the truest and best Notions Men had of God, were not imprinted, but acquired by Thought and Meditation, and a right Use of their Faculties; since the wise and considerate Men of the World, by a right and careful Employment of their Thoughts and Reason, attained true Notions in this, as well as other Things; whilst the lazy and inconsiderate Part of Men, making the far greater Number, took up their Notions by chance, from common Tradition, and vulgar Conceptions, without much beating their Heads about them. And, if it be a Reason to think the *Notion of God Innate*, because all wise Men had it, Virtue too must be thought Innate, for that also wise Men have always had.

§. 16. THIS was evidently the Case of all *Gentilism*: Nor hath, even amongst *Jews*, *Christians*, and *Mahometans*, who acknowledge but one God, this Doctrine, and the Care taken in those Nations, to teach Men to have true Notions of a GOD, prevailed so far, as to make Men to have the same, and true Ideas of Him. How many, even amongst us, will be found, upon Enquiry, to fancy Him in the Shape of a Man, sitting in Heaven, and to have many other absurd and unfit Conceptions of Him?

Christians

Christians, as well as *Turks*, have had whole Sects, owning and contending earnestly for it, that the Deity was corporeal, and of human Shape: And tho' we find few, amongst us, who profess themselves *Anthropomorphites*, (tho' some I have met with, that own it) yet, I believe, he that will make it his Business, may find, amongst the ignorant and uninstructed Christians, many of that Opinion. Talk but with Country-People, almost of any Age, or young People, almost of any Condition, and you shall find, that, tho' the Name of G O D be frequently in their Mouths; yet the Notions, they apply this Name to, are so odd, low, and pitiful, that no body can imagine they were taught by a rational Man, much less that they were Characters, writ by the Finger of God Himself. Nor do I see how it derogates more from the Goodness of God, that He has given us Minds unfurnished, with these *Ideas* of Himself, than that He hath sent us into the World with Bodies unclothed, and that there is no Art, or Skill, born with us: For, being fitted with Faculties to attain these, it is want of Industry, and Consideration in us, and not of Bounty in Him, if we have them not. 'Tis as certain, that there is a God, as that the opposite Angles, made by the Intersektion of two straight Lines, are equal. There was never any rational Creature, that set himself, sincerely, to examine the Truth of these Propositions, that could fail to assent to them; tho' yet it be past doubt, that there are many Men, who, having not applied their Thoughts that way, are ignorant both of the one and the other. If any one think fit to call this (which is the utmost of its Extent) Universal Consent, such an one I easily allow; but such an Universal Consent as this, proves not the *Idea of God*, no more than it does the *Idea of such Angles, Inmate*.

If the Idea of
God be not In-
nate, no other
can be supposed
Innate.

§. 17. SINCE then, tho' the Knowledge of a GOD be the most natural Discovery of human Reason, yet the *Idea of Him* is not *Inmate*, as I think, is evident from what has been said; I imagine there will scarce be any other *Idea* found, that can pretend to it: Since, if God had set any Impression, any Character, on the Understanding of Men, it is most reasonable

able to expect, it should have been some clear and uniform *Idea* of Himself, as far as our weak Capacities were capable to receive so incomprehensible and infinite an Object. But our Minds, being at first void of that *Idea*, which we are most concerned to have, it is a strong Presumption against all other Innate Characters. I must own, as far as I can observe, I can find none, and would be glad to be informed by any other.

§. 18. I CONFESS there is another *Idea*, which would be of general Use for Mankind to have, as it is of general Talk, as if they had it; and that is the *Idea of Substance*, which we neither have, nor can have, by *Sensation, or Reflexion*. If Nature took care to provide us any *Ideas*, we might well expect they should be such, as by our own Faculties, we cannot procure to ourselves: But we see, on the contrary, that since, by those Ways, whereby other *Ideas* are brought into our Minds, this is not; we have no such clear *Idea* at all, and, therefore, signify nothing, by the Word *Substance*, but only an uncertain Supposition of we know not what, (*i.e.* of something, whereof we have no particular, distinct, positive) *Idea*, which we take to be the *Substratum*, or Support of those *Ideas*, we do know.

§. 19. WHATEVER then we talk of Innate, either *Speculative*, or *Practical Principles*, it may, with as much Probability, be said, that a Man hath 100*l. Sterling* in his Pocket, and, yet, denieth that he hath either Penny, Shilling, Crown, or any other Coin, out of which the Sum is to be made up; as to think, that certain Propositions are Innate, when the *Ideas*, about which they are, can, by no means, be supposed to be so. The general Reception, and Assent, that is given, doth not at all prove, that the *Ideas*, expressed in them, are *Innate*: For, in many Cases, however the *Ideas* came there, the Assent to Words, expressing the Agreement, or Disagreement, of such *Ideas*, will necessarily follow. Every one, that hath a true *Idea of God, and Worship*, will assent to this Proposition, that God is to be worshipped, when expressed in a Language he understands: And every rational Man, that hath not thought on it To-day, may be ready

Idea of Substance, not Innate.

No Propositions can be Innate, since no Ideas are Innate.

to assent to this Proposition To-morrow; and, yet, Millions of Men may be well supposed to want one, or both, of those *Ideas* To-day. For, if we will allow Savages, and most Country-People, to have *Ideas* of *God*, and *Worship*, (which Conversation with them will not make one forward to believe) yet, I think, few Children can be supposed to have those *Ideas*, which, therefore, they must begin to have some time or other: And then they will also begin to assent to that Proposition, and make very little question of it ever after. But such an Assent, upon Hearing, no more proves the *Ideas* to be Innate, than it does, that one born Blind (with Cataracts, which will be couched To-morrow) had the Innate *Ideas* of the Sun, or Light, or Saffron, or Yellow; because, when his Sight is cleared, he will certainly assent to this Proposition, That the Sun is Lucid, or that Saffron is Yellow: And, therefore, if such an Assent, upon Hearing, cannot prove the *Ideas* Innate, it can much less the Propositions, made up of those *Ideas*. If they have any Innate *Ideas*, I would be glad to be told what, and how many they are.

No Innate Ideas in the Memory. §. 20. To which let me add: If there be any *Innate Ideas*, any *Ideas* in the Mind, which the Mind does not actually think on, they must be lodg'd in the Memory, and from thence must be brought into View by Remembrance; *i e.* must be known, when they are remembred, to have been Perceptions in the Mind before, unless Remembrance can be without Remembrance. For, to remember, is to perceive any thing with Memory, or with a Consciousness, that it was known, or perceived before: Without this, whatever *Idea* comes into the Mind, is new, and not remembred: This Consciousness, of its having been in the Mind before, being that which distinguishes remembring from all other Ways of Thinking. Whatever *Idea* was never perceived by the Mind, was never in the Mind. Whatever *Idea* is in the Mind, is either an actual Perception; or else, having been an actual Perception, is so in the Mind, that, by the Memory, it can be made an actual Perception again. Whenever there is the actual Perception of an *Idea*, without Memory, the *Idea* appears perfectly new, and unknown before to the Understanding.

Whenever

Whenever the Memory brings any *Idea* into actual View, it is with a Consciousness, that it had been there before, and was not wholly a Stranger to the Mind. Whether this be not so, I appeal to every one's Observation: And then I desire an Instance of an *Idea*, pretended to be Innate, which (before any Impression of it, by Ways hereafter to be mentioned) any one could revive and remember, as an *Idea* he had formerly known, without which Consciousness of a former Perception, there is no Remembrance; and whatever *Idea* comes into the Mind, without that Consciousness, is not remembred, or comes not out of the Memory, nor can be said to be in the Mind, before that Appearance: For what is not either actually in View, or in the Memory, is in the Mind no way at all, and is all one, as if it never had been there. Suppose a Child had the Use of his Eyes, till he knows and distinguishes Colours; but then Cataracts shut the Windows, and he is forty, or fifty, Years perfectly in the dark; and, in that Time, perfectly loses all Memory of the *Ideas* of Colours he once had. This was the Case of a blind Man I once talked with, who lost his Sight by the Small-Pox, when he was a Child, and had no more Notion of Colours, than one born blind. I ask, whether any one can say, this Man had then any *Ideas* of Colours in his Mind, any more than one born blind? And, I think, no body will say, that either of them had, in his Mind, any *Idea* of Colours at all. His Cataracts are couch'd, and then he has the *Ideas* (which he remembers not) of Colours, *de novo*, by his restored Sight, convey'd to his Mind, and that without any Consciousness of a former Acquaintance; and these now he can revive, and call to mind in the dark. In this Case, all these *Ideas* of Colours, which, when out of View, can be revived, with a Consciousness of a former Acquaintance, being thus in the Memory, are said to be in the Mind. The Use I make of this, is, that whatever *Idea*, being not actually in View, is in the Mind, is there only by being in the Memory; and, if it be not in the Memory, it is not in the Mind; and, if it be in the Memory, it cannot, by the Memory, be brought into actual View, without a Perception that it comes out of the Memory; which is this, that it had been known before, and is now remembred. If, therefore, there

be any Innate *Ideas*, they must be in the Memory, or else nowhere in the Mind; and, if they be in the Memory, they can be revived, without any Impression from without; and, whenever they are brought into the Mind, they are remembred, *i. e.* they bring with them a Perception of their not being wholly new to it. This being a constant and distinguishing Difference between what is, and what is not in the Memory, or in the Mind; That what is not in the Memory, whenever it appears there, appears perfectly new, and unknown before; and what is in the Memory, or in the Mind, whenever it is suggested by the Memory, appears not to be new, but the Mind finds it in itself, and knows it was there before. By this it may be tried, whether there be any Innate *Ideas* in the Mind, before Impression from *Sensation*, or *Reflexion*. I would fain meet with the Man, who, when he came to the Use of Reason, or, at any other Time, remenibred any of them; and, to whom, after he was born, they were never new. If any one will say, there are *Ideas* in the Mind, that are not in the Memory; I desire him to explain himself, and make what he says, intelligible.

Principles not Innate, because §. 21. BESIDES what I have already said, there is another Reason why I doubt, that neither of little Use, or these, nor any other Principles, are Innate. I little Certainty. that am fully persuaded, that the infinitely wise GOD made all things in perfect Wisdom, cannot satisfy myself, why He should be supposed to print, upon the Minds of Men, some universal *Principles*, whereof those, *that* are pretended Innate, and concern *Speculation*, are of no great Use; and those, *that* concern *Practice*, not Self-evident; and neither of them distinguishable from some other Truths, not allowed to be Innate. For, to what Purpose should Characters be graven on the Mind, by the Finger of God, which are not clearer there, than those which are afterwards introduced, or cannot be distinguished from them? If any one thinks there are such Innate *Ideas* and Propositions, which, by their Clearnes and Usefulnes, are distinguishable from all that is adventitious in the Mind, and acquired, it will not be a hard matter for him to tell us, which they are; and then every one will be a fit Judge, whether they be so or no; since, if there be such Innate

Innate *Ideas* and Impressions, plainly different from all other Perceptions and Knowledge, every one will find it true in itself. Of the Evidence of these supposed Innate Maxims, I have spoken already; of their Usefulness, I shall have occasion to speak more hereafter.

§. 22. To conclude: Some *Ideas* forwardly offer themselves to all Mens Understandings; some Sort of Truths result from any *Ideas*, as soon as the Mind puts them into Propositions; other Truths require a Train of *Ideas* placed in Order, a due comparing of them, and Deductions made with Attention, before they can be discovered and assented to. Some of the first Sort, because of their general and easy Reception, have been mistaken for Innate; but the Truth is, *Ideas* and Notions are no more born with us, than Arts and Sciences, tho' some of them, indeed, offer themselves to our Faculties more readily than others, and therefore are more generally received; tho' that too be according as the Organs of our Bodies, and Powers of our Minds, happen to be employed: *God having fitted Men with Faculties, and Means, to discover, receive, and retain Truths, according as they are employed.* The great Difference, that is to be found in the Notions of Mankind, is from the different Use they put their Faculties to; whilst some (and those the most) taking things upon trust, misemploy their Power of Assent, by lazily enslaving their Minds to the Dictates and Dominion of others, in Doctrines, which it is their Duty carefully to examine; and not, blindly, with an implicit Faith, to swallow. Others, employing their Thoughts only about some few Things, grow acquainted sufficiently with them, attain great Degrees of Knowledge in them, and are ignorant of all other, having never let their Thoughts loose, in the Search of other Enquiries. Thus; that the three Angles of a Triangle are equal to two right ones, is a Truth, as certain as any thing can be; and, I think, more evident than many of those Propositions that go for Principles; and, yet, there are Millions, however expert in other Things, who know not this at all, because they never set their Thoughts on work about such Angles: And he, that certainly

*Difference of
Mens Discove-
ries depends up-
on the different
Application of
their Faculties.*

certainly knows this Proposition, may, yet, be utterly ignorant of the Truth of other Propositions, in Mathematics itself, which are as clear and evident as this; because, in his Search of those Mathematical Truths, he stopped his Thoughts short, and went not so far. The same may happen concerning the Notions we have of the Being of a Deity: For, tho' there be no Truth, which a Man may more evidently make out to himself, than the Existence of a God; yet he that shall content himself with Things, as he finds them in this World, as they minister to his Pleasures and Passions, and not make enquiry a little farther, into their Causes, Ends, and admirable Contrivances, and pursue the Thoughts thereof, with Diligence and Attention, may live long without any Notion of such a Being. And, if any Person hath, by Talk, put such a Notion into his Head, he may, perhaps, believe it; but, if he hath never *examined* it, his Knowledge of it will be no perfecter than his, who having been told, that the three Angles of a Triangle are equal to two right ones, takes it upon Trust, without examining the Demonstration, and may yield his Assent, as a probable Opinion, but hath no Knowledge of the Truth of it; which, yet, his Faculties, if carefully employed, were able to make clear and evident to him. But this only by the bye, to shew how much our *Knowledge depends upon the right Use of these Powers, Nature hath bestowed upon us*, and how little upon such Innate Principles, as are in vain supposed to be in all Mankind for their Direction; which all Men could not but know, if they were there, or else they would be there to no Purpose: And which, since all Men do not know, nor can distinguish from other adventitious Truths, we may well conclude there are no such.

Men must think, and know for themselves. §. 23. WHAT Censure, doubting thus of Innate Principles, may deserve from Men, who will be apt to call it pulling up the old Foundations of Knowledge and Certainty, I cannot tell; I persuade myself, at least, that the Way I have pursued, being conformable to Truth, lays those Foundations surer. This, I am certain, I have not made it my Business either to quit, or follow, any Authority in the ensuing Discourse: Truth has been my only Aim, and, wherever that

that has appeared to lead, my Thoughts have impartially followed; without minding whether the Footsteps of any other lay that way, or no. Not that I want a due Respect to other Mens Opinions; but, after all, the greatest Reverence is due to Truth: And, I hope it will not be thought Arrogance to say, That, perhaps, we should make greater Progress in the Discovery of rational and contemplative Knowledge, if we sought it in the Fountain, *in the Consideration of Things themselves*, and made Use rather of our own Thoughts, than other Mens, to find it: For, I think, we may as rationally hope to see with other Mens Eyes, as to know by other Mens Understandings. So much as we ourselves consider, and comprehend, of Truth and Reason, so much we possess of real and true Knowledge. The floating of other Mens Opinions in our Brains, makes us not one jot the more knowing, tho' they happen to be true. What in them was Science, is in us but Opiniatry; whilst we give up our Assent only to Reverend Names, and do not, as they did, employ our own Reason, to understand those Truths, which gave them Reputation. Aristotle was certainly a knowing Man; but no body ever thought him so, because he blindly embraced, and confidently vented the Opinions of another. And if the taking up of another's Principles, without examining them, made not him a Philosopher; I suppose it will hardly make any body else so. In the Sciences, every one has so much as he really knows, and comprehends: What he believes only, and takes upon trust, are but Shreads; which, however, will, in the whole Piece, make no considerable Addition to his Stock, who gathers them. Such borrowed Wealth, like Fairy-Money, tho' it were Gold in the Hand, from which he received it, will be but Leaves and Dust when it comes to use.

§. 24. WHEN Men have found some general Propositions, that could not be doubted of, as soon as understood, it was, I know, *a short and easy Way to conclude them Innate*. This being once received, it eased the Lazy from the Pains of Search, and, stopt the Enquiry of the Doubtful, concerning all that was once stiled Innate. And it was of no small Advantage to those, who affected to be Masters and Teachers, to make this the Principle of *Principles*, That Principles

Principles must not be questioned ; for, having once established this Tenet, That there are Innate Principles, it put their Followers upon a Necessity of receiving some Doctrines as such ; which was to take them off from the Use of their own Reason and Judgment, and put them on believing, and taking them upon trust, without farther Examination : In which Posture of blind Credulity, they might be more easily governed by, and made useful to, some sort of Men, who had the Skill and Office to principle and guide them. Nor is it a small Power it gives one Man over another, to have the Authority to be the Dictator of Principles, and Teacher of unquestionable Truths, and to make a Man swallow that for an Innate Principle, which may serve to his Purpose, who teacheth them ; whereas, had they examined the Ways, whereby Men came to the Knowledge of many universal *Truths*, they would have found them to result, in the Minds of Men, from the Being of Things themselves, when duly considered ; and that they were discovered by the Application of those Faculties, that were fitted by Nature to receive and judge of them, when duly employ'd about them.

§. 25. To shew how the Understanding proceeds herein, is the Design of the following Discourse; which I shall proceed to, when I have first premised, that hitherto, to clear my Way to those Foundations, which, I conceive, are the only true ones, whereon to establish those Notions we can have, of our own Knowledge, it hath been necessary for me to give an Account of the Reasons I had to doubt of Innate Principles. And since the Arguments, which are against them, do, some of them, rise from common, received Opinions, I have been forced to take several Things for granted, which is hardly avoidable to any one, whose Task it is to shew the Falshood, or Improbability, of any Tenet : It happening, in controversial Discourses, as it does in the assaulting of Towns, where, if the Ground be but firm, whereon the Batteries are erected, there is no farther Enquiry, of whom it is borrowed, nor whom it belongs to, so it affords but a fit Rise for the present Purpose. But, in the future Part of this Discourse, designing to raise an Edifice uniform, and consistent with itself, as far

as my own Experience and Observation will assist me, I hope to erect it on such a Basis, that I shall not need to shore it up with Props and Buttresses, leaning on borrowed, or begg'd Foundations; or, at least, if mine prove a Castle in the Air, I will endeavour it shall be all of a Piece, and hang together. Wherein I warn the Reader, not to expect undeniable, cogent Demonstrations, unless I may be allowed the Privilege, not seldom assumed by others, to take my Principles for granted ; and then, I doubt not, but I can demonstrate too. All that I shall say, for the Principles I proceed on, is, that I can only *appeal* to Mens own unprejudiced *Experience* and *Observation*, whether they be true, or no; and this is enough for a Man, who professes no more, than to lay down candidly and freely his own Conjectures, concerning a Subject lying somewhat in the dark, without any other Design, than an unbias'd Enquiry after Truth.

B O O K II.

C H A P. I.

Of Ideas in general, and their Original.

§. I. **E**VERY Man being conscious to himself that he thinks, and that which his Mind is apply'd about, whilst thinking, being the *Ideas* that are there, 'tis past doubt, that Men have in their Minds several *Ideas*, such as are those expressed by the Words, *Whiteness*, *Hardness*, *Sweetness*, *Thinking*, *Motion*, *Man*, *Elephant*, *Army*, *Drunkenness*, and others. It is, in the first place, then to be enquired, How he comes by them? I know it is a received Doctrine, That Men have native *Ideas*, and original Characters, stamped upon their Minds, in their very first Being. This Opinion I have, at large, examined already; and, I suppose, what I have said, in the foregoing Book, will

Idea is the Object of Thinking.

will be much more easily admitted, when I have shewn, whence the Understanding may get all the *Ideas* it has, and by what Ways and Degrees they come into the Mind; for which I shall appeal to every one's own Observation and Experience.

All Ideas come from Sensation or Reflexion. §. 2. LET us then suppose the Mind to be, as we say, white Paper, void of all Characters, without any *Ideas*; How comes it to be furnished? Whence comes it by that vast Store,

which the busy and boundless Fancy of Man has painted on it, with an almost endless Variety? Whence has it all the Materials of Reason and Knowledge? To this, I answer, in a word, from *Experience*; in That all our Knowledge is founded, and from That it ultimately derives itself. Our Observation employed, either about *external, sensible Objects, or about the internal Operations of our Minds, perceived, and reflected on, by ourselves, is that which supplies our Understandings with all the Materials of Thinking.* These Two are the Fountains of Knowledge, from whence all the *Ideas* we have, or can naturally have, do spring.

The Objects of Sensation, one Source of Ideas. §. 3. First, OUR SENSES, conversant about particular sensible Objects, do convey into the Mind several distinct *Perceptions* of Things, according to those various Ways, wherein those Objects do affect them: And thus we come by those *Ideas* we have,

of *Yellow, White, Heat, Cold, Soft, Hard, Bitter, Sweet*, and all those, which we call sensible Qualities; which, when I say the Senses convey into the Mind, I mean, they, from external Objects, convey into the Mind what produces there those *Perceptions*. This great Source of most of the *Ideas* we have, depending wholly upon our Senses, and derived by them to the Understanding, I call **SENSATION**.

The Operations of our Minds the other Source of them. §. 4. Secondly, THE other Fountain, from which Experience furnisheth the Understanding with *Ideas*, is the *Perception of the Operations of our own Minds* within us, as it is employ'd about the *Ideas* it has got; which Operations, when the Soul comes to reflect on, and consider, do furnish the Understanding with another Set of *Ideas*, which could not be had from

things

things without; and such are *Perception, Thinking, Doubting, Believing, Reasoning, Knowing, Willing*, and all the different Actions of our own Minds; which we being conscious of, and observing in ourselves, do, from these, receive into our Understandings as distinct *Ideas*, as we do from Bodies affecting our Senses. This Source of *Ideas* every Man has wholly in himself; and tho' it be not Sense, as having nothing to do with external Objects, yet it is very like it, and might properly enough be called Internal Sense. But, as I call the other, *Sensation*, so I call this, *REFLEXION*; the *Ideas* it affords being such only as the Mind gets, by reflecting on its own Operations, within itself. By *REFLEXION* then, in the following Part of this Discourse, I would be understood to mean, that Notice which the Mind takes of its own Operations, and the Manner of them; by reason whereof there come to be *Ideas* of these Operations in the Understanding. These two, I say, *viz.* external, material Things, as the Objects of *SENSATION*; and the Operations of our own Minds within, as the Objects of *REFLEXION*; are, to me, the only Originals, from whence all our *Ideas* take their Beginning. The Term, *OPERATIONS*, here, I use in a large Sense, as comprehending not barely the Actions of the Mind, about its *Ideas*, but some sort of Passions, arising sometimes from them; such as is the Satisfaction, or Uneasiness, arising from any Thought.

§. 5. THE Understanding seems to me not to have the least Glimmering of any *Ideas*, which it doth not receive from one of these two. *External Objects furnish the Mind with the Ideas of sensible Qualities*, which are all those different Perceptions they produce in us: And the Mind furnishes the Understanding with Ideas of its own Operations.

THESE, when we have taken a full Survey of them, and their several Modes, Combinations, and Relations, we shall find to contain all our whole Stock of *Ideas*; and that we have nothing in our Minds, which did not come in, one of these two Ways. Let any one examine his own Thoughts, and thoroughly search into his Understanding; and then let him tell me, Whether all the original *Ideas* he has there, are any other than of the Objects of his *Senses*, or of the Operations of his Mind, considered as

*All our Ideas
are of the one
or the other of
these.*

Objects of his *Reflexion*? And how great a Mass of Knowledge soever he imagines to be lodged there, he will, upon taking a strict View, see that he has *not any Idea in his Mind, but what one of these two have imprinted*; tho', perhaps, with infinite Variety, compounded and enlarged by the Understanding; as we shall see hereafter.

Observable in Children.

§. 6. HE, that attentively considers the State of a *Child*, at his first coming into the World, will have little reason to think him stored with Plenty of *Ideas*, that are to be the Matter of his future Knowledge: 'Tis by degrees he comes to be furnished with them. And, tho' the *Ideas* of obvious and familiar Qualities imprint themselves, before the Memory begins to keep a Register of Time and Order; yet, it is often so late, before some unusual Qualities come in the way, that there are few Men, that cannot recollect the Beginning of their Acquaintance with them: And, if it were worth while, no doubt, a Child might be so ordered, as to have but a very few, even of the ordinary *Ideas*, till he were grown up to a Man. But all that are born into the World, being surrounded with Bodies, that perpetually and diversly affect them; Variety of *Ideas*, whether Care be taken about it or no, are imprinted on the Minds of Children. *Light* and *Colours* are busy at hand, every where, when the Eye is but open: *Sounds*, and some *tangible Qualities*, fail not to solicit their proper Senses, and force an Entrance to the Mind; but yet, I think, it will be granted easily, That, if a Child were kept in a Place, where he never saw any other but Black and White, till he were a Man, he would have no more *Ideas* of Scarlet or Green, than he, that from his Childhood never tasted an Oyster, or a Pine-Apple, has of those particular Relishes.

Men are differently furnished with these, according to the different Objects they converse with.

§. 7. MEN then come to be furnished with fewer or more simple *Ideas*, from without, according as the *Objects* they converse with, afford greater or less Variety; and from the Operations of their Minds within, according as they more or less reflect on them. For tho' he, that contemplates the Operations of his Mind, cannot but have plain and clear *Ideas* of them; yet, unless he turn his

his Thoughts that way, and considers them *attentively*, he will no more have clear and distinct *Ideas* of all the *Operations of his Mind*, and all that may be observed therein, than he will have all the particular *Ideas* of any Landscape, or of the Parts and Motions of a Clock, who will not turn his Eyes to it, and with Attention heed all the Parts of it. The Picture, or Clock, may be so placed, that they may come in his way every Day; but yet he will have but a confused *Idea* of all the Parts, they are made up of, till he *applies himself with Attention*, to consider them each in particular.

§. 8. AND hence we see the Reason, why it is pretty late, before most Children get *Ideas* of the Operations of their own Minds; and some have not any very clear, or perfect *Ideas* of the greatest Part of them, all their Lives: Because, tho' they pass there continually, yet, like floating Visions, they make not deep Impressions enough, to leave in the Mind, clear, distinct, lasting *Ideas*, till the Understanding turns inward upon itself, *reflects* on its own *Operations*, and makes them the Object of its own Contemplation. Children, when they come first into it, are surrounded with a world of new Things, which, by a constant Solicitation of their Senses, draw the Mind constantly to them, forward to take notice of new, and apt to be delighted with the Variety of changing Objects. Thus, the first Years are usually employ'd and diverted in looking abroad. Mens Busines in them is to acquaint themselves with what is to be found without; and so, growing up in a constant Attention to outward Sensations, seldom make any considerable Reflexion on what passes within them, till they come to be of riper Years; and some scarce ever at all.

§. 9. To ask *at what Time a Man has first any Ideas*, is to ask when he begins to perceive; having *Ideas*, and Perception, being the same Thing. I know it is an Opinion, That the Soul always thinks, and that it has the actual Perception of *Ideas* in itself, constantly, as long as it exists; and that actual Thinking is as inseparable from the Soul, as actual Extension is from the Body: Which, if true, to enquire after the Beginning of a Man's *Ideas*,

*Ideas of Reflexion later,
because they
need Attention.*

*The Soul begins
to have Ideas,
when it begins
to perceive.*

is the same as to enquire after the Beginning of his Soul. For, by this Account, Soul, and its *Ideas*, as Body, and its Extension, will begin to exist, both at the same Time.

*The Soul thinks
not always; for
this wants
Proofs.*

§. 10. BUT whether the Soul be supposed to exist antecedent to, or coeval with, or some time after, the first Rudiments or Organization, or the Beginnings of Life in the Body; I leave to be disputed by those, who have better thought

of that Matter. I confess myself to have one of those dull Souls, that doth not perceive itself always to contemplate *Ideas*; nor can conceive it any more necessary for the *Soul always to think*, than for the Body always to move. The Perception of *Ideas* being (as I conceive) to the Soul, what Motion is to the Body; not its Essence, but one of its Operations. And therefore, tho' Thinking be supposed ever so much the proper Action of the Soul, yet it is not necessary to suppose that it should be always thinking, always in Action: That, perhaps, is the Privilege of the infinite Author, and Preserver of Things, *who never flumbers, nor sleeps*; but is not competent to any finite Being, at least not to the Soul of Man. We know certainly, by Experience, that we sometimes think, and thence draw this infallible Consequence, That there is something in us, that has a Power to think: But whether that Substance perpetually thinks, or no, we can be no farther assured, than Experience informs us. For to say, That actual Thinking is essential to the Soul, and inseparable from it, is to beg what is in question, and not to prove it by Reason; which is necessary to be done, if it be not a self-evident Proposition. But whether this, *That the Soul always thinks*, be a self-evident Proposition, that every Body assents to, at first hearing, I appeal to Mankind. It is doubted, whether I thought all last Night, or no; the Question being about a Matter of Fact, it is begging it, to bring, as a Proof for it, an Hypothesis, which is the very Thing in dispute; by which way one may prove any thing: And it is but supposing that all Watches, whilst the Balance beats, think; and it is sufficiently proved, and past doubt, that my Watch thought all last Night. But he, that would not deceive himself, ought to build his Hypothesis

pothesis on Matter of Fact, and make it out by sensible Experience, and not presume on Matter of Fact, because of his Hypothesis ; that is, because he supposes it to be so : Which way of proving amounts to this, that I must necessarily think all last Night, because another supposes I always think, tho' I myself cannot perceive that I always do so.

BUT Men, in love with their Opinions, may not only suppose what is in question, but alledge wrong Matter of Fact. How else could any one make it an *Inference* of mine, that *a Thing is not, because we are not sensible of it in our Sleep?* I do not say, there is no Soul in a Man, because he is not sensible of it in his Sleep : But I do say, he cannot think at any Time, waking or sleeping, without being sensible of it. Our being sensible of it, is not necessary to any thing, but to our Thoughts ; and to them it is, and to them it will always be necessary, till we can think, without being conscious of it.

§. II. I GRANT that the Soul, in a waking *It is not always* Man, is never without Thought, because it is *conscious of it.* the Condition of being awake : But whether Sleeping, without Dreaming, be not an Affection of the whole Man, Mind, as well as Body, may be worth a waking Man's Consideration ; it being hard to conceive, that any thing should think, and not be conscious of it. If the *Soul* doth *think, in a sleeping Man,* without being conscious of it ; I ask, whether, during such Thinking, it has any Pleasure or Pain, or be capable of Happiness or Misery ? I am sure, the Man is not, no more than the Bed, or Earth he lies on. For, to be happy or miserable, without being conscious of it, seems to me utterly inconsistent, and impossible ; or if it be possible that the Soul can, whilst the Body is sleeping, have its Thinking, Enjoyments, and Concerns, its Pleasure, or Pain, apart, which the Man is not conscious of, nor partakes in ; it is certain that *Socrates* asleep, and *Socrates* awake, is not the same Person : But his Soul, when he sleeps, and *Socrates* the Man, consisting of Body and Soul, when he is waking, are two Persons ; since waking *Socrates* has no Knowledge of, or Concernment for, that Happiness, or Misery of his Soul, which it enjoys alone by itself, whilst he sleeps, without perceiving any thing of ; no more than he

he has for the Happiness or Misery of a Man in the *Indies*, whom he knows not. For, if we take wholly away all Consciousness of our Actions and Sensations, especially of Pleasure and Pain, and the Concernment that accompanies it, it will be hard to know wherein to place personal Identity.

*If a sleeping
Man thinks,
without knowing
it, the sleeping
and waking
Man are two
Persons.*

§. 12. THE Soul, during sound Sleep, thinks, say these Men. *Whilst it thinks* and perceives, it is capable certainly of those of Delight, or Trouble, as well as any other Perceptions; and *it must necessarily be conscious of its own Perceptions.* But it has all this apart; the sleeping Man, it is plain, is conscious of nothing of all this. Let us suppose then, the Soul of *Castor*, whilst he is sleeping, retired from his Body; which is no impossible Supposition for the Men I have here to do with, who so liberally allow Life, without a thinking Soul, to all other Animals: These Men cannot then judge it impossible, for a Contradiction, That the Body should live without the Soul; nor that the Soul should subsist and think, or have Perception, even Perception of Happiness or Misery, without the Body. Let us then, as I say, suppose the Soul of *Castor* separated, during his Sleep, from his Body, to think apart. Let us suppose too, that it chuses for its Scene of Thinking, the Body of another Man, v. g. *Pollux*, who is sleeping without a Soul: For if *Castor's* Soul can think, whilst *Castor* is asleep, what *Castor* is never conscious of, it is no matter what Place it chuses to think in. We have here then, the Bodies of two Men, with only one Soul between them, which we will suppose to sleep and wake by turns; and the Soul still thinking in the waking Man, whereof the sleeping Man is never conscious, has never the least Perception. I ask then, Whether *Castor* and *Pollux*, thus with only one Soul between them, which thinks and perceives in one, what the other is never conscious of, nor is concerned for, are not two as distinct Persons, as *Castor* and *Hercules*, or as *Socrates* and *Plato* were? And whether one of them might not be very happy, and the other very miserable? Just by the same Reason, they make the Soul and the Man two Persons, who make the Soul think apart, what the Man is not conscious of. For I suppose, no body will

will make Identity of Persons to consist in the Soul's being united to the very same numerical Particles of Matter; for, if that be necessary to Identity, it will be impossible, in that constant Flux, of the Particles of our Bodies, that any Man should be the same Person two Days, or two Moments, together.

§. 13. Thus, methinks, every drowsy Nod shakes their Doctrine, who teach, That the Soul is always thinking. Those at least, who do at any time *sleep without dreaming*, can never be convinced, that their Thoughts are sometimes for four Hours busy, without their knowing of it; and if they are taken in the very Act, waked in the middle of that sleeping Contemplation, can give no manner of Account of it.

*Impossible to
convince those
that sleep, with-
out dreaming,
that they think.*

§. 14. 'TWILL perhaps be said, that the *Soul thinks, even in the soundest Sleep, but the Memory retains it not.* That the Soul in a sleeping Man should be this Moment busy a thinking, and the next Moment in a waking Man, not remember, nor be able to recollect one jot of all those Thoughts, is very hard to be conceived, and would need some better Proof than bare Assertion, to make it be believed. For who can, without any more ado, but being barely told so, imagine, That the greatest Part of Men do, during all their Lives, for several Hours every Day, think of something, which, if they were asked, even in the middle of these Thoughts, they could remember nothing at all of? Most Men, I think, pass a great Part of their Sleep without dreaming. I once knew a Man that was bred a Scholar, and had no bad Memory, who told me, he had never dream'd in his Life, till he had that Fever he was then newly recovered of, which was about the five, or six and twentieth Year of his Age. I suppose, the World affords more such Instances: At least every one's Acquaintance, will furnish him with Examples enough of such, as pass most of their Nights without dreaming.

*That Men
dream, without
remembering it,
in vain urged.*

§. 15. *To think, often, and never to retain it, so much as one Moment, is a very useless sort of thinking:* And the Soul, in such a State of thinking, does very little, if at all, excell that of a

*Upon this Hypo-
thesis, the
Thoughts of a
sleeping Man*

Looking-

ought to be most rational. Looking-glass, which constantly receives Variety of Images, or *Ideas*, but retains none; they disappear and vanish, and there remain no Footsteps of them; the Looking-glass is never the better for such *Ideas*, nor the Soul for such Thoughts. Perhaps it will be said, that in a waking Man, the Materials of the Body are employ'd, and made use of, in thinking; and that the Memory of Thoughts, is retained by the Impressions that are made on the Brain, and the Traces there left, after such Thinking; but that in the *Thinking of the Soul*, which is not perceived *in a sleeping Man*, there the Soul thinks apart, and *making no use of the Organs of the Body, leaves no Impressions on it, and consequently, no Memory* of such Thoughts. Not to mention again the Absurdity of two distinct Persons, which follows from this Supposition, I answer farther, That whatever *Ideas* the Mind can receive, and contemplate, without the help of the Body, it is reasonable to conclude, it can retain, without the help of the Body too; or else the Soul, or any separate Spirit, will have but little Advantage by Thinking. If it has no Memory of its own Thoughts; if it cannot lay them up for its Use, and be able to recall them upon Occasion: If it cannot reflect upon what is past, and make use of its former Experiences, Reasonings, and Contemplations, to what Purpose does it think? They, who make the Soul a thinking Thing, at this rate, will not make it a much more noble Being, than those do, whom they condemn, for allowing it to be nothing, but the subtlest Parts of Matter. Characters drawn on Dust, that the first Breath of Wind effaces; or Impressions made on a heap of Atoms, or animal Spirits, are altogether as useful, and render the Subject as noble, as the Thoughts of a Soul, that perish in Thinking; that, once out of Sight, are gone for ever, and leave no Memory of themselves behind them. Nature never makes excellent Things for mean, or no Uses: And it is hardly to be conceived, that our infinitely wise Creator, should make so admirable a Faculty, as the Power of Thinking, that Faculty, which comes nearest the Excellency of His own incomprehensible Being, to be so idly and uselessly employ'd, at least $\frac{1}{4}$ part of its time here, as to think constantly, without remembering any of those Thoughts, without doing any

Good to itself, or others, or being any way useful to any other part of the Creation. If we will examine it, we shall not find, I suppose, the Motion of dull and senseless Matter, any where in the Universe, made so little use of, and so wholly thrown away.

§. 16.'Tis true, we have sometimes Instances of Perception, whilst we are *asleep*, and retain the Memory of those *Thoughts*: But how *extravagant* and incoherent for the most part they are; how little conformable to the Perfection and Order of a rational Being, those, who are acquainted with Dreamis, need not be told. This I would willingly be satisfied in, Whether the Soul, when it thinks thus apart, and as it were separate from the Body, acts less rationally, than when conjointly with it, or no? If its separate Thoughts be less rational, then these Men must say, That the Soul owes the Perfection of rational Thinking to the Body: If it does not, 'tis a wonder, that our Dreams should be, for the most part, so frivolous and irrational; and that the Soul should retain none of its more rational Soliloquies and Meditations.

§. 17. THOSE, who so confidently tell us, That the Soul always actually thinks, I would If I think, when know it not, no body else can know it. they would also tell us, what those *Ideas* are, that are in the Soul of a Child, before, or just at the Union with the Body, before it hath received any by *Sensation*. The *Dreams* of sleeping Men, are, as I take it, all made up of the waking Man's Ideas, tho' for the most part oddly put together. 'Tis strange, if the Soul has *Ideas* of its own, that it derived not from *Sensation* or *Reflexion*, (as it must have, if it thought, before it received any Impression from the Body) that it should never, in its private Thinking, (so private, that the Man himself perceives it not) retain any of them, the very Moment it wakes out of them, and then make the Man glad with new Discoveries. Who can find it reasonable, that the Soul should, in its Retirement, during Sleep, have so many Hours Thoughts, and yet never light on any of those *Ideas*, it borrowed not from *Sensation* or *Reflexion*; or at least preserve the Memory of none but such, which being occasioned from the Body, must needs be

On this Hypothesis, the Soul must have Ideas, not derived from Sensation or Reflexion, of which there is no Appearance.

less natural to a Spirit? 'Tis strange, the Soul should never once, in a Man's whole Life, recal over any of its pure native Thoughts, and those *Ideas* it had, before it borrowed any thing from the Body; never bring into the waking Man's view, any other *Ideas*, but what have a Tang of the Cask, and manifestly derive their Original from that Union. If it always thinks, and so had *Ideas* before it was united, or before it received any from the Body, 'tis not to be supposed, but that, during Sleep, it recollects its native *Ideas*; and, during that Retirement from communicating with the Body, whilst it thinks by itself, the *Ideas* it is busied about, should be, sometimes at least, those more natural and congenial ones, which it had in itself, underived from the Body, or its own Operations about them; which, since the waking Man never remembers, we must from this Hypothesis conclude, either that the Soul remembers something that the Man does not; or else that Memory belongs only to such *Ideas*, as are derived from the Body, or the Mind's Operations about them.

How knows any one that the Soul always thinks? For, if it be not a self-evident Proposition, it needs Proof.

§. 18. I WOULD be glad also, to learn from these Men, who so confidently pronounce, that the human Soul, or, which is all one, that a Man always thinks, how they come to know it? nay, *how they come to know that they themselves think, when they themselves do not perceive it?* This, I am afraid, is, to be sure, without Proofs; and to know, without perceiving: 'Tis, I suspect, a confused Notion, taken up to serve an Hypothesis; and none of those clear Truths, that either their own Evidence forces us to admit, or common Experience makes it Impudence to deny. For the most that can be said of it, is, That 'tis possible the Soul may always think, but not always retain it in Memory: And, I say, it is as possible, that the Soul may not always think; and much more probable, that it should sometimes not think, than that it should often think, and that a long while together, and not be conscious to itself the next Moment, that it had thought.

That a Man should be busy in thinking, and yet not re-

§. 19. To suppose the Soul to think, and the Man not to perceive it, is, as has been said, to make two Persons in one Man: And, if one considers

*tain it the next
Moment, very
improbable.*

siders well these Mens way of speaking, one should be led into a Suspicion, that they must do so. For they who tell us, that the Soul always thinks, do never, that I remember, say, That a Man always thinks. Can the Soul think, and not the Man? Or a Man think, and not be conscious of it? This, perhaps, would be suspected of Jargon, in others. If they say, the Man thinks always, but is not always conscious of it; they may as well say, his Body is extended without having Parts. For it is altogether as intelligible to say, that a Body is extended without Parts, as that any thing *thinks without being conscious of it*, or perceiving that it does so. They, who talk thus, may, with as much Reason, if it be necessary to their Hypothesis, say, That a Man is always hungry, but that he does not always feel it: Whereas, Hunger consists in that very Sensation, as Thinking consists in being conscious that one thinks. If they say, that a Man is always conscious to himself of Thinking; I ask, How they know it? Consciousness is the Perception of what passes in a Man's own Mind. Can another Man perceive that I am conscious of any thing, when I perceive it not myself? No Man's Knowledge, here, can go beyond his Experience: Wake a Man out of a sound Sleep, and ask him, What he was that Moment thinking on; if he himself be conscious of nothing he then thought on, he must be a notable Diviner of Thoughts, that can assure him that he was thinking: May he not with more Reason assure him he was not asleep? This is something beyond Philosophy; and it cannot be less than Revelation, that discovers, to another, Thoughts in my Mind, when I can find none there myself; and they must needs have a penetrating Sight, who can certainly see that I think, when I cannot perceive it myself, and when I declare that I do not; and yet can see, that Dogs, or Elephants, do not think, when they give all the Demonstration of it imaginable, except only telling us that they do so. This, some may suspect to be a Step beyond the Rosicrucians; it seeming easier to make one's self invisible to others, than to make another's Thoughts visible to me, which are not visible to himself. But, 'tis but defining the Soul to be a Substance that always thinks, and the Busines is done.

done. If such Definition be of any Authority, I know not what it can serve for, but to make many Men suspect, that they have no Souls at all, since they find a good part of their Lives pass away without Thinking. For no Definitions, that I know, no Suppositions of any Sect, are of force enough, to destroy constant Experience; and, perhaps, 'tis the Affectation of knowing beyond what we perceive, that makes so much useless Dispute and Noise in the World.

*No Ideas, but
from Sensation,
or Reflexion, e-
vident, if we ob-
serve Children.*

§. 20. I SEE no reason, therefore, to believe, that the *Soul thinks, before the Senses have furnished it with Ideas to think on*; and as those are increased and retained, so it comes, by Exercise, to improve its Faculty of Thinking, in the several Parts of it, as well as afterwards, by compounding those *Ideas*, and reflecting on its own Operations; it increases its Stock, as well as Facility, in Remembring, Imagining, Reasoning, and other Modes of Thinking.

§. 21. HE that will suffer himself to be informed by Observation and Experience, and not make his own Hypothesis the Rule of Nature, will finds few Signs of a Soul, accustomed to much Thinking, in a new-born Child, and much fewer of any Reasoning at all. And, yet, it is hard to imagine, that the rational Soul should think so much, and not reason at all. And he, that will consider, that Infants, newly come into the World, spend the greatest Part of their Time in Sleep, and are seldom awake, but when either Hunger calls for the Teat, or some Pain, (the most importunate of all Sensations) or some other violent Impression upon the Body, forces the Mind to perceive, and attend to it: He, I say, who considers this, will, perhaps, find Reason to imagine, that a *Fetus, in the Mother's Womb, differs not much from the State of a Vegetable*; but passes the greatest Part of its Time without Perception, or Thought, doing very little but sleep, in a Place where it needs not seek for Food, and is surrounded with Liquor, always equally soft, and near of the same Temper; where the Eyes have no Light, and the Ears, so shut up, are not very susceptible of Sounds; and where there is little or no Variety, or Change of Objects, to move the Senses.

§. 22. FOL.

§. 22. FOLLOW a Child from its Birth, and observe the Alterations that Time makes, and you shall find, as the Mind, by the Senses, comes more and more to be furnished with *Ideas*, it comes to be more and more awake ; thinks more, the more it has Matter to think on. After some Time, it begins to know the Objects, which, being most familiar with it, have made lasting Impressions. Thus it comes, by Degrees, to know the Persons it daily converses with, and distinguish them from Strangers; which are Instances and Effects of its coming to retain and distinguish the *Ideas* the Senses convey to it. And so we may observe, how the Mind, by *Degrees*, improves in these, and advances to the Exercise of those other Faculties of *Enlarging*, *Compounding*, and *Abstracting* its *Ideas*, and of reasoning about them, and reflecting upon all these ; of which I shall have Occasion to speak more hereafter..

§. 23. If it shall be demanded then, *When a Man begins to have any Ideas*; I think the true Answer is, When he first has any *Sensation*. For since there appear not to be any *Ideas* in the Mind, before the Senses have conveyed any in, I conceive, that *Ideas* in the Understanding are coeval with *Sensation*; which is such an Impression, or Motion, made in soine Part of the Body, as produces some Perception in the Understanding. 'Tis about these Impressions, made on our Senses by outward Objects, that the Mind seems first to employ itself in such Operations as we call *Perception*, *Remembering*, *Consideration*, *Reasoning*, &c.

§. 24. In time the Mind comes to reflect on its own *Operations*, about the *Ideas* got by *Sensation*, and thereby stores itself with a new Set of *Ideas*, which I call *Ideas of Reflexion*. These are the *Impressions* that are made on our *Senses*, by outward Objects, that are extrinsical to the Mind ; and its own *Operations*, proceeding from Powers intrinsical and proper to itself, which, when reflected on by itself, become also Objects of its Contemplation, are, as I have said, *The Original of all Knowledge*. Thus the first Capacity of human Intellect, is, that the Mind is fitted to receive the Impressions made on it ; either through the *Senses*, by outward Objects;

*The Original
of all our
Knowledge.*

Objects ; or by its own Operations, when it reflects on them. This is the first Step a Man makes towards the Discovery of any Thing; and the Ground-work, whereon to build all those Notions, which ever he shall have naturally in this World. All those sublime Thoughts, which tower above the Clouds, and reach as high as Heaven itself, take their Rise and Footing here: In all that great Extent, wherein the Mind wanders, in those remote Speculations, it may seem to be elevated with, it stirs not one jot beyond those Ideas, which Sense, or Reflexion, have offered for its Contemplation.

*In the Reception
of Simple Ideas,
the Understanding is
for the most Part
passive.*

§. 25. In this Part, the Understanding is merely passive; and whether or no it will have these Beginnings, and, as it were, Materials of Knowledge, is not in its own Power. For the Objects of our Senses do, many of them, obtrude their particular Ideas upon our Minds, whether we will nor no: And the Operations of our Minds will not let us be without, at least, some obscure Notions of them. No Man can be wholly ignorant of what he does, when he thinks. These Simple Ideas, when offered to the Mind, the Understanding can no more refuse to have, nor alter, when they are imprinted, nor blot them out, and make new ones itself, than a Mirror can refuse, alter, or obliterate the Images, or Ideas, which the Objects set before it do therein produce. As the Bodies, that surround us, do diversly affect our Organs, the Mind is forced to receive the Impressions, and cannot avoid the Perception of those Ideas that are annexed to them.

C H A P. II.

Of Simple IDEAS.

*Uncompounded
Appearances.*

§. I. **T**H E better to understand the Nature, Manner, and Extent of our Knowledge, one Thing is carefully to be observed, concerning the Ideas we have ; and that is, that some of them are Simple, and some Complex.

THO'

THO' the Qualities, that affect our Senses, are, in the Things themselves, so united and blended, that there is no Separation, no Distance between them; yet 'tis plain, the Ideas, they produce in the Mind, enter by the Senses, Simple and Unmixed. For, tho' the Sight and Touch often take in, from the same Object, at the same time, different Ideas; as a Man sees at once Motion and Colour; the Hand feels Softness and Warmth in the same Piece of Wax: Yet the Simple Ideas, thus united in the same Subject, are as perfectly distinct, as those that come in by different Senses: The Coldness and Hardness, which a Man feels in a Piece of Ice, being as distinct Ideas in the Mind, as the Smell and Whiteness of a Lilly; or as the Taste of Sugar, and Smell of a Rose. And there is nothing can be plainer to a Man, than the clear and distinct Perceptions he has of those Simple Ideas; which, being each in itself uncompounded, contains in it nothing *but one uniform Appearance, or Conception in the Mind, and is not distinguishable into different Ideas.*

§. 2. THESE Simple Ideas, the Materials of all our Knowledge, are suggested and furnished to the Mind, only by these two Ways above-mentioned, *viz. Sensation and Reflexion.* (1) *The Mind can neither make, nor destroy them.*

When the Understanding is once stored with these Simple Ideas, it has the Power to repeat, compare, and unite them, even to an

(1) AGAINST this, that the Materials of all our Knowledge are suggested and furnished to the Mind only by Sensation and Reflexion, the Bishop of Worcester makes use of the Idea of Substance, in these Words: *If the Idea of Substance be grounded upon plain and evident Reason, then we must allow an Idea of Substance, which comes not in by Sensation, or Reflexion; and so we may be certain of something, which we have not, by those Ideas.*

To which our Author (*) answers: These Words of your Lordship's contain nothing, that I see in them, against me: For I never said, that the general Idea of Substance comes in by Sensation and Reflexion; or that it is a Simple Idea of Sensation, or Reflexion, tho' it be ultimately founded in them; for it is a Complex Idea, made up of the general Idea of Something, or Being, with the Relation of a Support to Accidents. For general Ideas come not into the Mind by Sensation, or Reflexion, but

(*) In his first Letter to the Bishop of Worcester, P. 35, &c.

an almost infinite Variety; and so can make at Pleasure new Complex Ideas. But it is not in the Power of the most exalted Wit, or enlarged Understanding, by any Quickness, or Variety of Thoughts, to *invent, or frame, one new Simple Idea* in the Mind, not taken in by the Ways before mentioned: Nor can any Force of the Understanding *destroy* those that are there. The Dominion of Man, in this little World of his own Understanding, being much what the same, as it is in the great World of visible Things; wherein his Power, however managed by Art and Skill, reaches

B. III. C. 3. B. but are the Creatures, or Inventions, of the Understanding, as, I think, I have shewn; and also, how *II. C. 25, &c.* the Mind makes them from *Ideas*, which it has got *C. 28. §. 18.* by Sensation and Reflexion; and as to the *Ideas* of Relation, how the Mind forms them, and how they are derived from, and ultimately terminate in *Ideas* of Sensation and Reflexion, I have likewise shewn.

BUT that I may not be mistaken what I mean, when I speak of *Ideas* of Sensation and Reflexion, as the Materials of all our Knowledge; give me leave, my Lord, to set down here *B. II. C. 1. §. 5.* a Place or two, out of my Book, to explain myself; as I thus speak of *Ideas* of Sensation and Reflexion.

THAT these, when we have taken a full Survey of them, and their several Modes, and the Compositions made out of them, we shall find ‘to contain all our whole Stock of *Ideas*; and we have nothing in *B. II. C. 7. §. 10.* ‘our Minds, which did not come in one of these two Ways.’ This Thought, in another Place, I express thus:

B. II. C. 21. ‘THESE are the most considerable of those two *§. 73.* ‘*Ideas*, which the Mind has, and out of which is made all its other Knowledge; all which it receives by the two forementioned Ways of Sensation and Reflexion.’ And, ‘Thus I have, in a short Draught, given a View of our original *Ideas*, from whence all the rest are derived, and of which they are made up.

THIS, and the like said in other Places, is what I have thought concerning *Ideas* of Sensation and Reflexion, as the Foundation and Materials of all our *Ideas*, and consequently of all our Knowledge. I have set down these Particulars out of my Book, that the Reader having a full View of my Opinion herein, may the better see what in it is liable to your Lordship’s Reprehension. For that your Lordship is not very well satisfied with it, appears not only by the Words under Consideration, but by these also: *But we are still told, that*

reaches no farther than to compound and divide the Materials that are made to his hand; but can do nothing towards the making the least Particle of new Matter, or destroying one Atom of what is already in Being. The same Inability will every one find in himself, who shall go about to fashion in his Understanding any Simple Idea, not received in by his Senses, from external Objects; or by Reflexion, from the Operations of his own Mind about them. I would have any one try to fancy any Taste, which had never affected his Palate; or frame the Idea of a Scent, he had never smelt; and when he can do this, I will

VOL. I.

N

also

our Understanding can have no other Ideas, but either from Sensation or Reflexion.

YOUR Lordship's Argument, in the Passage we are upon, stands thus: *If the general Idea of Substance be grounded upon plain and evident Reason, then we must allow an Idea of Substance, which comes not in by Sensation, or Reflexion.* This is a Consequence which, with Submission, I think, will not hold, because it is founded upon a Supposition which, I think, will not hold, *viz.* That Reason and Ideas are inconsistent; for if that Supposition be not true, then the general Idea of Substance may be grounded on plain and evident Reason; and yet it will not follow from thence, that it is not ultimately grounded on, and derived from, Ideas, which come in by Sensation, or Reflexion, and so cannot be said to come in by Sensation or Reflexion.

To explain myself, and clear my meaning in this Matter. All the Ideas of all the sensible Qualities of a Cherry, come into my Mind by Sensation; the Ideas of Perceiving, Thinking, Reasoning, Knowing, &c. come into my Mind by Reflexion: The Ideas of these Qualities and Actions, or Powers, are perceived by the Mind, to be by themselves inconsistent with Existence; or, as your Lordship well expresses it, *we find that we can have no true Conception of any Modes, or Accidents, but we must conceive a Substratum, or Subject, wherein they are, i. e.* That they cannot Exist, or Subsist, or themselves. Hence the Mind perceives their necessary Connexion with Inherence, or being supported; which being a relative Idea, superadded to the Red Colour in a Cherry, or to thinking in a Man, the Mind frames the correlative Idea of a Support. For I never denied, that the Mind could frame to itself Ideas of Relation, but have shewed the quite contrary in my Chapters about Relation. But because a Relation cannot be founded in nothing, or be the Relation of nothing, and the thing here related as a Supporter, or a Support, is not represented to the Mind, by any clear and distinct Idea; therefore the obscure and indistinct, vague Idea of Thing, or Something, is all

N

that

also conclude, that a blind Man hath *Ideas* of Colours, and a deaf Man true distinct Notions of Sounds.

§. 3. THIS is the Reason why, tho' we cannot believe it impossible to God to make a Creature with other Organs, and more Ways to convey into the Understanding the Notice of corporeal Things, than those five, as they are usually counted, which he has given to Man: Yet, I think, it is *not possible* for any one to *imagine* any other *Qualities* in Bodies, howsoever constituted, whereby they can be taken notice of, besides Sounds, Tastes, Smells, visible, and tangible Qualities. And had Mankind been made

that is left to be the positive *Idea*, which has the Relation of a *Support*, or *Substratum*, to Modes or Accidents; and that general, indetermined *Idea* of *Something*, is, by the Abstraction of the Mind, derived also from the Simple Ideas of Sensation and Reflexion: And thus the Mind, from the Positive, Simple Ideas got by Sensation and Reflexion, comes to the general, relative Idea of Substance; which, without these Positive, Simple Ideas, it would never have.

THIS your Lordship (without giving, by Retale, all the particular Steps of the Mind in this Busines) has well expressed in this more familiar Way. *We find, we can have no true Conception of any Modes, or Accidents, but we must conceive a Substratum, or Subject, wherein they are; since it is a Repugnancy to our Conception of Things, that Modes, or Accidents, should subsist by themselves.*

HENCE your Lordship calls it the *Rational Idea of Substance*: And says, *I grant that, by Sensation and Reflexion, we come to know the Powers and Properties of Things; but our Reason is satisfied, that there must be something beyond these, because it is impossible that they should subsist by themselves:* So that if this be that, which your Lordship means by the *Rational Idea of Substance*, I see nothing there is in it, against what I have said, that it is founded on Simple Ideas of Sensation, or Reflexion, and that it is a very obscure *Idea*.

YOUR Lordship's Conclusion, from your foregoing Words, is, *And so we may be certain of some Things, which we have not by those Ideas;* which is a Proposition, whose precise Meaning your Lordship will forgive me, if I profess, as it stands there, I do not understand. For it is uncertain to me, whether your Lordship means, we may certainly know the Existence of something, which we have not by those *Ideas*, or certainly know the distinct Properties of something, which we have not by these *Ideas*; or certainly know the Truth of some Proposition, which we have not by those *Ideas*; for to be certain of something may signify either of these: But in which soever of these it be meant, I do not see how I am concerned in it.

made with but four Senses, the Qualities then, which are the Objects of the fifth Sense, had been as far from our Notice, Imagination and Conception, as now any *belonging to a sixth, seventh, or eighth Sense*, can possibly be: Which, whether yet some other Creatures, in some other Parts of this vast and stupendous Universe, may not have, will be a great Presumption to deny. He that will not set himself proudly at the top of all Things; but will consider the Immensity of this Fabric, and the great Variety that is to be found in this little and inconsiderable Part of it, which he has to do with, may be apt to think, that, in other Mansions of it, there may be other, and different intelligent Beings, of whose Faculties he has as little Knowledge, or Apprehension, as a Worm shut up in one Drawer of a Cabinet hath of the Senses, or Understanding, of a Man; such Variety and Excellency being suitable to the Wisdom and Power of the Maker. I have here followed the common Opinion of Man's having but five Senses; tho' perhaps, there may be justly counted more; but either Supposition serves equally to my present Purpose.

C H A P. III.

Of IDEAS of one Sense.

§. I. **T**HE better to conceive the Ideas we receive from Sensation, it may not be amiss for us to consider them, in reference to the different Ways, whereby they make their Approaches to our Minds, and make themselves perceivable by us.

First, then, THERE are some, which come into our Minds by one Sense only.

Secondly, THERE are others, that convey themselves into the Mind by more Senses than one.

Thirdly, OTHERS, that are had from Reflexion only.

Fourthly,

Fourthly, THERE are some, that make themselves way, and are suggested to the Mind, by all the ways of Sensation and Reflexion.

WE shall consider them apart, under these several Heads.

Ideas of one Sense, as Contours of Seeing, Sound, of Hearing, &c.

First, THERE are some Ideas which have Admittance only thro' one Sense, which is peculiarly adapted to receive them. Thus Light and Colours, as White, Red, Yellow, Blue, with their several Degrees, or Shades, and Mixtures, as Green, Scarlet, Purple, Sea-green, and the rest; come in only by the Eyes: All kind of Noises, Sounds, and Tones, only by the Ears: The several Tastes, and Smells, by the Nose and Palate. And if these Organs, or the Nerves, which are the Conduits to convey them, from without, to their Audience in the Brain, the Mind's Presence-room (as I may so call it) are, any of them, so disordered, as not to perform their Functions, they have no Postern to be admitted by; no other Way to bring themselves into View, and be perceived by the Understanding.

THE most considerable of those belonging to the Touch, are Heat, and Cold, and Solidity; all the rest consisting almost wholly in the sensible Configuration, as Smooth and Rough; or else more, or less, firm Adhesion of the Parts; as hard and soft, tough and brittle, are obvious enough.

Few Simple Ideas have Names.

§. 2. I THINK, it will be needless to enumerate all the particular *Simple Ideas*, belonging to each Sense. Nor, indeed, is it possible, if we would; there being a great many *more* of them belonging to most of the Senses, than we have Names for. The Variety of Smells, which are as many almost, if not more, than Species of Bodies in the World, do most of them want Names. *Sweet* and *Stinking* commonly serve our turn for these *Ideas*, which, in effect, is little more than to call them pleasing, or displeasing; tho' the Smell of a Rose and Violet, both sweet, are, certainly, very distinct *Ideas*. Nor are the different Tastes, that, by our Palates, we receive *Ideas* of, much better provided with Names. *Sweet*, *Bitter*, *Sour*, *Harsh*, and *Salt*, are almost all the Epithets we have to denominate that numberless Variety of Relishes, which are

to

to be found distinct, not only in almost every sort of Creatures, but in the different Parts of the same Plant, Fruit, or Animal. The same may be said of Colours and Sounds. I shall, therefore, in the Account of Simple Ideas, I am here giving, content myself to set down only such, as are most material to our present Purpose, or are in themselves less apt to be taken notice of, tho' they are very frequently the Ingredients of our Complex Ideas; amongst which, I think, I may well account Solidity; which, therefore, I shall treat of in the next Chapter.

C H A P. IV.

Of Solidity.

We receive this Idea from our Touch; and it arises from the Resistance which we find in Body,

THE Idea of Solidity we receive by our Touch; and it arises from the Resistance which we find in Body, to the Entrance of any other Body into the Place it possesses, till it has left it. There is no Idea, which we receive more constantly from Sensation, than Solidity. Whether we move, or rest, in what Posture soever we are, we always feel something under us, that supports us, and hinders our farther sinking downwards; and the Bodies, which we daily handle, make us perceive, that whilst they remain between them, they do, by an insurmountable Force, hinder the Approach of the Parts of our Hands that press them. That, which thus hinders the Approach of two Bodies, when they are moving one towards another, I call Solidity. I will not dispute, whether this Acceptation of the Word *Solid*, be nearer to its original Signification, than that which Mathematicians use it in; it suffices, that I think the common Notion of Solidity will allow, if not justify, this Use of it; but, if any one think it better to call it *Impenetrability*, he has my Consent. Only I have thought the Term *Solidity*, the more proper to express this Idea, not only because of its vulgar Use in that Sense; but, also, because it carries something more of positive in it than *Impenetrability*, which is negative, and is, perhaps, more

more a Consequence of *Solidity*, than *Solidity* itself. This, of all other, seems the *Idea* most intimately connected with, and essential to Body; so as no where else to be found, or imagined, but only in Matter. And, tho' our Senses take no notice of it, but in Masses of Matter, of a Bulk sufficient to cause a Sensation in us; yet the Mind, having once got this *Idea*, from such grosser sensible Bodies, traces it farther; and considers it, as well as Figure, in the minutest Particle of Matter that can exist; and finds it inseparably inherent in Body, where-ever, or however modified.

Solidity fills Space. §. 2. THIS is the *Idea* belongs to Body, whereby we conceive it to fill Space. The *Idea* of

which filling of Space is, That, where we imagine any Space taken up by a solid Substance, we conceive it so to possess it, that it excludes all other solid Substances; and will for ever hinder any two other Bodies, that move towards one another in a strait Line, from coming to touch one another, unless it removes from between them, in a Line not parallel to that which they move in. This *Idea* of it, the Bodies which we ordinarily handle, sufficiently furnish us with.

Distinct from Space. §. 3. THIS Resistance, whereby it keeps other Bodies out of the Space which it possesses, is so

great, that no Force, how great soever, can surmount it. All the Bodies in the World, pressing a Drop of Water on all Sides, will never be able to overcome the Resistance which it will make, as soft as it is, to their approaching one another, till it be removed out of their way: Whereby our *Idea* of *Solidity* is distinguished both from pure Space, which is capable neither of Resistance, nor Motion; and from the ordinary *Idea* of Hardness. For a Man may conceive two Bodies at a distance, so as they may approach one another, without touching, or displacing, any solid Thing, till their Superficies come to meet: Whereby, I think, we have the clear *Idea* of Space without *Solidity*. For (not to go so far as Annihilations of any particular Body) I ask, whether a Man cannot have the *Idea* of the Motion of one single Body alone, without any other succeeding immediately into its Place? I think, 'tis evident he can: The *Idea* of Motion in one Body no more including the *Idea*

of Motion in another, than the *Idea* of a square Figure in one Body includes the *Idea* of a square Figure in another. I do not ask, whether Bodies do so exist, that the Motion of one Body cannot really be without the Motion of another. To determine this either Way, is to beg the Question for, or against, a *Vacuum*. But my Question is, whether one cannot have the *Idea* of one Body in motion, whilst others are at rest? And, I think, this no one will deny. If so, then the Place, it deserted, gives us the *Idea* of pure Space, without Solidity, whereinto another Body may enter, without either Resistance, or Protrusion, of any thing. When the Sucker in a Pump is drawn, the Space it filled in the Tube is certainly the same, whether any other Body follows the Motion of the Sucker, or no: Nor does it imply a Contradiction, that, upon the Motion of one Body, another, that is only contiguous to it, should not follow it. The Necessity of such a Motion is built only on the Supposition that the World is full, but not on the distinct *Ideas* of Space and Solidity; which are as different as Resistance, and not Resistance, Protrusion, and not Protrusion. And that Men have *Ideas* of Space, without Body, their very Disputes about a *Vacuum* plainly demonstrate; as is shewn in another Place. As,

§. 4. SOLIDITY is, hereby, also, *differenced from Hardness*, in that Solidity consists in Re-

pletion, and so an utter Exclusion of other Bodies out of the Space it possesses; but Hardness, in a firm Cohesion of the Parts of Matter, making up Masses of a sensible Bulk, so that the Whole does not easily change its Figure. And, indeed, Hard and Soft, are Names that we give to Things, only in Relation to the Constitutions of our own Bodies; that being generally called Hard by us, which will put us to Pain, sooner than change Figure, by the Pressure of any Part of our Bodies; and that, on the contrary, Soft, which changes the Situation of its Parts, upon an easy, and unpainful Touch.

BUT this Difficulty of changing the Situation of the sensible Parts amongst themselves, or of the Figure of the whole, gives no more Solidity to the hardest Body in the World, than to the softest; nor is an Adamant one jot more solid than Water. For,

tho'

tho' the two flat Sides of two Pieces of Marble will more easily approach each other, between which there is nothing but Water, or Air, than if there be a Diamond between them: Yet, it is not, that the Parts of the Diamond are more solid than those of Water, or resist more; but because the Parts of Water being more easily separable from each other, they will, by a side Motion, be more easily removed, and give way to the Approach of the two Pieces of Marble. But if they could be kept from making place, by that side Motion, they would eternally hinder the Approach of these two Pieces of Marble, as much as the Diamond; and 'twould be as impossible, by any Force, to surmount their Resistance, as to surmount the Resistance of the Parts of a Diamond. The softest Body in the World, will as invincibly resist the coming together of any two other Bodies, if it be not put out of the way, but remain between them, as the hardest that can be found, or imagin'd. He that shall fill a yielding soft Body well with Air, or Water, will quickly find its Resistance: And he that thinks that nothing but Bodies that are hard, can keep his Hands from approaching one another, may be pleased to make a Trial, with the Air inclosed in a Foot Ball. The Experiment, I have been told, was made at *Florence*, with a hollow Globe of Gold filled with Water, and exactly closed, farther shews the Solidity of so soft a Body as Water. For the Golden Globe, thus filled, being put into a Pres, which was driven by the extreme Force of Screws, the Water made itself way through the Pores of that very close Metal; and finding no room for a nearer Approach of its Particles within, got to the outside, where it rose like a Dew, and so fell in Drops, before the Sides of the Globe could be made to yield to the violent Compression of the Engine that squeezed it.

On Solidity depends Impulse, Resistance, and Protrusion. §. 5. By this Idea of Solidity, is the Extension of Body distinguished from the Extension of Space: The Extension of Body being nothing, but the Cohesion, or Continuity of solid, separable, moveable Parts; and the Extension of Space, the Continuity of unsolid, inseparable, and immovable Parts. Upon the Solidity of Body also depends their mutual Impulse, Resistance,

ance, and Protrusion. Of pure Space then, and Solidity, there are several (amongst which, I confess myself one) who persuade themselves they have clear and distinct Ideas; and that they can think on Space, without any thing in it, that resists, or is protruded by, Body. This is the Idea of pure Space, which, they think, they have as clear as any Idea they can have of the Extension of Body; the Idea of the Distance between the opposite Parts of a concave Superficies, being equally as clear without, as with the Idea of any solid Parts between; and, on the other side, they persuade themselves, that they have, distinct from that of pure Space, the Idea of something that fills Space, that can be protruded by the Impulse of other Bodies, or resist their Motion. If there be others, that have not these two Ideas distinct, but confound them, and make but one of them; I know not how Men, who have the same Idea under different Names, or different Ideas under the same Name, can, in that case, talk with one another; any more than a Man, who, not being blind, or deaf, has distinct Ideas of the Colour of Scarlet, and the Sound of a Trumpet, could discourse concerning Scarlet-Colour with the blind Man, I mention in another Place, who fancied that the Idea of Scarlet was like the Sound of a Trumpet.

§. 6. If any one asks me, *What this Solidity is, What it is.* I send him to his Senses to inform him: Let him put a Flint, or a Foot-Ball, between his Hands, and then endeavour to join them, and he will know. If he think this not a sufficient Explication of Solidity, what it is, and wherein it consists; I promise to tell him what it is, and wherein it consists; when he tells me, what Thinking is, or wherein it consists; or explains to me what Extension, or Motion, is, which, perhaps, seems much easier. The Simple Ideas we have, are such, as Experience teaches them us; but, if beyond that, we endeavour, by Words, to make them clearer in the Mind, we shall succeed no better, than if we went about to clear up the Darkness of a blind Man's Mind by talking; and to discourse into him the Ideas of Light and Colours. The Reason of this I shall shew in another Place.

C H A P. V.

Of Simple IDEAS of divers Senses.

TH E Ideas we get by more than one Sense, are of *Space*, or *Extension*, *Figure*, *Rest*, and *Motion*; for these make perceivable Impressions, both on the Eyes and Touch: And we can receive, and convey into our Minds, the Ideas of our Extension, Figure, Motion, and Rest of Bodies, both by Seeing and Feeling. But having occasion to speak more at large of these in another Place, I here only enumerate them.

C H A P. VI.

Of Simple IDEAS of Reflexion.

Simple Ideas
are the Operations of the Mind,
about its other Ideas.

§. 1. **T**HE Mind, receiving the Ideas, mentioned in the foregoing Chapters, from without, when it turns its View inward upon itself, and observes its own Actions, about those Ideas it has, takes from thence other Ideas, which are as capable to be the Objects of its Contemplation, as any of those it received from Foreign Things.

The Idea of
Perception, and
Idea of Willing,
we have from
Reflexion.

§. 2. THE two great, and principal, Actions of the Mind, which are most frequently considered, and which are so frequent, that every one that pleases may take notice of them in himself, are these two:

Perception, or *Thinking*; and
Volition, or *Willing*.

The Power of Thinking is called the *Understanding*, and the Power of Volition is called the *Will*; and these two Powers, or Abilities, in the Mind, are denominated *Faculties*. Of some of the

the Modes of these Simple Ideas of Reflexion, such as are *Remembrance*, *Discerning*, *Reasoning*, *Judging*, *Knowledge*, *Faith*, &c. I shall have occasion to speak hereafter.

C H A P. VII.

Of Simple IDEAS of both Sensation and Reflexion.

§. 1. **T**H E R E be other Simple Ideas, *Pleasure* and *Pain*, which convey themselves into the Mind; by all the Ways of Sensation and Reflexion, viz.

Pleasure, or *Delight*, and its Opposite.

Pain, or *Uneasiness*.

Power.

Existence.

Unity.

§. 2. *Delight*, or *Uneasiness*, one or other of them join themselves, to almost all our Ideas, both of Sensation and Reflexion: And there is scarce any Affection of our Senses from without, any retired Thought of our Mind within, which is not able to produce in us *Pleasure*, or *Pain*. By *Pleasure* and *Pain*, I would be understood to signify whatsoever delights, or molests us; whether it arises from the Thoughts of our Minds, or any thing operating on our Bodies. For, whether we call it Satisfaction, Delight, Pleasure, Happiness, &c. on the one side; or Uneasiness, Trouble, Pain, Torment, Anguish, Misery, &c. on the other; they are still but different Degrees of the same Thing, and belong to the Ideas of *Pleasure* and *Pain*, *Delight*, or *Uneasiness*; which are the Names I shall most commonly use for those two sorts of Ideas.

§. 3. THE infinitely wise Author of our Being, having given us the Power over several Parts of our Bodies, to move, or keep them at rest, as we think fit; and also, by the Motion of them, to move ourselves, and other contiguous Bodies, in which consists all the Actions of our Body: Having also given a Power to our

Minds,

Minds, in several Instances, to chuse, amongst its *Ideas*, which it will think on, and to pursue the Enquiry of this, or that Subject, with Consideration and Attention, to excite us to these Actions of Thinking, and Motion, that we are capable of, has been pleased to join to several Thoughts, and several Sensations, a Perception of Delight. If this were wholly separated, from all our outward Sensations, and inward Thoughts, we should have no Reason to prefer one Thought, or Action, to another; Negligence to Attention, or Motion to Rest. And so we should neither stir our Bodies, nor employ our Minds; but let our Thoughts (if I may so call it) run adrift, without any Direction, or Design; and suffer the *Ideas* of our Minds, like unregarded Shadows, to make their Appearances there, as it happen'd, without attending to them. In which State, Man, however furnished with the Faculties of Understanding, and Will, would be a very idle, unactive Creature, and pass his time only in a lazy, lethargic Dream. It has, therefore, pleased our wise Creator, to annex to several Objects, and to the *Ideas* which we receive from them, as also, to several of our Thoughts, a concomitant Pleasure, and that in several Objects, to several Degrees; that those Faculties, which He had endowed us with, might not remain wholly idle, and unemployed by us.

§. 4. PAIN has the same Efficacy and Use to set us on work, that Pleasure has, we being as ready to employ our Faculties, to avoid That, as to pursue This: Only this is worth our Consideration, that *Pain is often produced by the same Objects and Ideas, that produce Pleasure in us.* This their near Conjunction, which makes us often feel Pain in the Sensations, where we expected Pleasure, gives us new occasion, of admiring the Wisdom and Goodness of our Maker, who, designing the Preservation of our Being, has annexed Pain to the Application of many things to our Bodies, to warn us of the Harm that they will do, and as Advices to withdraw from them. But He, not designing our Preservation, barely, but the Preservation of every Part, and Organ in its Perfection, hath, in many Cases, annexed Pain to those very Ideas, which delight us. Thus Heat, that is very agreeable to us in one Degree, by a little greater Increase of it, proves no ordinary

nary Torment; and the most pleasant of all sensible Objects, Light itself, if there be too much of it, if increased beyond a due Proportion to our Eyes, causes a very painful Sensation: Which is wisely and favourably so ordered by Nature, that when any Object does, by the Vehemency of its Operation, disorder the Instruments of Sensation, whose Structures cannot but be very nice and delicate; we might, by the Pain, be warned to withdraw, before the Organ be quite put out of order, and so be unfitted for its proper Functions for the future. The Consideration of those Objects, that produce it, may well persuade us, that this is the End, or Use of Pain. For tho' great Light be insufferable to our Eyes, yet the highest Degree of Darkness does not at all disease them; because that causing no disorderly Motion in it, leaves that curious Organ unharmed, in its natural State. But yet, Excess of Cold, as well as Heat, pains us; because it is equally destructive to that Temper, which is necessary to the Preservation of Life, and the Exercise of the several Functions of the Body, and which consists in a moderate Degree of Warmth; or, if you please, a Motion of the insensible Parts of our Bodies, confin'd within certain Bounds.

§. 5. BEYOND all this, we may find another Reason, *why God hath scattered up and down, several Degrees of Pleasure and Pain, in all the Things that environ and affect us;* and blended them together, in almost all that our Thoughts and Senses have to do with; that we, finding Imperfection, Dissatisfaction, and want of complete Happiness, in all the Enjoyments, which the Creatures can afford us, might be led to seek it in the Enjoyment of Him, *with whom there is fulness of Joy, and at whose Right Hand are Pleasures for evermore.*

§. 6. THO' what I have here said, may not, *Pleasure and Pain.* perhaps, make the *Ideas of Pleasure and Pain* clearer to us, than our own Experience does, which is the only Way that we are capable of having them; yet the Consideration of the Reason, why they are annex'd to so many other Ideas, serving to give us due Sentiments, of the Wisdom and Goodness of the sovereign Disposer of all Things, may not be unsuitable

unsuitable to the main End of these Enquiries; the Knowledge and Veneration of Him, being the chief End of all our Thoughts, and the proper Business of all Understandings.

Existence and Unity. §. 7. EXISTENCE and UNITY, are two other Ideas, that are suggested to the Understanding, by every Object without, and every Idea within. When Ideas are in our Minds, we consider them as being actually there, as well as we consider Things to be actually without us; which is, that they exist, or have Existence: And whatever we can consider as one Thing, whether a real Being, or Idea, suggests to the Understanding the Idea of Unity.

Power. §. 8. POWER also, is another of those Simple

Ideas, which we receive from Sensation and Reflexion. For, observing in ourselves, that we can, at Pleasure, move several Parts of our Bodies, which were at Rest; the Effects also, that natural Bodies are able to produce in one another, occurring every Moment to our Senses, we both these Ways get the Idea of Power.

Succeſſion. §. 9. BESIDES these, there is another Idea, which, tho' suggested by our Senses, yet it is more constantly offered us, by what passes in our own Minds; and that is, the Idea of Succeſſion. For if we look immediately into ourselves, and reflect on what is observable there, we shall find our Ideas always, whilst we are awake, or have any Thought, passing in Train, one going, and another coming, without Interruption.

Simple Ideas the Materials of all our Knowledge. §. 10. THESE, if they are not all, are at least, (as I think) the most considerable of those Simple Ideas, which the Mind has, and out of which is made all its other Knowledge; all which it receives only by the two fore mentioned Ways of Sensation and Reflexion.

NOR let any one think these too narrow bounds for the capacious Mind of Man, to expatiate in, which takes its flight farther than the Stars, and cannot be confined by the Limits of the World; that extends its Thoughts often, even beyond the utmost Expansion of Matter, and makes Excursions into that incomprehensible

comprehensible *Inane*. I grant all this, but desire any one to assign any *Simple Idea*, which is not received from one of those Inlets before mentioned, or any *Complex Idea*, not made out of those *Simple ones*. Nor will it be so strange, to think these few *Simple Ideas* sufficient to employ the quickest Thought, or largest Capacities; and to furnish the Materials of all that various Knowledge, and more various Fancies and Opinions of all Mankind, if we consider how many Words may be made, out of the various Composition of twenty four Letters; or, if going one Step farther, we will but reflect on the Variety of Combinations may be made, with barely one of the above mentioned *Ideas*, viz. Number, whose Stock is inexhaustible, and truly infinite: And what a large and immense Field doth Extension alone, afford the Mathematicians?

C H A P. VIII.

Some farther Considerations concerning our Simple IDEAS.

§. 1. C ONCERNING the Simple Ideas *Positive Ideas* of Sensation, 'tis to be considered, *from privative Causes*. That whatsoever is so constituted

in Nature, as to be able, by affecting our Senses, to cause any Perception in the Mind, doth thereby produce, in the Understanding, a Simple *Idea*; which, whatever be the external Cause of it, when it comes to be taken Notice of, by our discerning Faculty, it is by the Mind looked on, and considered there, to be a real, *Positive Idea*, in the Understanding, as much as any other whatsoever; tho', perhaps, the Cause of it be but a Privation in the Subject.

§. 2. T HUS, the *Ideas* of Heat and Cold, Light and Darkness, White and Black, Motion and Rest, are equally clear, and *Positive Ideas*, in the Mind; tho', perhaps, some of the *Causes*, which produce them, are barely *Privations*, in those Subjects, from whence our Senses derive those *Ideas*. These the Understanding,

ing, in its View of them, considers all as distinct, Positive Ideas, without taking notice of the Causes that produce them; which is an Enquiry not belonging to the *Idea*, as it is in the Understanding; but to the Nature of the Things, existing without us. These are two very different things, and carefully to be distinguished; it being one Thing to perceive and know the *Idea* of White, or Black; and quite another, to examine what kind of Particles they must be, and how ranged in the Superficies, to make any Object appear white or black.

§. 3. A PAINTER, or Dyer, who never enquired into their Causes, hath the *Ideas* of White and Black, and other Colours, as clearly, perfectly, and distinctly, in his Understanding, and, perhaps, more distinctly than the Philosopher, who hath busied himself in considering their Natures, and thinks he knows how far either of them is, in its Cause, positive or privative; and the *Idea* of Black, is no less *positive* in his Mind, than that of White, *however, the Cause* of that Colour, in the external Object, *may be only a Privation*.

§. 4. If it were the Design of my present Undertaking to enquire into the natural Causes, and Manner of Perception, I should offer this as a Reason, *why a privative Cause might, in some Cases at least, produce a positive Idea, viz.* That all Sensation, being produced in us only by different Degrees, and Modes of Motion, in our animal Spirits, variously agitated by external Objects, the Abatement of any former Motion, must as necessarily produce a new Sensation, as the Variation, or Increase of it; and so introduce a new *Idea*, which depends only on a different Motion of the animal Spirits, in that Organ.

§. 5. But whether this be so, or no, I will not here determine; but appeal to every one's own Experience, whether the Shadow of a Man, tho' it consists of nothing but the Absence of Light, (and the more the Absence of Light is, the more discernible is the Shadow) does not, when a Man looks on it, cause as clear and positive an *Idea* in his Mind, as a Man himself, tho' covered over with clear Sun-shine? And the Picture of a Shadow is a positive thing. Indeed, we have *negative Names*, which stand not directly for positive *Ideas*, but for their Absence, such as *Insipid*, *Silence*,

Silence, Nihil, &c. which Words denote positive Ideas; v. g. *Taste, Sound, Being*, with a Signification of their Absence.

§. 6. AND thus one may truly be said to see Darknes. For, supposing a Hole perfectly dark, from whence no Light is reflected, 'tis certain one may see the Figure of it, or it may be painted; or whether the Ink, I write with, makes any other Idea, is a Question. The privative Causes I have here assigned, of positive Ideas, are according to the common Opinion; but, in truth, it will be hard to determine, whether there be really any Ideas from a privative Cause, till it be determined, *Whether Rest be any more a Privation than Motion.*

§. 7. To discover the Nature of our Ideas the better, and to discourse of them intelligibly, it will be convenient to distinguish them, as they are Ideas, or Perceptions, in our Minds, and, as they are Modifications of Matter in the Bodies, that cause such Perceptions in us; that so we *may not* think (as perhaps usually is done) that they are exactly the Images, and *Resemblances*, of something inherent in the Subject; most of those of Sensation being, in the Mind, no more the Likeness of something existing without us, than the Names, that stand for them, are the Likeness of our Ideas, which yet, upon Hearing, they are apt to excite in us.

§. 8. WHATSOEVER the Mind perceives in itself, or is the immediate Object of Perception, Thought, or Understanding, that I call *Idea*; and the Power to produce any *Idea* in our Mind, I call *Quality* of the Subject, wherin that Power is. Thus, a Snow-ball, having the Power to produce in us the Ideas of *White*, *Cold*, and *Round*, the Powers to produce those Ideas in us, as they are in the Snow-ball, I call Qualities; and as they are Sensations, or Perceptions, in our Understandings, I call them Ideas: Which Ideas, if I speak of sometimes, as in the Things themselves, I would be understood, to mean those Qualities in the Objects, which produce them in us.

§. 9. QUALITIES, thus considered in Bodies, are, First, such as are utterly inseparable from the Body, in what Estate soever it be; such as, in all the Altera-

Positive Ideas
from privative
Causes.

Ideas in the
Mind, Quali-
ties in Bodies.

tions and Changes it suffers, all the Force can be used upon it, it constantly keeps ; and such as Sense constantly finds, in every Particle of Matter, which has Bulk enough to be perceived, and the Mind finds inseparable from every Particle of Matter, tho' less than to make itself singly be perceived by our Senses : *v. g.* Take a Grain of Wheat, divide it into two Parts, each Part has still *Solidity, Extension, Figure, and Mobility*; divide it again, and it retains still the same Qualities ; and so divide it on, till the Parts become insensible, they must retain still, each of them, all those Qualities. For Division (which is all that a Mill, or Pestle, or any other Body, does upon another, in reducing it to insensible Parts) can never take away either Solidity, Extension, Figure, or Mobility, from any Body, but only makes two, or more, distinct, separate Masses of Matter, of that which was but one before ; all which distinct Masses, reckon'd as so many distinct Bodies, after Division, make a certain Number. These I call *Original, or Primary Qualities* of Body, which I think we may observe to produce Simple Ideas in us, *viz.* Solidity, Extension, Figure, Motion, or Rest, and Number.

Secondary Qualities. §. 10. 2dly, Such Qualities, which in truth are nothing in the Objects themselves, but Powers to produce various Sensations in us, by their *Primary Qualities*, *i. e.* by the Bulk, Figure, Texture and Motion, of their insensible Parts, as Colours, Sounds, Tastes, &c. These I call *Secondary Qualities*. To these might be added a third Sort, which are allowed to be barely Powers, tho' they are as much real Qualities in the Subject, as those which I, to comply with the common Way of Speaking, call *Qualities*, but, for Distinction, *Secondary Qualities*. For the Power in Fire to produce a new Colour, or Consistency in Wax, or Clay, by its Primary Qualities, is as much a Quality in Fire, as the Power it has to produce in me a new Idea, or Sensation of Warmth, or Burning, which I felt not before, by the same Primary Qualities, *viz.* the Bulk, Texture, and Motion of its insensible Parts.

How Primary Qualities produce their Ideas.

§. 11. THE next Thing to be consider'd, is, how Bodies produce Ideas in us ; and that is manifestly by *Impulse*, the only Way which we can conceive Bodies operate in.

§. 12. If

§. 12. If then external Objects be not united to our Minds, when they produce *Ideas* in it, and yet we perceive *these original Qualities*, in such of them as singly fall under our Senses; 'tis evident, that some Motion must be thence continued, by our Nerves, or animal Spirits, by some Parts of our Bodies, to the Brain, or the Seat of Sensation, there to produce *in our Minds the particular Ideas we have of them*. And since the Extension, Figure, Number, and Motion of Bodies of an observable Bigness, may be perceived at a Distance by the Sight; 'tis evident, some singly imperceptible Bodies must come from them to the Eyes, and thereby convey to the Brain some *Motion*, which produces these *Ideas*, which we have of them in us.

§. 13. AFTER the same manner, that the *Ideas How Secondary of these original Qualities are produced in us, i.y.*

we may conceive, that the *Ideas of Secondary Qualities* are also produced, viz. by the Operation of insensible Particles on our Senses. For it being manifest, that there are Bodies, and good store of Bodies, each whereof are so small, that we cannot, by any of our Senses, discover either their Bulk, Figure, or Motion; as is evident in the Particles of the Air, and Water, and other extremely smaller than those, perhaps, as much Smaller than the Particles of Air, or Water, as the Particles of Air, or Water, are smaller than Pease, or Hail-stones: Let us suppose, at present, that the different Motions and Figures, Bulk and Number of such Particles, affecting the several Organs of our Senses, produce in us those different Sensations, which we have from the Colours, and Smells of Bodies; v.g. that a Violet, by the Impulse of such insensible Particles of Matter, of peculiar Figures, and Bulks, and in different Degrees, and Modifications, of their Motions, causes the *Ideas* of the Blue Colour, and sweet Scent of that Flower, to be produced in our Minds; it being no more impossible to conceive, that God should annex such *Ideas* to such Motions, with which they have no Similitude, than that he should annex the *Idea* of Pain, to the Motion of a Picce of Steel, dividing our Flesh, with which that *Idea* hath no Resemblance.

§. 14. WHAT I have said, concerning *Colours* and *Smells*, may be understood also of *Tastes* and *Sounds*, and other the like insensible Qualities;

Qualities; which, whatever Reality we, by Mistake, attribute to them, are in truth nothing in the Objects themselves, but Powers to produce various Sensations in us, and depend on those Primary Qualities, viz. Bulk, Figure, Texture, and Motion of Parts; as I have said.

Ideas of Primary Qualities, are Resemblances; of Secondary, not.

§. 15. FROM whence I think it as easy to draw this Observation, that the Ideas of Primary Qualities of Bodies, are Resemblances of them, and their Patterns do really exist in the Bodies themselves; but the Ideas, produced in us by these Secondary Qualities, have no Resemblance of them at all. There is nothing like our Ideas existing in the Bodies themselves. They are in the Bodies, we denominate from them, only a Power to produce those Sensations in us: And what is Sweet, Blue, or Warm, in Idea, is but the certain Bulk, Figure, and Motion of the insensible Parts in the Bodies themselves, which we call so.

§. 16. Flame is denominated Hot and Light; Snow, White and Cold; and Manna, White and Sweet; from the Ideas they produce in us: Which Qualities are commonly thought to be the same in those Bodies, that those Ideas are in us, the one the perfect Resemblance of the other, as they are in a Mirrour; and it would, by most Men, be judged very extravagant, if one should say otherwise. And yet, he that will consider that the same Fire, that at one Distance produces in us the Sensation of Warmth, does at a nearer Approach, produce in us the far different Sensation of Pain, ought to bethink himself, what Reason he has to say, That his Idea of Warmth, which was produced in him by the Fire, is actually in the Fire; and his Idea of Pain, which the same Fire produced in him, the same Way, is not in the Fire. Why is Whiteness and Coldness in Snow, and Pain not, when it produces the one and the other Idea in us; and can do neither, but by the Bulk, Figure, Number, and Motion of its solid Parts?

§. 17. THE particular Bulk, Number, Figure, and Motion of the Parts of Fire, or Snow, are really in them, whether any one's Senses perceive them, or no; and, therefore, they may be called real Qualities; because they really exist in those Bodies: But Light, Heat, Whiteness, or Coldness, are not more really in them, than Sickness

ness, or Pain, is in Manna. Take away the Sensation of them; let not the Eyes see Light, or Colours, nor the Ears hear Sounds; let the Palate not Taste, nor the Nose Smell; and all Colours, Tastes, Odours, and Sounds, as they are such particular Ideas, vanish and cease, and are reduced to their Causes, i e. Bulk, Figure, and Motion of Parts.

§. 18. A PIECE of Manna, of a sensible Bulk, is able to produce in us the Idea of a round, or square Figure, and, by being removed from one Place to another, the Idea of Motion. This Idea of Motion represents it, as it really is in the Manna moving: A Circle, or Square, are the same time, whether in Idea, or Existence; in the Mind, or in the Manna: And this, both Motion and Figure are really in the Manna, whether we take notice of them, or no: This every body is ready to agree to. Besides, Manna, by the Bulk, Figure, Texture, and Motion of its Parts, has a Power to produce the Sensations of Sicknes, and sometimes of acute Pains, or Gripings, in us. That these Ideas of Sicknes and Pain are not in the Manna, but Effects of its Operations on us, and are no where, when we feel them not: This also every one readily agrees to. And yet Men are hardly to be brought to think, that Sweetnes and Whiteness are not really in Manna; which are but the Effects of the Operations of Manna, by the Motion, Size, and Figure, of its Particles, on the Eyes and Palate; as the Pain and Sicknes, caused by Manna, are confessedly nothing, but the Effects of its Operations on the Stomach and Guts, by the Size, Motion, and Figure, of its insensible Parts (for by nothing else can a Body operate, as has been proved): As if it could not operate on the Eyes and Palate, and thereby produce in the Mind particular, distinct Ideas, which in itself it has not, as well as we allow it can operate on the Guts and Stomach and thereby produce distinct Ideas, which in itself it has not. These Ideas, being all Effects of the Operations of Manna, on several Parts of our Bodies, by the Size, Figure, Number, and Motion of its Parts; why those produced by the Eyes and Palate, should rather be thought to be really in the Manna, than those produced by the Stomach and Guts; or, why the Pain and Sicknes, Ideas, that are the Effects of Manna, should be thought to be nowhere, when they are not felt; and yet the Sweetnes and Whiteness,

Whiteness, Effects of the same *Manna*, on other Parts of the Body, by Ways equally as unknown, should be thought to exist in the *Manna*, when they are not seen, nor tasted, would need some Reason to explain.

Ideas of Primary Qualities, are Resemblances; of Secondary, not.

§. 19. LET us consider the red and white Colours in *Porphyry*: Hinder Light but from striking on it, and its Colours vanish, it no longer produces any such Ideas in us: Upon the Return of Light, it produces these Appearances on us again. Can any one think any real Alterations are made in the *Porphyry*, by the Presence, or Absence, of Light; and that those Ideas of Whiteness, and Redness, are really in *Porphyry*, in the Light, when, 'tis plain, *it has no Colour in the Dark?* It has, indeed, such a Configuration of Particles, both Night and Day, as are apt, by the Rays of Light rebounding from some Parts of that hard Stone, to produce in us the Idea of Redness, and from others the Idea of Whiteness; but Whiteness, or Redness, are not in it at any time, but such a Texture, that hath the Power to produce such a Sensation in us.

§. 20. POUND an Almond, and the clear white Colour will be altered into a dirty one, and the sweet Taste into an oily one. What real Alteration can the beating of the Pestle make in any Body, but an Alteration of the Texture of it?

§. 21. IDEAS being thus distinguished and understood, we may be able to give an Account, how the same Water, at the same time, may produce the Idea of Cold by one Hand, and of Heat by the other; whereas, it is impossible that the same Water, if those Ideas were really in it, should, at the same time, be both Hot and Cold. For, if we imagine *Warmth*, as it is in our Hands, to be nothing but a certain Sort and Degree of Motion in the minute Particles of our Nerves, or animal Spirits, we may understand how it is possible, that the same Water may, at the same time, produce the Sensation of Heat in one Hand, and Cold in the other; which, yet, Figure never does; that never producing the Idea of a Square by one Hand, which has produced the Idea of a Globe by another. But, if the Sensation of Heat and Cold be nothing, but the Increase, or Diminution, of the Motion of the minute Parts of our Bodies, caused by the Corpuscles

puscles of any other Body, it is easy to be understood, that, if that Motion be greater in one Hand, than in the other ; if a Body be applied to the two Hands, which has, in its minute Particles, a greater Motion, than in those of one of the Hands, and a less, than in those of the other ; it will increase the Motion of the one Hand, and lessen it in the other, and so cause the different Sensations of Heat and Cold, that depend thereon.

§. 22. I HAVE, in what just goes before, been engaged in Physical Enquiries a little farther than, perhaps, I intended. But it being necessary, to make the Nature of Sensation a little understood, and to make the *Difference between the Qualities in Bodies, and the Ideas produced by them in the Mind*, to be distinctly conceived, without which it were impossible to discourse intelligibly of them ; I hope I shall be pardoned this little Excursion into natural Philosophy, it being necessary, in our present Enquiry, to distinguish the *Primary*, and *real Qualities* of Bodies, which are always in them, (*viz.* Solidity, Extension, Figure, Number, and Motion, or Rest; and are sometimes perceived by us, *viz.* when the Bodies, they are in, are big enough singly to be discerned) from those *Secondary* and *imputed Qualities*, which are but the Powers of several Combinations of those Primary ones, when they operate, without being distinctly discerned; whereby we also may come to know what *Ideas* are, and what are not Resemblances of something really existing in the Bodies we denominate from them.

§. 23. THE Qualities then that are in Bodies, *Three Sorts of Qualities in Bodies.*
rightly considered, are of *Three Sorts.*

First, THE Bulk, Figure, Number, Situation, and Motion, or Rest of their solid Parts ; those are in them whether we perceive them, or no ; and when they are of that Size, that we can discover them, we have, by these, an *Idea* of the Thing, as it is in itself, as is plain in Artificial Things. These I call *Primary Qualities*.

Secondly, THE Power that is in any Body, by reason of its insensible, *Primary Qualities*, to operate after a peculiar Manner on any of our Senses, and thereby produce in us the different Ideas of several

several Colours, Sounds, Smells, Tastes, &c. these are usually called Sensible Qualities.

Thirdly, THE Power that is in any Body, by reason of the particular Constitution of its Primary Qualities, to make such a Change in the Bulk, Figure, Texture, and Motion of another Body, as to make it operate on our Senses, differently from what it did before. Thus the Sun has a Power to make Wax white, and Fire to make Lead fluid. These are usually called Powers.

THE first of these, as has been said, I think, may be properly called *Real, Original, or Primary Qualities*, because they are in the Things themselves, whether they are perceived, or no; and, upon their different Modifications, it is, that the secondary Qualities depend.

THE other two are only Powers to act differently upon other Things, which Powers result from the different Modifications of those Primary Qualities.

The 1st are Resemblances. The 2^d thought Resemblances, but are not. The 3^d neither are, nor are thought so.

§. 24. *BUT, tho' these two latter Sorts of Qualities are Powers barely, and nothing but Powers, relating to several other Bodies, and resulting from the different Modifications of the original Qualities; yet they are generally otherwise thought of.* For the second Sort, viz. The Powers, to produce several Ideas in us, by our Senses, are looked upon as real Qualities, in the Things, thus affecting us: But the third Sort are called, and esteemed, barely Powers, v. g. the Idea of Heat, or Light, which we receive by our Eyes, or Touch, from the Sun, are commonly thought real Qualities, existing in the Sun, and something more than mere Powers in it. But, when we consider the Sun, in reference to Wax, which it melts, or blanches, we look on the Whiteness and Softness produced in the Wax, not as Qualities in the Sun, but Effects produced by Powers in it: Whereas, if rightly considered, these Qualities of Light and Warmth, which are Perceptions in me, when I am warmed, or enlightened by the Sun, are no otherwise in the Sun, than the Changes made in the Wax, when it is blanched, or melt-ed,

ed, are in the Sun. They are all of them equally Powers in the Sun, depending on its primary Qualities, whereby it is able in the one Case, so to alter the Bulk, Figure, Texture, or Motion, of some of the insensible Parts of my Eyes, or Hands, as thereby to produce in me the *Idea* of Light, or Heat ; and, in the other, it is able so to alter the Bulk, Figure, Texture, or Motion, of the insensible Parts of the Wax, as to make them fit to produce in me the distinct *Ideas* of White and Fluid.

§. 25. THE Reason why the one are ordinarily taken for real Qualities, and the other only for bare Powers, seems to be, because the Ideas we have of distinct Colours, Sounds, &c. containing nothing at all in them of Bulk, Figure, or Motion, we are not apt to think them the Effects of these primary Qualities, which appear not to our Senses, to operate in their Production ; and with which they have not any apparent Congruity, or conceivable Connexion. Hence it is, that we are so forward to imagine, that those Ideas are the Resemblances of something really existing in the Objects themselves: Since Sensation discovers nothing of Bulk, Figure, or Motion of Parts, in their Production ; nor can Reason shew how Bodies, by their Bulk, Figure, and Motion, should produce in the Mind the Ideas of Blue, or Yellow, &c. But, in the other Case, in the Operations of Bodies, changing the Qualities one of another, we plainly discover, that the Quality produced hath commonly no Resemblance with any thing in the Thing producing it; wherefore, we look on it as a bare Effect of Power. For, tho' receiving the *Idea* of Heat, or Light, from the Sun, we are apt to think 'tis a Perception and Resemblance of such a Quality in the Sun ; yet, when we see Wax, or a fair Face, receive Change of Colour from the Sun, we cannot imagine that to be the Perception, or Resemblance, of any thing in the Sun, because we find not those different Colours in the Sun itself. For, our Senses being able to observe a Likeness, or Unlikeness, of sensible Qualities in two different external Objects, we forwardly enough conclude the Production of any sensible Quality in any Subject, to be an Effect of bare Power, and not the Communication of any Quality, which was really in the Efficient, when we find no such sensible Quality in

the Thing that produced it. But our Senses, not being able to discover any Unlikeness between the *Idea* produced in us, and the Quality of the Object producing it; we are apt to imagine, that our *Ideas* are Resemblances of something in the Objects, and not the Effects of certain Powers, placed in the Modification of their Primary Qualities; with which Primary Qualities the *Ideas* produced in us have no Resemblance.

Secondary Qualities, twofold; 1st, Immediately perceptible; 2dly, Mediate-
 ly perceptible. §. 26. To conclude, besides those before mentioned *Primary Qualities* in Bodies, viz. Bulk, Figure, Extension, Number, and Motion, of their solid Parts; all the rest, whereby we take Notice of Bodies, and distinguish them one from another, are nothing else but several Powers in them, depending on those Primary Qualities; whereby they are fitted, either by immediately operating on our Bodies, to produce several different *Ideas* in us; or else, by operating on other Bodies, so to change their primary Qualities, as to render them capable of producing *Ideas* in us, different from what before they did. The former of these, I think, may be called *Secondary Qualities, immediately perceptible*: The latter, *Secondary Qualities, mediately perceptible*.

C H A P. IX.

Of P E R C E P T I O N .

Perception, the first simple Idea of Reflexion.

§. 1. P E R C E P T I O N , as it is the first Faculty of the Mind, exercised about our *Ideas*; so it is the first and simpl-

est *Idea* we have from Reflexion, and is, by some, called thinking in general. Tho' thinking, in the Propriety of the *English* Tongue, signifies that Sort of Operation of the Mind about its *Ideas*, wherein the Mind is active; where it, with some Degree of voluntary Attention, considers any thing. For in bare, naked Perception, the Mind is, for the most part, only passive; and what it perceives, it cannot avoid perceiving.

§. 2. W H A T

§. 2. *W H A T Perception is*, every one will know better, by reflecting on what he does himself, when he sees, hears, feels, &c. or thinks, than by any Discourse of mine. Whoever reflects, on what passes in his own Mind, cannot miss it; and if he does not reflect, all the Words in the World cannot make him have any Notion of it.

§. 3. *T H I S* is certain, that whatever Alterations are made in the Body, if they reach not the Mind; whatever Impressions are made on the outward Parts, if they are not taken notice of within; there is no Perception. Fire may burn our Bodies, with no other Effect than it does a Billet, unless the Motion be continued to the Brain; and there the Sense of Heat, or *Idea* of Pain, be produced in the Mind, wherein consists *actual Perception*.

§. 4. How often may a Man observe in himself, that whilst his Mind is intently employ'd in the Contemplation of some Objects, and curiously surveying some *Ideas* that are there; it takes no notice of Impressions of sounding Bodies, made upon the Organ of Hearing, with the same Alteration that uses to be for the producing the *Idea* of Sound? A sufficient Impulse there may be on the Organ; but, it not reaching the Observation of the Mind, there follows no Perception; and tho' the Motion, that uses to produce the *Idea* of Sound, be made in the Ear, yet no Sound is heard. Want of Sensation, in this Case, is not thro' any Defect in the Organ, or that the Man's Ears are less affected than at other times, when he does hear; but that, which uses to produce the *Idea*, tho' convey'd in by the usual Organ, not being taken notice of, in the Understanding, and so imprinting no *Idea* on the Mind, there follows no Sensation. *So that wherever there is Sense, or Perception, there some Idea is actually produced, and present in the Understanding.*

§. 5. *T H E R E F O R E* I doubt not but *Children*, by the Exercise of their Senses, about Objects that affect them *in the Womb*, receive some few Ideas, before they are born; as the unavoidable Effects, either of the Bodies that environ them, or else of those Wants,

Is only when the Mind receives the Impression.

Children, tho' they have Ideas in the Womb, have none Innate.

Wants, or Diseases, they suffer ; amongst which (if one may conjecture, concerning Things not very capable of Examination) I think the *Ideas* of Hunger and Warmth are two ; which, probably, are some of the first that Children have, and which they scarce ever part with again.

§. 6. But tho' it be reasonable to imagine, that *Children* receive some *Ideas*, before they come into the World ; yet these simple *Ideas* are far from those *innate Principles*, which some contend for, and we above have rejected. These here mentioned, being the Effects of Sensation, are only from some Affections of the Body, which happen to them there, and so depend on something exterior to the Mind ; no otherwise differing in their Manner of Production from other *Ideas*, derived from Sense, but only in the Precedency of Time : Whereas those innate Principles are supposed to be quite of another Nature ; not coming into the Mind, by any accidental Alterations in, or Operations on the Body ; but, as it were, original Characters impressed upon it, in the very first Moment of its Being and Constitution.

*Which Ideas
first, is not
evident.*

§. 7. As there are some *Ideas*, which we may reasonably suppose may be introduced into the Minds of Children in the Womb, subservient to the Necessities of their Life and Being there ; so, after they are born, those *Ideas* are the *earliest imprinted*, which happen to be the sensible Qualities which first occur to them ; amongst which, Light is not the least considerable, nor of the weakest efficacy. And how covetous the Mind is to be furnish'd with all such *Ideas* as have no Pain accompanying them, may be a little guefs'd, by what is observable in Children new born, who always turn their Eyes to that Part, from whence the Light comes, lay them how you please. But the *Ideas*, that are most familiar at first, being various, according to the divers Circumstances of Childrens first Entertainment in the World ; the Order wherein the several *Ideas* come at first into the Mind, is very various and uncertain also ; neither is it much material to know it.

*Ideas of Sen-
sation often*

§. 8. WE are farther to consider, concerning Perception, that the *Ideas*, we receive by Senfa-
tion,

tion, are often, in grown People, altered by the Judgment, without our taking notice of it. When we set before our Eyes a round Globe, of any uniform Colour,

changed by the Judgment.

v.g. Gold, Alabaster, or Jet; it is certain that the Idea, thereby imprinted in our Mind, is of a flat Circle, variously shadow'd, with several degrees of Light, and Brightnes coming to our Eyes. But we having by Use been accustomed to perceive, what kind of Appearance convex Bodies are wont to make in us, what Alterations are made in the Reflexions of Light, by the difference of the sensible Figures of Bodies ; the Judgment presently, by an habitual Custom, alters the Appearances into their Causes ; so that from that, which truly is Variety of Shadow, or Colour, collecting the Figure, it makes it pass for a Mark of Figure, and frames to itself the Perception of a convex Figure, and an uniform Colour ; when the Idea we receive from thence is only a Plane variously coloured, as is evident in Painting. To which Purpose I shall here insert a Problem of that very ingenious and studious Promoter of real Knowledge, the learned and worthy Mr. Molineux, which he was pleased to send me in a Letter, some Months since ; and it is this : Suppose a Man born blind, and now adult, and taught by his Touch to distinguish between a Cube and a Sphere of the same Metal, and nighly of the same bigness, so as to tell, when he felt one and t'other, which is the Cube, which the Sphere. Suppose then the Cube and Sphere placed on a Table, and the blind Man to be made to see : Quære, Whether by his Sight, before he touched them, he could now distinguish and tell, which is the Globe, which the Cube? To which the acute and judicious Proposer answers: Not. For tho' he has obtain'd the Experience of, how a Globe, and how a Cube, affects his Touch ; yet he has not yet attained the Experience, that, what affects his Touch so or so, must affect his Sight so or so ; or that a protuberant Angle in the Cube, that press'd his Hand unequally, shall appear to his Eye as it does in the Cube. I agree with this thinking Gentleman, whom I am proud to call my Friend, in his Answer to this his Problem ; and am of opinion, that the blind Man, at first sight, would not be able, with Certainty, to say which was the Globe, which the Cube, whilst he only saw them ; tho' he could unerringly

unerringly name them by his Touch, and certainly distinguish them by the difference of their Figures felt. This I have set down, and leave with my Reader, as an Occasion for him to consider, how much he may be beholden to Experience, Improvement, and acquired Notions, where he thinks he has not the least Use of, or Help from them: And the rather, because this observing Gentleman farther adds, that *having, upon the Occasion of my Book, proposed this to divers very ingenious Men, he hardly ever met with one, that at first gave the Answer to it, which he thinks true, till, by hearing his Reasons, they were convinced.*

§. 9. But this is not, I think, usually in any of our *Ideas*, but those receiv'd by *Sight*; because Sight, the most comprehensive of all our Senses, conveying to our Minds the *Ideas* of Light and Colours, which are peculiar only to that Sense; and also the far different *Ideas* of Space, Figure, and Motion, the several Varieties whereof change the Appearances of its proper Object, *viz.* Light and Colours; we bring ourselves by Use to judge of the one by the other. This, in many Cafes, by a settled Habit, in Things whereof we have frequent Experience, is performed so constantly, and so quick, that we take that for the Perception of our Sensation, which is an *Idea*, formed by our Judgment; so that one, *viz.* that of Sensation, serves only to excite the other, and is scarce taken notice of itself: As a Man, who reads, or hears, with Attention or Understanding, takes little notice of the Characters, or Sounds, but of the *Ideas* that are excited in him by them.

§. 10. NOR need we wonder, that this is done with so little Notice, if we consider how very *quick* the *Actions of the Mind* are performed: For, as itself is thought to take up no Space, to have no Extension; so its Actions seem to require no Time, but many of them seem to be crowded into an Instant. I speak this in comparison to the Actions of the Body. Any one may easily observe this in his own Thoughts, who will take the pains to reflect on them. How, as it were in an Instant, do our Minds, with one Glance, see all the Parts of a Demonstration, which may very well be called a long one, if we consider the Time it will require to put it into Words, and Step by Step shew it another.

ther. *Secondly*, We shall not be so much surprised, that this is done in us with so little Notice, if we consider how the Facility, which we get of doing things, by a Custom of doing, makes them often pass in us, without our notice. *Habits*, especially such as are begun very early, come at last to produce *Actions in us*, which often escape our Observation. How frequently do we, in a Day, cover our Eyes with our Eye-lids, without perceiving that we are at all in the Dark? Men that by Custom have got the Use of a By-word, do almost in every Sentence pronounce Sounds, which, tho' taken notice of by others, they themselves neither hear, nor observe: And, therefore, it is not so strange, that our Mind should often change the *Idea* of its Sensation, into that of its Judgment, and make one serve only to excite the other, without our taking notice of it.

§. 11. THIS Faculty of Perception seems to me to be that, which *puts the Distinction betwixt the animal Kingdom, and the inferior Parts of Nature*. For, however Vegetables have, many of them, some Degrees of Motion, and, upon the different Application of other Bodies to them, do very briskly alter their Figure and Motion, and so have obtain'd the Name of sensitive Plants, from a Motion which has some Resemblance to that, which in Animals follows upon Sensation: Yet, I suppose, it is all bare Mechanism; and no otherwise produced, than the turning of a wild Oat-beard, by the Insinuation of the Particles of Moisture; or the short'ning of a Rope, by the Affusion of Water. All which is done without any Sensation in the Subject, or the having or receiving any *Ideas*.

Perception puts the Difference between Animals and Inferior Beings.

§. 12. PERCEPTION, I believe, is in some degree *in all Sorts of Animals*; tho' in some, possibly, the Avenues, provided by Nature for the Reception of Sensations, are so few, and the Perception, they are receiv'd with, so obscure and dull, that it comes extremely short of the Quickness, and Variety of Sensations, which is in other Animals; but yet it is sufficient for, and wisely adapted to, the State and Condition of that Sort of Animals, who are thus made: So that the Wisdom and Goodness of the Maker, plainly appears, in all the Parts of this stupendous

dous Fabric, and all the several Degrees, and Ranks of Creatures in it.

§. 13. WE may, I think, from the Make of an *Oyster*, or *Cockle*, reasonably conclude, that it has not so many, nor so quick Senses, as a Man, or several other Animals ; nor, if it had, would it, in that State and Incapacity of transferring itself from one Place to another, be better'd by them. What good would Sight, and Hearing, do to a Creature that cannot move itself to, or from the Objects, wherein at a distance it perceives Good or Evil? And would not quicknes of Sensation, be an Inconvenience to an Animal, that must lie still, where Chance has once placed it ; and there receive the Afflux of colder, or warmer, clean, or foul Water, as it happens to come to it?

§. 14. BUT yet, I cannot but think, there is some small dull Perception, whereby they are distinguish'd from perfect Insensibility. And that this may be so, we have plain Instances, even in Mankind itself. Take one, in whom decrepid old Age has blotted out the Memory of his past Knowledge, and clearly wiped out the *Ideas*, his Mind was formerly stored with ; and has, by destroying his Sight, Hearing, and Smell, quite, and his Taste to a great degree, stopt up almost all the Passages for new ones to enter ; or, if there be some of the Inlets yet half open, the Impressions made are scarce perceived, or not at all retained. How far such an one (notwithstanding all that is boasted of innate Principles) is in his Knowledge and intellectual Faculties, above the Condition of a *Cockle*, or an *Oyster*, I leave to be considered. And, if a Man has passed sixty Years in such a State, as it is possible he might, as well as three Days; I wonder what difference there would have been in any intellectual Perfections, between him and the lowest Degree of Animals.

Perception, the Inlet of Knowledge. §. 15. PERCEPTION, then, being the first Step and Degree towards Knowledge, and the Inlet of all the Materials of it; the fewer Senses any Man, as well as any other Creature, hath ;

and the fewer and duller the Impressions are, that are made by them ; and the duller the Faculties are, that are employ'd about them ; the more remote are they from that Knowledge, which is

is to be found in some Men. But this being in great variety of Degrees (as may be perceived amongst Men) cannot certainly be discover'd in the several Species of Animals, much less in their particular Individuals. It suffices me only to have remark'd here, that Perception is the first Operation of all our intellectual Faculties, and the Inlet of all Knowledge into our Minds. And, I am apt too to imagine, that it is Perception in the lowest degree of it, which puts the Boundaries between Animals, and the inferior Ranks of Creatures. But this I mention only as my Conjecture, by the bye; it being indifferent to the Matter in hand, which way the Learned shall determine of it.

C H A P. X.

Of R E T E N T I O N.

§. 1. THE next Faculty of the Mind, *Contemplation*, whereby it makes a farther Progress towards Knowledge, is that which I call *Retention*, or the keeping of those simple *Ideas*, which, from Sensation, or Reflexion, it hath received. This is done two Ways: *First*, by keeping the *Idea*, which is brought into it, for some Time actually in View; which is called *Contemplation*.

§. 2. THE other Way of Retention, is the *Memory*. Power to revive again in our Minds those *Ideas*, which after imprinting have disappeared, or have been as it were laid aside out of Sight; and thus we do, when we conceive Heat, or Light, Yellow, or Sweet, the Object being removed. This is *Memory*, which is, as it were, the Store-house of our *Ideas*. For the narrow Mind of Man, not being capable of having many *Ideas* under View, and Consideration at once, it was necessary to have a Repository, to lay up those *Ideas*, which, at another Time, it might have Use of. But our *Ideas* being nothing but actual Perceptions in the Mind, which cease to be any thing, when there is no Perception of them, this *laying up* of our *Ideas*, in the Repository of the Memory, signifies no more but this, that the Mind

has a Power, in many Cases, to revive Perceptions, which it has once had, with this additional Perception annexed to them, that it has had them before : And in this Sense it is, that our *Ideas* are said to be in our *Memories*, when indeed they are actually nowhere ; but only there is an Ability in the Mind, when it will, to revive them again, and, as it were, paint them anew on itself, tho' some with more, some with less Difficulty; some more lively, and others more obscurely. And thus it is, by the Assistance of this Faculty, that we are said to have all those *Ideas* in our *Understandings*, which, tho' we do not actually contemplate, yet we can bring in Sight, and make appear again, and be the Objects of our Thoughts, without the Help of those sensible Qualities, which first imprinted them there.

Attention, Re-petition, Pleasure and Pain, fix Ideas. §. 3. ATTENTION and Repetition help much to the fixing any *Ideas* in the *Memory*; but those, which naturally, at first, make the deepest and most lasting Impression, are those which are accompanied with *Pleasure*, or *Pain*. The great Business of the Senses, being to make us take notice of what hurts, or advantages the Body, it is wisely ordered by Nature (as has been shewn) that Pain should accompany the Reception of several *Ideas*; which, supplying the Place of Consideration and Reasoning in Children, and acting quicker than Consideration in grown Men, makes both the Old and Young avoid painful Objects, with that Haste which is necessary for their Preservation ; and in both, settles in the *Memory* a Caution for the future.

Ideas fade in the Memory. §. 4. CONCERNING the several Degrees of lasting, wherewith *Ideas* are imprinted on the *Memory*, we may observe, that some of them have been produced in the Understanding, by an Object affecting the Senses once only, and no more than once; others, that have more than once offered themselves to the Senses, have yet been little taken notice of ; the Mind, either heedless, as in Children, or otherwise employ'd, as in Men, intent only on one thing, not settling the Stamp deep into itself. And in some, where they are set on with Care, and repeated Impressions, either thro' the Temper of the Body, or some other Default, the *Memory* is ver-

ry weak. In all these Cases, *Ideas* in the Mind quickly fade, and often vanish quite out of the Understanding, leaving no more Footsteps, or remaining Characters of themselves, than Shadows do, flying over Fields of Corn ; and the Mind is as void of them, as if they never had been there.

§. 5. Thus many of those *Ideas*, which were produced in the Minds of Children, in the beginning of their Sensation, (some of which, perhaps, as of some Pleasures and Pains, were before they were born, and others in their Infancy) if, in the future Course of their Lives, they are not repeated again, are quite lost, without the least Glimpse remaining of them. This may be observed in those, who, by some Mischance, have lost their Sight, when they were very young, in whom the *Ideas* of Colours, having been but slightly taken notice of, and ceasing to be repeated, do quite wear out ; so that some Years after, there is no more Notion, nor Memory of Colours left in their Minds, than in those of People born blind. The Memory, in some Men, it is true, is very tenacious, even to a Miracle ; but yet there seems to be a constant Decay of all our *Ideas*, even of those which are struck deepest, and in Minds the most retentive ; so that if they be not sometimes renewed, by repeated Exercise of the Senses, or Reflexion on those Kinds of Objects, which at first occasion'd them, the Print wears out, and at last there remains nothing to be seen. Thus the *Ideas*, as well as Children, of our Youth, often die before us : And our Minds represent to us those Tombs, to which we are approaching ; where, tho' the Brabs and Marbie remain, yet the Inscriptions are effaced by Time, and the Imagery moulders away. *The Pictures drawn in our Minds, are laid in fading Colours*; and, if not sometimes refreshed, vanish and disappear. How much the Constitution of our Bodies, and the Make of our Animal Spirits, are concerned in this, and whether the Temper of the Brain makes this Difference, that in some, it retains the Characters drawn on it like Marble, in others, like Free Stone, and, in others, little better than Sand, I shall not here enquire ; tho' it may seem probable, that the Constitution of the Body, does sometimes influence the Memory ; since we oftentimes find a Disease quite strip the Mind of all its *Ideas*, and the Flaines of a Fever,

a Fever, in a few Days, calcine all those Images to Dust and Confusion, which seem'd to be as lasting, as if graved in Marble.

Constantly re-peated Ideas can scarce be lost. §. 6. But, concerning the *Ideas* themselves, it is easy to remark, that those that are *ofteneſt re-freſched*, (amongſt which are thoſe that are conveyed into the Mind, by more Ways than one) by a frequent Return of the Objects, or Actions, that produced them, *fix themſelves best in the Memory*, and remain cleareſt, and longest there: And therefore thoſe, which are of the original Qualities of Bodies, viz. *Solidity, Extension, Figure, Motion, and Rest*; and thoſe, that almost constantly affect our Bodies, as *Heat and Cold*; and thoſe, which are the Affections of all Kinds of Beings, as *Exiſtence, Duration, and Number*, which almost every Object, that affects our Senses, every Thought, which employs our Minds, bring along with them: These, I ſay, and the like *Ideas*, are ſeldom quite lost, whilst the Mind retains any *Ideas* at all.

In rememb'ring, the Mind is often active. §. 7. In this Secondary Perception, as I may so call it, or viewing again the *Ideas* that are lodg'd in the Memory, the Mind is oftentimes more

than barely paffive; the Appearances of those dormant Pictures, depending ſometimes on the Will. The Mind very often ſets itſelf on work, in ſearch of ſome hidden *Idea*, and turns, as it were, the Eye of the Soul upon it; tho' ſometimes too, they ſtart up in our Minds, of their own accord, and offer themſelves to the Understanding; and very often are rouzed and tumbled out of their dark Cells, into open Day-light, by ſome turbulent and tempeſtuous Paſſions: Our Affections bringing *Ideas* to our Memory, which had otherwife lain quiet and unregarded. This farther is to be obſerved, concerning *Ideas* lodged in the Memory, and upon Occation revived by the Mind, that they are not only (as the Word, *revive*, imports) none of them new ones; but also that the Mind takes Notice of them, as of a former Impreſſion, and renewſ its Acquaintance with them, as with *Ideas* it had known before. So that, tho' *Ideas* formerly imprinted, are not all conſtantly in View, yet, in Remembrance, they are conſtantly known to be ſuch as have been formerly

formerly imprinted; *i. e.* in View, and taken Notice of before, by the Understanding.

§. 8. MEMORY, in an intellectual Creature, is necessary in the next Degree to Perception. It is of so great moment, that where it is wanting, all the rest of our Faculties are in a great Measure useless: And we, in our Thoughts, Reasonings, and Knowledge, could not proceed beyond present Objects, were it not for the Assistance of our Memories, wherein there may be *Two Defects*.

First, THAT it loses the Idea quite, and so far it produces perfect Ignorance. For, since we can know nothing farther than we have the Idea of it, when that is gone, we are in perfect Ignorance.

Secondly, THAT it moves slowly, and retrieves not the Ideas that it has, and are laid up in store, quick enough to serve the Mind upon Occasions. This, if it be to a great Degree, is Stupidity; and he, who, thro' this Default in his Memory, has not the Ideas, that are really prescrv'd there, ready at hand, when Need and Occasion calls for them, were almost as good be without them quite, since they serve him to little Purpose. The dull Man, who loses the Opportunity, whilst he is seeking in his Mind for those Ideas that should serve his Turn, is not much more happy in his Knowledge, than one that is perfectly ignorant. 'Tis the Business, therefore, of the Memory, to furnish to the Mind those dormant Ideas, which it has present Occasion for; in the having them ready at hand, on all Occasions, consists that which we call *Invention, Fancy, and Quickness of Parts.*

§. 9. THESE are Defects, we may obscrve, in the Memory of one Man, compared with another. There is another Defect, which we may conceive to be in the Memory of Man in general; compared with some superior, created, intellectual Beings, which, in this Faculty, may so far excel Man, that they may have constantly in View the whole Scene of all their former Actions, wherein no one of the Thoughts, they have ever had, may slip out of their Sight. The Omnipotence of God, who knows all Things, past, present, and to come, and to whom the

Thoughts

*Two Defects in
the Memory,
Oblivion and
Slowness.*

Thoughts of Mens Hearts always lie open, may satisfy us of the Possibility of this. For who can doubt, but God may communicate to those glorious Spirits, his immediate Attendants, any of his Perfections, in what Proportion he pleases, as far as created finite Beings can be capable? 'Tis reported of that Prodigy of Parts, Monsieur *Paschal*, that, till the Decay of his Health had impaired his Memory, he forgot nothing of what he had done, read, or thought, in any Part of his rational Age. This is a Privilege so little known to most Men, that it seems almost incredible to those, who, after the ordinary way, measure all others by themselves: But yet, when considered, may help us to enlarge our Thoughts towards greater Perfections of it, in superior Ranks of Spirits. For this of Mr. *Paschal* was still with the Narrowness, that human Minds are confin'd to here, of having great Variety of *Ideas* only by Succession, not all at once: Whereas the several Degrees of Angels may probably have larger Views, and some of them be endow'd with Capacities able to retain together, and constantly set before them, as in one Picture, all their past Knowledge at once. This we may conceive, would be no small Advantage to the Knowledge of a thinking Man, if all his past Thoughts and Reasonings could be always present to him. And, therefore, we may suppose it one of those Ways, wherein the Knowledge of separate Spirits may exceedingly surpass ours.

Brutes have Memory. §. 10. THIS Faculty of laying up, and retaining the *Ideas*, that are brought into the Mind, several other *Animals* seem to have, to a great Degree,

as well as Man. For, to pass by other Instances, Birds learning of Tunes, and the Endeavours one may observe in them to hit the Notes right, put it past doubt, with me, that they have Perception, and retain *Ideas* in their Memories, and use them for Patterns. For it seems to me impossible, that they should endeavour to conform their Voices to Notes, (as 'tis plain they do) of which they had no *Ideas*. For tho' I should grant Sound may mechanically cause a certain Motion of the animal Spirits, in the Brains of those Birds, whilst the Tune is actually playing; and that Motion may be continued on, to the Muscles of

of the Wings, and so the Bird mechanically be driven away by certain Noises, because this may tend to the Bird's Preservation: Yet that can never be supposed a Reason, why it should cause, mechanically, either whilst the Tune was playing, much less after it has ceased, such a Motion in the Organs of the Bird's Voice, as should conform it to the Notes of a foreign Sound, which Imitation can be of no Use to the Bird's Preservation: But, which is more, it cannot, with any Appearance of Reason, be supposed, (much less proved) that Birds, without Sense and Memory, can approach their Notes, nearer and nearer, by Degrees, to a Tune play'd Yesterday; which, if they have no *Idea* of in their Memory, is now no where, nor can be a Pattern for them to imitate, or which any repeated Essays can bring them nearer to. Since there is no Reason, why the Sound of a Pipe should leave Traces in their Brains, which, not at first, but by their After-endeavours, should produce the like Sounds; and why the Sounds they make themselves, should not make Traces, which they should follow, as well as those of the Pipe, is impossible to conceive.

C H A P. XI.

Of D I S C E R N I N G , and other Operations of the Mind.

§. I. **A** NOTHER Faculty we may take *No Knowledge without Discerning.*

Discerning and distinguishing between several *Ideas* it has. It is not enough to have a confused Perception of something in general: Unless the Mind had a distinct Perception of different Objects, and their Qualities, it would be capable of very little Knowledge; tho' the Bodies, that affect us, were as busy about us, as they are now, and the Mind were continually employ'd in Thinking. On this Faculty of distinguishing one Thing from another, depends the *Evidence and Certainty* of several, even very general Propositions, which have passed for innate

nate Truths ; because Men, overlooking the true Cause, why those Propositions find universal Assent, impute it wholly to native, uniform Impressions ; whereas it in Truth depends upon this clear, discerning Faculty of the Mind, whereby it perceives two Ideas to be the same, or different. But of this more hereafter.

The Difference of Wit and Judgment. §. 2. How much the Imperfection of accurately discriminating Ideas one from another, lies either in the Dulness, or Faults, of the Organs

of Sense ; or want of Acuteness, Exercise, or

Attention, in the Understanding ; or Haste and Precipitancy, natural to some Tempers, I will not here examine : It suffices to take notice, that this is one of the Operations, that the Mind may reflect on, and observe in itself. It is of that Consequence to its other Knowledge, that, so far as this Faculty is in itself dull, or not rightly made use of, for the distinguishing one thing from another ; so far our Notions are confused, and our Reason and Judgment disturbed, or misled. If, in having our Ideas in the Memory ready at hand, consists Quickness of Parts ; in this of having them unconfused, and being able nicely to distinguish one Thing from another, where there is but the least Difference, consists, in a great measure, the Exactness of Judgment, and Clearness of Reason, which is to be observed in one Man above another. And hence, perhaps, may be given some Reason of that common Observation, that Men, who have a great deal of Wit, and prompt Memories, have not always the clearest Judgment, or deepest Reason : For *Wit*, lying most in the Assemblage of Ideas, and putting those together with Quickness and Variety, wherein can be found any Resemblance, or Congruity, thereby to make up pleasant Pictures, and agreeable Visions in the Fancy ; Judgment, on the contrary, lies quite on the other Side, in separating carefully, one from another, Ideas, wherein can be found the least Difference, thereby to avoid being misled by Similitude, and, by Affinity, to take one Thing for another. This is a Way of proceeding quite contrary to Metaphor and Allusion ; wherein, for the most part, lies that Entertainment and Pleasantry of Wit, which strikes so lively on the Fancy, and therefore so acceptable to all People ; because its Beauty appears at first Sight,

Sight, and there is required no Labour of Thought, to examine what Truth, or Reason, there is in it. The Mind, without looking any farther, rests satisfied with the Agreeableness of the Picture, and the Gaiety of the Fancy; and it is a Kind of an Affront to go about to examine it, by the severe Rules of Truth and good Reason; whereby it appears, that it consists in something that is not perfectly conformable to them.

§. 3. To the well distinguishing our Ideas, it *Clearness alone
chiefly contributes, that they be clear and deter-
minate: And, when they are so, it will not breed* *binders Confu-
sion.*

*any Confusion, or Mistake, about them, tho' the Senses should
(as sometimes they do) convey them from the same Object dif-
ferently, on different Occasions, and so seem to err. For tho' a
Man, in a Fever, should, from Sugar, have a bitter Taste, which,
at another time, would produce a sweet one; yet, the Idea of
Bitter in that Man's Mind, would be as clear and distinct from
the Idea of Sweet, as if he had tasted only Gall. Nor does it
make any more Confusion, between the two Ideas of Sweet and
Bitter, that the same Sort of Body produces at one time one,
and at another time another Idea, by the Taste, than it makes
a Confusion in two Ideas of White and Sweet, or White and
Round, that the same Piece of Sugar produces them both in the
Mind at the same time. And the Ideas of Orange-colour and
Azure, that are produced in the Mind, by the same Parcel of the
Infusion of *Lignum Nephriticum*, are no less distinct Ideas, than
those of the same Colours, taken from two very different Bodies.*

§. 4. THE COMPARING them one with another, in respect of Extent, Degrees, Time, Place, or any other Circumstances, is another Operation of the Mind about its Ideas, and is that, upon which depends all that large Tribe of Ideas, comprehended under Relation; which, of how vast an Extent it is, I shall have Occasion to consider hereafter.

§. 5. How far Brutes partake in this Faculty, is not easy to determine; I imagine they have *Brutes com-
pare but im-
perfectly.* it not in any great Degree: For tho' they probably have several Ideas distinct enough, yet it seems to me to be the Prerogative of Human Understanding, when it has suffi-

ciently distinguished any *Ideas*, so as to perceive them to be perfectly different, and so consequently two, to cast about and consider in what Circumstances they are capable to be compared: And, therefore, I think, *Beasts compare* not their *Ideas*, farther than some sensible Circumstances annexed to the Objects themselves. The other Power of comparing, which may be observed in Men, belonging to general *Ideas*, and useful only to abstract Reasonings, we may probably conjecture Beasts have not.

§. 6. THE next Operation, we may observe in *Compounding*. the Mind about its *Ideas*, is *COMPOSITION*; whereby it puts together several of those simple ones it has received from Sensation and Reflexion, and combines them into complex ones. Under this of Composition, may be reckon'd also, that of *ENLARGING*; wherein, tho' the Composition does not so much appear, as in more complex ones, yet it is, nevertheless, a putting several *Ideas* together, tho' of the same Kind. Thus, by adding several Units together, we make the *Idea* of a Dozen; and putting together the repeated *Ideas* of several Perches, we frame that of a Furlong.

Brutes compound but little. §. 7. In this, also, I suppose, *Brutes* come far short of Men: For tho' they take in, and retain together several Combinations of simple *Ideas*, as, possibly, the Shape, Smell, and Voice of his Master, make up the complex *Idea* a Dog has of him; or, rather, are so many distinct Marks, whereby he knows him; yet, I do not think they do of themselves ever compound them, and *make complex Ideas*: And, perhaps, even where we think they have complex *Ideas*, 'tis only one simple one that directs them in the Knowledge of several Things, which, possibly, they distinguish less by their Sight than we imagine: For I have been credibly informed, that a Bitch will nurse, play with, and be fond of young Foxes, as much as, and in place of her Puppies, if you can but get them once to suck her, so long, that her Milk may go thro' them. And those Animals, which have a numerous Brood of young ones at once, appear not to have any Knowledge of their Number; for, tho' they are mightily concerned for any of their young, that are taken from them, whilst they are in sight, or hearing;

ing ; yet, if one, or two of them be stolen from them in their Absence, or without Noise, they appear not to miss them, or to have any Sense that their Number is lessen'd.

§. 8. WHEN Children have, by repeated Sensations, got Ideas fixed in their Memories, they begin, by degrees, to learn the Use of Signs. And, when they have got the Skill to apply the Organs of Speech to the framing of articulate Sounds, they begin to make *use of Words*, to signify their Ideas to others : These verbal Signs they sometimes borrow from others, and sometimes make themselves, as one may observe among the new and unusual Names Children often give to Things, in their first Use of Language.

§. 9. THE Use of Words then being to stand as outward Marks of our internal Ideas, and those Ideas being taken from particular Things, if every particular Idea that we take in, should have a distinct Name, Names must be endless. To prevent this, the Mind makes the particular Ideas, received from particular Objects, to become general ; which is done by considering them as they are in the Mind such Appearances, separate from all other Existences, and the Circumstances of real Existence, as Time, Place, or any other concomitant Ideas. This is called ABSTRACTION, whereby Ideas, taken from particular Beings, become general Representatives of all of the same Kind ; and their Names, general Names, applicable to whatever exists, conformable to such abstract Ideas. Such precise, naked Appearances in the Mind, without considering how, whence, or with what others they came there, the Understanding lays up (with Names commonly annexed to them) as the Standards to rank real Existences into Sorts, as they agree with these Patterns, and to denominate them accordingly. Thus, the same Colour, being observed Today in Chalk, or Snow, which the Mind, Yesterday, received from Milk, it considers that Appearance alone makes it a Representative of all of that Kind ; and having given it the Name, Whiteness, it, by that Sound, signifies the same Quality, wherefore to be imagined, or met with ; and thus Universals, whether Ideas, or Terms, are made.

Naming.

Abstracting.

*Brutes abstract
not.*

§. 10. If it may be doubted, whether *Beasts* compound and enlarge their *Ideas* that way, to any degree; this, I think, I may be positive in,

that the Power of *Abstracting* is not at all in them; and that the having of general *Ideas*, is that which puts a perfect Distinction betwixt Man and Brutes, and is an Excellency, which the Faculties of Brutes do, by no means, attain to. For it is evident, we observe no Footsteps in them, of making use of general Signs for universal *Ideas*; from which we have Reason to imagine, that they have not the Faculty of abstracting, or making general *Ideas*, since they have no Use of Words, or any other general Signs.

§. 11. NOR can it be imputed to their want of fit Organs to frame articulate Sounds, that they have no Use, or Knowledge, of general Words; since many of them, we find, can fashion such Sounds, and pronounce Words distinctly enough, but never with any such Application. And, on the other side, Men, who, thro' some Defect in the Organs, want Words, yet fail not to express their universal *Ideas* by Signs, which serve them instead of general Words; a Faculty which we see Beasts come short in. And, therefore, I think, we may suppose, that 'tis in this, that the Species of Brutes are discriminated from Man; and 'tis that proper Difference, wherein they are wholly separated, and which at last widens to so vast a Distance: For, if they have any *Ideas* at all, and are not bare Machines, (as some would have them) we cannot deny them to have some Reason. It seems as evident to me, that they do, some of them, in certain Instances, reason, as that they have Sense; but it is only in particular *Ideas*, just as they received them from their Senses. They are the best of them tied up within those narrow Bounds, and have not (as I think, the Faculty to enlarge them by any kind of *Abstraction*.)

*Idiots and
Madmen.*

§. 12. How far *Idiots* are concerned in the Want, or Weakness, of any, or all of the foregoing Faculties, an exact Observation of their several Ways of faltering would no doubt discover: For those, who either perceive but dully, or retain the *Ideas* that come into their Minds but ill, who cannot readily excite, or compound them, will have little Matter to think on. Those, who cannot distinguish,

distinguish, compare, and abstract, would hardly be able to understand, and make use of Language, or judge, or reason, to any tolerable degree; but only a little, and imperfectly, about Things present, and very familiar to their Senses. And, indeed, any of the fore mentioned Faculties, if wanting, or out of order, produce suitable Defects in Mens Understandings and Knowledge.

§. 13. IN fine, the Defects of *Naturals* seem to proceed from Want of Quickness, Activity, and Motion, in the intellectual Faculties, whereby they are deprived of Reason; whereas *Madmen*, on the other side, seem to suffer by the other Extreme: For they do not appear to me have lost the Faculty of Reasoning; but, having joined together some *Ideas* very wrongly, they mistake them for Truths; and they err, as Men do that argue right, from wrong Principles. For, by the Violence of their Imaginations, having taken their Fancies for Realities, they make right Deductions from them. Thus you shall find a distracted Man fancying himself a King, with a right Inference, require suitable Attendance, Respect, and Obedience: Others, who have thought themselves made of Glass, have used the Caution necessary to preserve such brittle Bodies. Hence it comes to pass, that a Man who is very sober, and of a right Understanding in all other things, may, in one particular, be as frantic as any in *Bedlam*; if either, by any sudden very strong Impression, or long fixing his Fancy upon one sort of Thoughts, incoherent *Ideas* have been cemented together so powerfully, as to remain united. But there are Degrees of Madness, as of Folly; the disorderly jumbling *Ideas* together, is in some more, and some less. In short, herein seems to lie the Difference between Idiots and Madmen, that Madmen put wrong *Ideas* together, and so make wrong Propositions, but argue and reason right from them; but Idiots make very few or no Propositions, and reason scarce at all.

§. 14. THESE, I think, are the first Faculties and Operations of the Mind, which it makes use of in Understanding; and tho' they are exercised about all its *Ideas* in general, yet the Instances, I have hitherto given, have been chiefly in simple *Ideas*; and I have subjoined the Ex-
Method.
plication

plication of these Faculties of the Mind, to that of simple *Ideas*, before I come to what I have to say concerning complex ones, for these following Reasons:

First, BECAUSE several of these Faculties being exercised at first, principally about simple *Ideas*, we might, by following Nature in its ordinary Method, trace and discover them in their Rise, Progress, and gradual Improvements.

Secondly, BECAUSE, observing the Faculties of the Mind, how they operate about simple *Ideas*, which are usually, in most Mens Minds, much more clear, precise, and distinct, than complex ones, we may the better examine and learn how the Mind abstracts, denominates, compares, and exercises its other Operations, about those which are complex, wherein we are much more liable to mistake.

Thirdly, BECAUSE these very Operations of the Mind, about *Ideas*, receiv'd from Sensation, are themselves, when reflected on, another Set of *Ideas*, deriv'd from that other Source of our Knowledge, which I call *Reflexion*, and, therefore, fit to be considered in this Place, after the simple *Ideas* of *Sensation*. Of Compounding, Comparing, Abstracting, &c. I have but just spoken, having occasion to treat of them more at large in other Places.

These are the Beginnings of Human Knowledge. §. 15. AND thus I have given a short, and, I think, true *History of the first Beginnings of Human Knowledge*, whence the Mind has its first Objects, and by what Steps it makes its Progress, to the laying in, and storing up those *Ideas*, out of which is to be framed all the Knowledge it is capable of; wherein I must appeal to Experience and Observation, whether I am in the right: The best Way to come to Truth, being to examine things as really they are, and not to conclude they are, as we fancy of ourselves, or have been taught by others to imagine.

Appeal to Experience. §. 16. To deal truly, *this is the only Way*, that I can discover, whereby the *Ideas* of Things are brought into the *Understanding*: If other Men have either innate *Ideas*, or infused Principles, they have Reason to enjoy them; and, if they are sure of it, it is impossible for others to deny them the Privilege that they have above their

Neighbours.

Neighbours. — I can speak, but of what I find in myself, and is agreeable to those Notions; which, if we will examine the whole Course of Men, in their several Ages, Countries, and Educations, seem to depend on those Foundations, which I have laid, and to correspond with this Method, in all the Parts, and Degrees thereof.

§. 17. I PRETEND not to teach, but to enquire, *Dark Room.* and, therefore, cannot but confess here again, That external and internal Sensation are the only Passages, that I can find, of Knowledge, to the Understanding. These alone, as far as I can discover, are the Windows, by which Light is let into this *Dark Room*: For, methinks, the *Understanding* is not much unlike a Closet, wholly shut from Light, with only some little Opening left, to let in external visible Resemblances, or *Ideas* of Things without: Would the Pictures, coming into such a dark Room, but stay there, and lie so orderly, as to be found, upon occasion, it would very much resemble the Understanding of a Man, in reference to all Objects of Sight, and the *Ideas* of them.

THESE are my Guesses, concerning the Means, whereby the Understanding comes to have, and retain, simple *Ideas*, and the Modes of them, with some other Operations about them. I proceed now, to examine some of these simple *Ideas*, and their Modes, a little more particularly.

C H A P. XII.

Of Complex IDEAS.

§. 1. **W**E have hitherto considered those Ideas, in the Reception whereof the Mind is only passive, which are those simple ones, received from *Sensation*, and *Reflexion*, before mentioned, whereof the Mind cannot make one to itself, nor have any *Idea*, which does not wholly consist of them. But, as the Mind is wholly passive, in the Reception of all its simple Ideas, so it exerts several Acts of its own, whereby, out of its simple Ideas, as the Materials and Foundations of the rest, the other

*Made by the
Simple ones.
Mind out of*

are

are framed. The Acts of the Mind, wherein it exerts its Power over its simple *Ideas*, are chiefly these three : 1. Combining several simple *Ideas* into one compound one, and thus all complex *Ideas* are made. 2. The second, is bringing two *Ideas*, whether simple, or complex, together; and setting them by one another, so as to take a View of them at once, without uniting them into one ; by which way, it gets all its *Ideas* of Relations. 3. The third, is separating them from all other *Ideas*, that accompany them, in their real Existence; this is called *Abstraction*: And thus all its general *Ideas* are made. This shews Man's Power, and its way of Operation, to be much-what the same, in the Material, and Intellectual World. For the Materials, in both, being such as he has no Power over, either to make, or destroy, all, that Man can do, is either to unite them together, or to set them by one another, or wholly separate them. I shall here begin with the first of these, in the Consideration of complex *Ideas*, and come to the other two, in their due Places. As simple *Ideas* are observed to exist, in several Combinations united together, so the Mind has a Power to consider several of them, united together, as one *Idea*; and that not only as they are united in external Objects, but as itself has join'd them. *Ideas*, thus made up of several simple ones put together, I call *Complex*; such as are *Beauty*, *Gratitude*, *a Man*, *an Army*, *the Universe*; which, tho' complicated of various simple *Ideas*, or *complex Ideas*, made up of simple ones, yet are, when the Mind pleases, considered each, by itself, as one entire thing, and signified by one Name.

Made voluntarily. §. 2. In this Faculty of repeating and joining together its *Ideas*, the Mind has great Power, in varying and multiplying the Objects of its Thoughts, infinitely beyond what *Sensation*, or *Reflexion* furnished it with; but all this is still confined to those simple *Ideas*, which it received from those two Sources, and which are the ultimate Materials of all its Compositions. For simple *Ideas* are all from Things themselves, and of these the *Mind can have no more, nor any other than what are suggested to it*. It can have no other *Ideas* of sensible Qualities, than what come from without, by the Senses,

nor any *Ideas* of other kind of Operations, of a thinking Substance, than what it finds in itself ; but, when it has once got these simple *Ideas*, it is not confined barely to Observation, and what offers itself from without : It can, by its own Power, put together those *Ideas* it has, and make new *Complex ones*, which it never received, so united.

§. 3. COMPLEX *Ideas*, however compounded and decompounded, tho' their Number be infinite, and the Variety endless, wherewith they fill and entertain the Thoughts of Men ; yet, I think, they may be all reduced under these three Heads.

Are either Modes, Substances, or Relations.

1. *Modes.*
2. *Substances.*
3. *Relations.*

§. 4. First, MODES I call such Complex *Ideas*, which, however compounded, contain not in them the Supposition of subsisting by themselves, but are considered as Dependencies on, or Affections of Substances ; such are the *Ideas*, signified by the Words *Triangle*, *Gratitude*, *Murder*, &c. And if in this I use the Word *Mode*, in somewhat a different Sense from its ordinary Signification, I beg pardon ; it being unavoidable, in Discourses differing from the ordinary, received Notions, either to make new Words, or to use old Words, in somewhat a new Signification ; the latter whereof, in our present Case, is, perhaps, the more tolerable of the two.

§. 5. Of these *Modes*, there are two Sorts, which deserve distinct Consideration. First, Simple and mixed Modes. There are some which are only Variations, or different Combinations of the same simple *Idea*, without the Mixture of any other ; as a Dozen, or Score ; which are nothing but the *Ideas* of so many distinct Units added together ; and these I call *Simple Modes*, as being contained within the Bounds of one simple *Idea*. Secondly, There are others, compounded of simple *Ideas*, of several Kinds, put together, to make one complex one ; v. g. *Beauty*, consisting of a certain Composition

position of Colour and Figure, causing Delight in the Beholder; *Theft*, which, being the concealed Change of the Possession of any thing, without the Consent of the Proprietor, contains, as is visible, a Combination of several Ideas of several Kinds; and these I call *Mixed Modes*.

Substances single, or collective. §. 6. Secondly, THE Ideas of Substances are such Combinations of simple Ideas, as are taken to represent distinct particular Things, subsisting by themselves; in which the supposed, or confused Idea of Substance, such as it is, is always the first and chief. Thus, if to Substance be joined the simple Idea of a certain dull, whitish Colour, with certain Degrees of Weight, Hardness, Ductility, and Fusibility, we have the *Idea of Lead*; and a Combination of the Ideas of a certain Sort of Figure, with the Powers of Motion, Thought, and Reasoning, joined to Substance, make the ordinary Ideas of a *Man*. Now, of Substances also, there are two Sorts of Ideas; one of single Substances, as they exist separately, as of a *Man*, or a *Sheep*; the other of several of those put together, as an *Army* of Men, or *Flock* of Sheep; which collective Ideas of several Substances, thus put together, are as much, each of them, one single Idea, as that of a *Man*, or an *Unit*.

Relation. §. 7. Thirdly, THE last Sort of complex Ideas, is that we call Relation, which consists in the Consideration, and comparing one Idea with another. Of these several Kinds, we shall treat in their Order.

The abstrusest Ideas from the two Sources. §. 8. If we trace the Progress of our Minds, and with Attention observe, how it repeats, adds together, and unites its simple Ideas, received from Sensation, or Reflexion, it will lead us farther than at first, perhaps, we should have imagined. And, I believe, we shall find, if we warily observe the Originals of our Notions, that even the *most abstruse* Ideas, how remote soever they may seem from Sense, or from any Operation of our Minds, are yet only such as the Understanding frames to itself, by repeating and joining together Ideas, that it had, either from Objects of Sense, or from its own Operations about them: So that those even large and abstract Ideas, are derived from Sensation,

or Reflexion, being no other than what the Mind, by the ordinary Use of its own Faculties, employed about *Ideas*, received from Objects of Sense, or from the Operations it observes in itself about them, may, and does attain unto. This I shall endeavour to shew, in the *Ideas* we have of *Space*, *Time*, and *Infinity*, and some few others, that seem the most remote from those Originals.

C H A P. XIII.

Of Simple Modes; and, first, of the Simple Modes of Space.

§. 1. **T**HO', in the foregoing Part, I have often mentioned simple *Ideas*, which are truly the Materials of all our Knowledge; yet having treated of them there, rather in the way that they come into the Mind, than as distinguished from others, more compounded, it will not be, perhaps, amiss to take a View of some of them again, under this Consideration, and examine those different *Modifications of the same Idea*; which the Mind either finds in Things existing, or is able to make within itself, without the Help of any extrinsical Object, or any foreign Suggestion.

THOSE *Modifications of any one simple Idea* (which, as has been said, I call *Simple Modes*) are as perfectly different and distinct *Ideas* in the Mind, as those of the greatest Distance and Contrariety. For the *Idea of Two* is as distinct from that of *One*, as *Blueness* from *Heat*, or either of them from any Number: And yet it is made up only of that simple *Idea* of an Unit repeated; and Repetitions of this Kind, joined together, make those distinct *Simple Modes*, of a *Dozen*, a *Gross*, a *Million*.

§. 2. I SHALL begin with the *Simple Idea of Space*. I have shewed above, C. IV. that we get the *Idea of Space*, both by our Sight and Touch; which, I think, is so evident, that it would be as needless to go to prove, that

Men

Men perceive, by their Sight, a Distance between Bodies of different Colours, or between the Parts of the same Body, as that they see Colours themselves; nor is it less obvious, that they can do so, in the dark, by Feeling and Touch.

Space and Extension. §. 3. THIS Space, considered barely in Length between any two Beings, without considering any thing else between them, is called *Distance*; if considered in Length, Breadth and Thickness, I think it may be called *Capacity*: The Term, Extension, is usually applied to it, in what manner soever considered.

§. 4. EACH different Distance, is a different Immensity. Modification of Space; and each Idea of *any different Distance, or Space, is a Simple Mode of this Idea*. Men, for the Use, and by the Custom of Measuring, settle in their Minds the Ideas of certain stated Lengths, such as are an *Inch, Foot, Yard, Fathom, Mile, Diameter of the Earth, &c.* which are so many distinct Ideas, made up only of Space. When any such stated Lengths, or Measures of Space, are made familiar to Mens Thoughts, they can, in their Minds, repeat them as often as they will, without mixing, or joining to them, the Idea of Body, or any thing else; and frame to themselves the Ideas of long, square, or cubic *Feet, Yards, or Fathoms*, here amongst the Bodies of the Universe, or else beyond the utmost Bounds of all Bodies; and by adding these still one to another, enlarge their Idea of Space, as much as they please. This Power of repeating, or doubling any Idea we have of any Distance, and adding it to the former, as often as we will, without being ever able to come to any Stop or Stint, let us enlarge it as much as we will, is that which gives us the Idea of *Imminity*.

Figure. §. 5. THERE is another Modification of this Idea, which is nothing but the Relation, which the Parts of the Termination of Extension, or circumscribed Space, have amongst themselves. This the Touch discovers in sensible Bodies, whose Extremities come within our Reach; and the Eye takes, both from Bodies and Colours, whose Boundaries are within its View: Where, observing how the Extremities terminate, either in strait Lines, which meet at discernible Angles;

or

or in crooked Lines, wherein no Angles can be perceived ; by considering these, as they relate to one another, in all Parts of the Extremities of any Body, or Space, it has that *Idea* we call *Figure*, which affords to the Mind infinite Variety. For, besides the vast Number of different Figures, that do really exist in the coherent Masses of Matter, the Stock that the Mind has in its Power, by varying the *Idea* of Space, and thereby making still new Compositions, by repeating its own *Ideas*, and joining them as it pleases, is perfectly inexhaustible ; and so it can multiply Figures *in infinitum*.

§. 6. FOR the Mind, having a Power to repeat the *Idea* of any Length, directly stretched out, and join it to another, in the same Direction, which is to double the Length of that strait Line, or else join it to another, with what Inclination it thinks fit, and so make what Sort of Angles it pleases ; and being able also to shorten any Line it imagines, by taking from it one half, or one fourth, or what Part it pleases, without being able to come to an End of any such Divisions, it can make an Angle of any Bigness ; so, also, the Lines that are its Sides, of what Length it pleases ; which joining again to other Lines of different Lengths, and at different Angles, till it has wholly inclosed any Space, it is evident, that it can multiply *Figures*, both in their Shape and Capacity, *in infinitum* ; all which are but so many different *simple Modes of Space*.

THE same that it can do with strait Lines, it can do also with crooked, or crooked and strait together ; and the same it can do in Lines, it can also in Superficies ; by which we may be led into farther Thoughts of the endless Variety of *Figures*, that the Mind has a Power to make, and thereby to multiply the *Simple Modes of Space*.

§. 7. ANOTHER *Idea*, coming under this Head, *Place*, and belonging to this Tribe, is that we call *Place*. As, in simple Space, we consider the relation of Distance between any two Bodies, or Points ; so, in our *Idea of Place*, we consider the relation of Distance betwixt any Thing, and any two, or more Points, which are consider'd as keeping the same Distance, one with another, and so considered as at rest : For, when

when we find any Thing at the same Distance now, which it was yesterday, from any two, or more Points, which have not since changed their Distance, one with another, and with which we then compared it, we say it hath kept the same *Place*; but if it hath sensibly alter'd its Distance with either of those Points, we say it hath changed its *Place*; tho', vulgarly speaking, in the common Notion of *Place*, we do not always exactly observe the Distance from precise Points; but from larger Portions of sensible Objects, to which we consider the Thing placed to bear relation, and its Distance from which we have some Reason to observe.

§. 8. Thus, a Company of Chess-men, standing on the same Squares of the Chess-board, where we left them, we say, they are all in the *same Place*, or unmoved; tho', perhaps, the Chess-board hath been, in the mean time, carried out of one Room into another; because we compared them only to the Parts of the Chess-board, which keep the same Distance one with another. The Chess-board, we also say, is in the *same Place* it was, if it remain in the same Part of the Cabin, tho', perhaps, the Ship, which it is in, sails all the while; and the Ship is said to be in the *same Place*, supposing it kept the same Distance with the Parts of the neighbouring Land; tho', perhaps, the Earth hath turned round; and so both Chess-men, and Board, and Ship, have every one *changed Place*, in respect of remoter Bodies, which have kept the same Distance one with another. But yet the Distance from certain Parts of the Board, being that which determines the Place of the Chess-men; and the Distance from the fixed Parts of the Cabin, (with which we made the Comparison) being that which determined the Place of the Chess-board; and the fixed Parts of the Earth, that by which we determined the Place of the Ship, these Things may be said properly to be in the *same Place*, in those respects; tho' their Distance from some other Things, which, in this Matter, we did not consider, being varied, they have, undoubtedly, *changed Place*, in that respect; and we ourselves shall think so, when we have occasion to compare them with those other.

§. 9. But this Modification of Distance, we call *Place*, being made by Men, for their common Use, that by it they might be able

able to design the particular Position of Things, where they had occasion for such Designation; Men consider and determine of this *Place*, by reference to those adjacent Things, which best served to their present Purpose, without considering other Things, which, to another Purpose, would better determine the *Place* of the same Thing. Thus, in the Chess-board, the Use of the *Designation of the Place* of each Chess-man, being determined only within that chequer'd Piece of Wood; it would cross that Purpose, to measure it by any Thing else: But, when these very Chess-men are put up in a Bag, if any one should ask where the black King is, it would be proper to determine the *Place*, by the Parts of the Room it was in, and not by the Chess-board; there being another Use of *designing the Place* it is now in, than when in Play it was on the Chess-board, and so must be determined by other Bodies. So, if any one should ask, in what Place are the Verses, which report the Story of *Nisus* and *Euryalus*, it would be very improper to determine this Place, by saying, they were in such a Part of the Earth, or in *Bodley's Library*; but the right Designation of the Place would be, by the Parts of *Virgil's Works*; and the proper Answer would be, that these Verses were about the middle of the Ninth Book of his *Aeneids*; and that they have been always constantly in the same Place, ever since *Virgil* was printed: Which is true, tho' the Book itself hath moved a thousand times; the Use of the *Idea of Place* here, being to know only in what Part of the Book that Story is, that so, upon Occasion, we may know where to find it, and have recourse to it, for our Use.

§. 10. THAT our *Idea of Place* is nothing else, but such a relative Position of any Thing, as I have before mentioned, I think is plain, and will be easily admitted, when we consider that we can have no *Idea of the Place of the Universe*, tho' we can of all the Parts of it; because beyond that we have not the *Idea of any fixed, distinct, particular Beings*, in reference to which we can imagine it to have any relation of distance; but all beyond it is one uniform Space, or Expansion, wherein the Mind finds no Variety, no Marks. For to say, that the World is somewhere, means no more than it does exist: This, tho'
a Phrase

a Phrase borrowed from Place, signifying only its Existence, not Location; and when one can find out, and frame in his Mind, clearly and distinctly, the Place of the Universe, he will be able to tell us, whether it moves, or stands still, in the undistinguishable *Inane* of infinite Space; tho' it be true, that the Word *Place* has, sometimes, a more confused Sense, and stands for that Space which any Body takes up; and so the Universe is in a Place. The *Idea*, therefore, of *Place*, we have by the same means that we get the *Idea* of Space (whereof this is but a particular, limited Consideration) *viz.* by our Sight and Touch; by either of which we receive into our Minds the *Ideas* of Extension, or Distance.

Extension and Body, not the us, that Body and Extension are the same thing; same. §. 11. THERE are some, that would persuade who either change the Signification of Words, which I would not suspect them of, they having so severely condemned the Philosophy of others, because it hath been too much placed in the uncertain Meaning, or deceitful Obscurity of doubtful, or insignificant Terms. If, therefore, they mean by *Body, and Extension, the same* that other People do, *viz.* by *Body*, something, that is solid and extended, whose Parts are separable and moveable different ways; and by Extension, only the Space that lies between the Extremities of those solid, coherent Parts, and which is possessed by them; they confound very different *Ideas* one with another: For I appeal to every Man's own Thoughts, whether the *Idea* of Space be not as distinct from that of Solidity, as it is from the *Idea* of Scarlet Colour? It is true, Solidity cannot exist without Extension, neither can Scarlet Colour exist without Extension; but this hinders not, but that they are distinct *Ideas*. Many *Ideas* require others, as necessary to their Existence, or Conception, which, yet, are very distinct *Ideas*. Motion can neither be, nor be conceived without Space; and yet Motion is not Space, nor Space Motion; Space can exist without it, and they are very distinct *Ideas*; and so, I think, are those of Space and Solidity. Solidity is so inseparable an *Idea* from Body, that upon that depends its filling of Space, its Contact, Impulse, and Communication of Motion upon

upon Impulse. And, if it be a Reason to prove, that Spirit is different from Body, because Thinking includes not the *Idea* of Extension in it ; the same Reason will be as valid, I suppose, to prove, that *Space is not Body*, because it includes not the *Idea* of Solidity in it : *Space* and *Solidity* being as *distinct Ideas*, as Thinking and Extension, and as wholly separable in the Mind one from another. *Body*, then, and *Extension*, it is evident, are two *distinct Ideas*. For,

§. 12. *First*, EXTENSION includes no Solidity, nor Resistance to the Motion of *Body*, as *Body* does.

§. 13. *Secondly*, THE Parts of pure Space are inseparable one from the other ; so that the Continuity cannot be separated, neither really, nor mentally. For I demand of any one, to remove any Part of it from another, with which it is continued, even so much as in Thought. To divide and separate actually, is, as I think, by removing the Parts one from another, to make two Superficies, where, before, there was a Continuity: And to divide mentally, is to make in the Mind two Superficies, where, before, there was a Continuity, and consider them as removed one from the other ; which can only be done, in Things considered by the Mind, as capable of being separated ; and, by Separation, of acquiring new distinct Superficies, which they then have not, but are capable of : But neither of these Ways of Separation, whether real, or mental, is, as I think, compatible to pure Space.

It is true, a Man may consider so much of such a *Space*, as is answerable, or commensurate, to a Foot, without considering the rest; which is, indeed, a partial Consideration, but not so much as a mental Separation, or Division ; since a Man can no more mentally divide, without considering two Superficies, separate one from the other, than he can actually divide, without making two Superficies, disjoined one from the other ; but a partial Consideration is not separating. A Man may consider Light in the Sun, without its Heat ; or Mobility in Body, without its Extension, without thinking of their Separation: One is only a partial Consideration, terminating in one alone; and the other is a Consideration of both, as existing separately.

§. 14. *Thirdly*, THE Parts of pure *Space* are immoveable, which follows from their Inseparability; *Motion* being nothing but change of distance betwē enany two Things: But this cannot be between Parts that are inseparable; which, therefore, must needs be at perpetual rest one amongst another.

THUS the determined *Idea* of simple *Space* distinguishes it plainly and sufficiently from *Body*, since its Parts are inseparable, immovable, and without Resistance to the Motion of *Body*.

The Definition of Extension, explains it not. §. 15. IF any one ask me, *What this Space I speak of, is?* I will tell him, when he tells me what his *Extension* is. For to say, as is

usually done, that *Extension* is to have *partes extra partes*, is to say only, that *Extension* is *Extension*: For what am I the better informed, in the Nature of *Extension*, when I am told, that *Extension* is to have *Parts that are extended, exterior to Parts that are extended*, i. e. *Extension* consists of extended *Parts*? As if one asking, what a Fibre was? I should answer him, that it was a Thing made up of several Fibres; would he hereby be enabled to understand what a Fibre was, better than he did before? Or, rather, would he not have reason to think, that my Design was to make Sport with him, rather than seriously to instruct him.

Division of Beings into Bodies and Spirits, proves not Space and Body the same.

§. 16. THOSE who contend that *Space and Body are the same*, bring this *Dilemma*; either this *Space* is something, or nothing; if nothing be between two *Bodies*, they must necessarily touch: If it be allowed to be something, they ask, whether it be *Body*, or *Spirit*? To which I answer, by another Question, Who told them, that there was, or could be nothing but solid *Beings*, which could not think, and thinking *Beings*, that were not extended? which is all they mean by the Terms, *Body* and *Spirit*.

Substance which we know not, no Proof against Space without Body.

§. 17. IF it be demanded (as usually it is) whether this *Space*, void of *Body*, be *Substance*, or *Accident*? I shall readily answer, I know not; nor shall be ashamed to own my Ignorance, till they that ask, shew me a clear, distinct *Idea of Substance*.

§. 18. I ENDEA-

§. 18. I ENDEAVOUR, as much as I can, to deliver myself from those Fallacies, which we are apt to put upon ourselves, by taking Words for Things. It helps not our Ignorance, to feign a Knowledge where we have none, by making a Noise, with Sounds, without clear and distinct Significations. Names, made at pleasure, neither alter the Nature of Things, nor make us understand them, but as they are Signs of, and stand for determined *Ideas*. And I desire those, who lay so much Stress on the Sound of these two Syllables, *Substance*, to consider, whether applying it, as they do, to the infinite, incomprehensible GOD, to finite Spirit, and to Body, it be in the same Sense? And whether it stands for the same *Idea*, when each of those three, so different Beings, are called *Substances*? If so, whether it will not thence follow, that God, Spirits, and Body, agreeing in the same common Nature of *Substance*, differ any otherwise, than in a bare different Modification of that *Substance*; as a Tree and a Pebble being, in the same Sense, Body, and agreeing in the common Nature of Body, differ only in a bare Modification of that common Matter? which will be a very harsh Doctrine. If they say, that they apply it to God, finite Spirits, and Matter, in three different Significations; and that it stands for one *Idea*, when GOD is said to be a *Substance*; for another, when the Soul is called *Substance*; and for a third, when a Body is called so: If the Name, *Substance*, stands for three several distinct *Ideas*, they would do well to make known those distinct *Ideas*, or, at least, to give three distinct Names to them, to prevent, in so important a Notion, the Confusion and Errors that will naturally follow, from the promiscuous Use of so doubtful a Term; which is so far from being suspected to have three distinct, that, in ordinary Use, it has scarce one clear, distinct Signification: And, if they can thus make three distinct *Ideas* of *Substance*, what hinders why another may not make a fourth?

§. 19. THEY who first ran into the Notion of *Accidents*, as a sort of real Beings, that needed something to inhere in, were forced to find out the Word *Substance*, to support them. Had the poor Indian Philosopher (who imagined that the Earth also wanted

*Substance and
Accidents, of
little Use in
Philosophy.*

ed

ed something to bear it up) but thought of this Word *Substance*, he needed not to have been at the Trouble to find an Elephant to support it, and a Tortoise to support his Elephant; the Word *Substance* would have done it effectually. And he, that enquired, might have taken it for as good an Answer from an *Indian* Philosopher, that *Substance*, without knowing what it is, is that which supports the Earth; as we take it for a sufficient Answer, and good Doctrine, from our *European* Philosophers, that *Substance*, without knowing what it is, is that which supports *Accidents*. So that of *Substance*, we have no *Idea* of what it is, but only a confused, obscure one of what it does.

§. 20. WHATEVER a learned Man may do here, an intelligent *American*, who enquired into the Nature of Things, would scarce take it for a satisfactory Account, if, desiring to learn our Architecture, he should be told, that a Pillar was a Thing supported by a *Basis*, and a *Basis* something that supported a Pillar; would he not think himself mocked, instead of taught, with such an Account as this? And a Stranger to them would be very liberally instructed in the Nature of Books, and the Things they contained, if he should be told, that all learned Books consisted of Paper and Letter, and that Letters were Things inhering in Paper, and Paper a Thing that held forth Letters; a notable Way of having clear *Ideas* of Letters and Paper! But were the *Latin* Words, *Inherantia* and *Substantia*, put into the plain *English* ones that answer them, and were called *sticking-on* and *under-propping*, they would better discover to us the very great Clearness there is in the Doctrine of *Substance* and *Accidents*, and shew of what Use they are in deciding of Questions in Philosophy.

A Vacuum beyond the utmost Bounds of Body.

§. 21. BUT to return to our *Idea* of Space. If Body be not supposed infinite, which, I think, no one will affirm, I would ask, Whether, if

GOD placed a Man at the Extremity of corporeal Beings, he could not stretch his Hand beyond his Body? If he could, then he would put his Arm, where there was before Space without Body; and if there he spread his Fingers, there would still be Space between them without Body: If he could

not

not stretch out his Hand, it must be because of some external Hindrance; (for we suppose him alive, with such a Power of moving the Parts of his Body that he hath now; which is not in itself impossible, if GOD so pleased to have it; or, at least, it is not impossible for GOD so to move him:) And then I ask, Whether that, which hinders his Hand from moving outwards, be Substance, or Accident? Something, or Nothing? And, when they have resolved that, they will be able to resolve themselves what that is, which is, or may be, between two Bodies at a Distance, that is not Body, and has no Solidity. In the mean time, the Argument is at least as good, That where nothing hinders, (as beyond the utmost Bounds of all Bodies) a *Body* put into Motion may move on; as where there is nothing between, there two Bodies must necessarily touch: For pure *Space* between, is sufficient to take away the Necessity of mutual Contact; but bare *Space*, in the Way, is not sufficient to stop Motion. The Truth is, these Men must either own, that they think Body infinite, tho' they are loth to speak it out, or else affirm, that *Space* is not *Body*. For I would fain meet with that thinking Man, that can, in his Thoughts, set any Bounds to Space, more than he can to Duration; or, by thinking, hope to arrive at the End of either: And, therefore, if his *Idea* of Eternity be infinite, so is his *Idea* of Immensity; they are both finite, or infinite alike.

§. 22. FARTHER, those, who assert the Impossibility of *Space*, existing without *Matter*, must not only make Body infinite, but must also deny a Power in God to annihilate any Part of Matter. No one, I suppose, will deny that GOD can put an End to all Motion that is in Matter, and fix all the Bodies of the Universe in a perfect Quict and Rest, and continue them so as long as he pleases. Whoever then will allow, that God can, during such a general Rest, annihilate either this Book, or the Body of him that reads it, must necessarily admit the Possibility of a *Vacuum*: For it is evident, that the *Space*, that was filled by the Parts of the annihilated Body, will still remain, and be a *Space* without Body. For the circumambient Bodies being in a perfect Rest, are a Wall of Adamant, and in that State make it a perfect Impossibility,

*The Power of
Annihilation
proves a Va-
cuum.*

bility, for any other Body to get into that Space. And, indeed, the necessary Motion of one Particle of Matter, into the Place from whence another Particle of Matter is removed, is but a Consequence from the Supposition of Plenitude, which will therefore need some better Proof than a supposed Matter of Fact, which Experiment can never make out; our own clear and distinct Ideas plainly satisfying us, that there is no necessary Connexion between *Space* and *Solidity*, since we can conceive the one without the other. And those who dispute for, or against a *Vacuum*, do thereby confess they have distinct Ideas of *Vacuum* and *Plenum*, i. e. that they have an Idea of Extension, void of Solidity, tho' they deny its Existence; or else they dispute about nothing at all. For they, who so much alter the Signification of Words, as to call *Extension Body*, and consequently make the whole Essence of Body to be nothing but pure Extension, without Solidity, must talk absurdly, whenever they speak of *Vacuum*, since it is impossible for Extension to be without Extension: For *Vacuum*, whether we affirm, or deny its Existence, signifies Space without Body; whose very Existence no one can deny to be possible, who will not make Matter infinite, and take from God a Power to annihilate any Particle of it.

Motion proves a Vacuum. §. 23. But not to go so far, as beyond the utmost Bounds of Body in the Universe, nor ap-

peal to God's Omnipotency, to find a *Vacuum*, the *Motion* of Bodies, that are in our View and Neighbourhood, seems to me plainly to evince it. For I desire any one so to divide a solid Body, of any Dimension he pleases, as to make it possible for the solid Parts, to move up and down freely every way, within the Bounds of that Superficies, if there be not left in it a void Space, as big as the least Part, into which he has divided the said solid Body. And if, where the least Particle of the Body divided, is as big as a Mustard-Seed, a void Space, equal to the Bulk of a Mustard-Seed, be requisite to make room for the free Motion of the Parts of the divided Body, within the Bounds of its Superficies, where the Particles of Matter are 100,000,000 times less than a Mustard-Seed, there must also be a Space void of solid Matter, as big as 100,000,000th Part of a Mustard-

Mustard-Seed: For if it hold in one, it will hold in the other, and so on *in infinitum*. And let this void Space be as little as it will, it destroys the Hypothesis of *Plenitude*. For, if there can be a Space void of Body, equal to the smallest separate Particle of Matter, now existing in Nature, 'tis still Space without Body, and makes as great a Difference between Space and Body, as if it were Μέγα χάσμα, a Distance as wide as any in Nature. And, therefore, if we suppose not the void Space necessary to Motion, equal to the least Parcel of the divided solid Matter, but to one tenth, or one thousandth, of it, the same Consequence will always follow, of Space without Matter.

§. 24. But the Question being here, Whether *The Ideas of Space and Body distinct.*
the Idea of Space, or Extension, be the same with the Idea of Body, it is not necessary to prove the real Existence of a *Vacuum*, but the *Idea* of it; which 'tis plain Men have, when they enquire and dispute, whether there be a *Vacuum*, or no? For, if they had not the *Idea* of Space without Body, they could not make a Question about its Existence: And, if their *Idea* of Body did not include in it something more than the bare *Idea* of Space, they could have no doubt about the Plenitude of the World; and 'twould be as absurd to demand, whether there were Space without Body, as whether there were Space without Space, or Body without Body, since these were but different Names of the same *Idea*.

§. 25. 'Tis true, the *Idea* of *Extension* joins itself so inseparably with all visible, and most tangible Qualities, that it suffers us to see no one, or feel very few external Objects, without taking in Impressions of Extension too. This Readiness of Extension, to make itself be taken Notice of, so constantly, with other *Ideas*, has been the Occasion, I guess, that some have made the whole Essence of *Body* to consist in Extension; which is not much to be wondered at, since some have had their Minds, by their Eyes and Touch, (the busiest of all our Senses) so filled with the *Idea* of Extension, and, as it were, wholly possessed with it, that they allowed no Existence to any Thing that had not Extension. I shall not now argue with

Extension being inseparable from Body, proves it not the same.

with those Men, who take the Measure and Possibility of all Being, only from their narrow and gross Imaginations: But having here to do only with those, who conclude the Essence of Body to be *Extension*, because, they say, they cannot imagine any sensible Quality of any Body without Extension; I shall desire them to consider, That had they reflected on their *Ideas* of Tastes and Smells, as much as on those of Sight and Touch; nay, had they examined the *Ideas* of Hunger and Thirst, and several other Pains, they would have found, that they included in them no *Idea* of Extension at all; which is but an Affection of Body, as well as the rest discoverable by our Senses, which are scarce acute enough to look into the pure Essences of Things.

§. 26. If those *Ideas*, which are constantly joined to all others, must therefore be concluded to be the Essence of those Things, which have constantly those *Ideas* joined to them, and are inseparable from them; then Unity is, without doubt, the Essence of every Thing. For there is not any Object of Sensation, or Reflexion, which does not carry with it the *Idea* of one: But the Weakness of this Kind of Argument we have already shewn sufficiently.

Ideas of Space and Solidity, distinct. §. 27. To conclude, whatever Men shall think, concerning the Existence of a *Vacuum*, this is plain to me, that we have as clear an *Idea of Space, distinct from Solidity*, as we have of Solidity, distinct from Motion, or Motion from Space. We have not any two more distinct *Ideas*, and we can as easily conceive Space, without Solidity, as we can conceive Body, or Space, without Motion, tho' it be never so certain, that neither Body, nor Motion, can exist without Space. But whether any one will take Space to be only a Relation, resulting from the Existence of other Beings at a Distance, or whether they will think the Words of the most knowing King Solomon, *The Heaven, and the Heaven of Heavens, cannot contain Thee*; or those more emphatical ones of the inspired Philosopher, St. Paul, *In Him we live, move, and have our Being*, are to be understood in a literal Sense, I leave every one to consider; only our *Idea of Space* is, I think, such as I have mentioned,

oned, and distinct from that of *Body*. For, whether we consider in Matter itself the Distance of its coherent, solid Parts, and call it, in respect of those solid Parts, *Extension*; or whether, considering it as lying between the Extremities of any Body, in its several Dimensions, we call it *Length*, *Breadth*, and *Thickness*; or else, considering it as lying between any two Bodies, or positive Beings, without any Consideration, whether there be any Matter or no between, we call it *Distance*. However named, or considered, it is always the same uniform, simple *Idea of Space*, taken from Objects, about which our Senſes have been converſant; whereof, having ſettled *Ideas* in our Minds, we can revive, repeat, and add them one to another, as often as we will, and conſider the Space, or Distance ſo imagined, either as filled with ſolid Parts, ſo that another Body cannot come there, without displacing and thrusting out the Body that was there before; or else, as void of Solidity, ſo that a Body of equal Dimensions to that empty, or pure Space, may be placed in it, without the Removing, or Expulſion of any Thing that was there. But, to avoid Confuſion in Discourses concerning this Matter, it were poſſible to be wifhed, that the Name, *Extension*, were applied only to Matter, or the Distance of the Extremities of particular Bodies, and the Term, *Expansion*, to Space in general, with, or without ſolid Matter poſſeſſing it, ſo as to ſay, *Space is expanded*, and *Body extended*. But, in this, every one has his Liberty; I propoſe it only for the more clear and diſtinct Way of Speaking.

§. 28. THE knowing precisely what our Words stand for, would, I imagine, in this, as well as a great many other Cafes, quickly end the Dispute. For I am apt to think, that Men, when they come to examine them, find their ſimple *Ideas* all generally to agree, tho', in Discourse with one another, they perhaps confound one another with different Names. I imagine that Men, who abstract their Thoughts, and do well examine the *Ideas* of their own Minds, *cannot much differ in Thinking*; however they may perplex themselves with Words, according to the Way of Speaking of the ſeveral Schools, or Sefts, they have been bred up in;

Men differ little in clear, simple Ideas.

tho', amongst unthinking Men, who examine not scrupulously and carefully their own *Ideas*, and strip them not from the Marks Men use for them, but confound them with Words, there must be endless Dispute, Wrangling, and Jargon; especially if they be learned, bookish Men, devoted to some Sect, and accustomed to the Language of it, and have learned to talk after others. But, if it should happen, that any two thinking Men, should really have different *Ideas*, I do not see how they could discourse, or argue one with another. Here I must not be mistaken, to think that every floating Imagination in Mens Brains, is presently of that Sort of *Ideas* I speak of. 'Tis not easy for the Mind to put off those confused Notions and Prejudices it has imbibed from Custom, Inadvertency, and common Conversation: It requires Pains and Affiduity to examine its *Ideas*, 'till it resolves them into those clear and distinct simple ones, out of which they are compounded; and to see which, amongst its simple ones, have, or have not, a necessary Connexion and Dependence one upon another. 'Till a Man doth this, in the primary and original Notions of Things, he builds upon floating and uncertain Principles, and will often find himself at a Loss.

C H A P. XIV.

Of Duration, and its simple Modes.

*Duration is
 fleeting Exten-
 sion.*

§. 1. **T**HERE is another Sort of Distance, or Length, the *Idea* whereof we

get, not from the permanent Parts of Space, but from the fleeting and perpetually perishing Parts of Succession. This we call *Duration*, the simple Modes whereof are any different Lengths of it, whereof we have distinct *Ideas*; as *Hours, Days, Years, &c. Time and Eternity*.

*Its Idea from
Reflexion on
the Train of our
Ideas.*

§. 2. THE Answer of a great Man, to one who asked what Time was, *Si non rogas intelligo*, (which amounts to this; the more I set myself to think of it, the less I understand it) might, perhaps,

perhaps, persuade one, that *Time*, which reveals all other Things, is itself not to be discovered. *Duration*, *Time*, and *Eternity*, are, not without Reason, thought to have something very abstruse in their Nature. But, however remote these may seem from our Comprehension, yet, if we trace them right to their Originals, I doubt not but one of those Sources of all our Knowledge, *viz.* *Sensation*, and *Reflexion*, will be able to furnish us with these *Ideas*, as clear and distinct as many other, which are thought much less obscure; and we shall find, that the *Idea* of *Eternity* itself is derived from the same common Original with the rest of our *Ideas*.

§. 3. To understand *Time* and *Eternity* aright, we ought, with Attention, to consider what *Idea* it is we have of *Duration*, and how we came by it. 'Tis evident to any one, who will but observe what passes in his own Mind, that there is a Train of *Ideas* which constantly succeed one another in his Understanding, as long as he is awake. *Reflexion* on these Appearances of several *Ideas*, one after another, in our Minds, is that which furnishes us with the *Idea* of *Succession*; and the Distance between any Parts of that Succession, or between the Appearance of any two *Ideas* in our Minds, is that we call *Duration*. For, whilst we are thinking, or whilst we receive successively several *Ideas* in our Minds, we know that we do exist; and so we call the Existence, or the Continuation of the Existence of ourselves, or any Thing else, commensurate to the Succession of any *Ideas* in our Minds, the *Duration* of ourselves, or any such other Thing co-existing with our Thinking.

§. 4. THAT we have our Notion of *Succession* and *Duration*, from this Original, *viz.* from Reflexion on the Train of *Ideas*, which we find to appear one after another in our own Minds, seems plain to me, in that we have no Perception of *Duration*, but by considering the Train of *Ideas*, that take their Turns in our Understandings. When that Succession of *Ideas* ceases, our Perception of *Duration* ceases with it; which every one clearly experiments in himself, whilst he sleeps soundly, whether an Hour, or a Day, a Month, or a Year; of which Duration of Things, whilst he sleeps, or thinks not, he has no Perception at all,

all, but it is quite lost to him ; and the Moment, wherein he leaves off to think, 'till the Moment he begins to think again, seems to him to have no Distance. And so I doubt not but it would be to a waking Man, if it were possible for him to keep only one *Idea* in his Mind, without Variation, and the Succession of others: And we see, that one who fixes his Thoughts very intently on one Thing, so as to take but little Notice of the Succession of *Ideas* that passes in his Mind, whilst he is taken up with that earnest Contemplation, lets slip out of his Account a good Part of that Duration, and thinks that Time shorter than it is. But, if Sleep commonly unites the distant Parts of Duration, it is because, during that Time, we have no Succession of *Ideas* in our Minds. For if a Man, during his Sleep, dreams, and Variety of *Ideas* make themselves perceptible in his Mind one after another; he hath then, during such a Dreaming, a Sense of *Duration*, and of the Length of it : By which it is to me very clear, that Men derive their *Ideas* of Duration from their *Reflexion on the Train of the Ideas*, they observe to succeed one another in their own Understandings; without which Observation they can have no Notion of *Duration*, whatever may happen in the World.

The Idea of Duration, applicable to Things whilst we sleep. §. 5. INDEED a Man having, from reflecting on the Succession and Number of his own Thoughts, got the Notion, or *Idea*, of *Duration*, he can apply that Notion to Things, which exist while he does not think ; as he that has got the *Idea* of Extension from Bodies, by his Sight, or Touch, can apply it to Instances, where no Body is seen, or felt. And, therefore, tho' a Man has no Perception of the Length of Duration, which passed whilst he slept, or thought not ; yet, having observed the Revolution of Days and Nights, and found the Length of their Duration to be in Appearance regular and constant, he can, upon the Supposition, that That Revolution has proceeded after the same Manner, whilst he was asleep, or thought not, as it used to do at other Times ; he can, I say, imagine, and make Allowance for, the Length of *Duration*, whilst he slept. But, if *Adam* and *Eve*, (when they were alone in the World) instead of their ordinary

ordinary Night's Sleep, had passed the whole twenty-four Hours in one continued Sleep, the Duration of that twenty-four Hours had been irrecoverably lost to them, and been for ever left out of their Account of Time.

§. 6. *Thus, by reflecting on the appearing of various Ideas, one after another, in our Under-Standings, we get the Notion of Succession;* which,

The Idea of Succession not from Motion.

if any one should think we did rather get from our Observation of Motion by our Senses, he will, perhaps, be of my Mind, when he considers, that even Motion produces in his Mind an *Idea of Succession*, no otherways than as it produces there a continued Train of distinguishable *Ideas*. For a Man looking upon a Body really moving, perceives, yet, no Motion at all, unless that Motion produces a constant Train of successive Ideas; *v. g.* a Man becalmed at Sea, out of Sight of Land, in a fair Day, may look on the Sun, or Sea, or Ship, a whole Hour together, and perceive no Motion at all in either; tho' it be certain, that two, and perhaps all of them have moved, during that Time, a great Way: But, as soon as he perceives either of them to have changed Distance with some other Body, as soon as this Motion produces any new *Idea* in him, then he perceives that there has been Motion. But, where-ever a Man is, with all Things at rest about him, without perceiving any Motion at all; if, during this Hour of Quiet, he has been thinking, he will perceive the various *Ideas* of his own Thoughts in his own Mind, appearing one after another, and thereby observe and find Succession, where he could observe no Motion,

§. 7. AND this, I think, is the Reason, *why Motions, very slow, tho' they are constant, are not perceived* by us; because, in their Remove from one sensible Part towards another, their Change of Distance is so slow, that it causes no new *Ideas* in us, but a good while one after another; and so, not causing a constant Train of new *Ideas*, to follow one another immediately in our Minds, we have no Perception of Motion; which, consisting in a constant Succession, we cannot perceive that Succession, without a constant Succession of varying *Ideas* arising from it.

§. 8. ON the contrary, *Things that move so swift, as not to affect the Senses distinctly, with several distinguishable Distances of*

of their Motion, and so cause not any Train of *Ideas* in the Mind, *are not also perceived* to move : For any thing, that moves round about in a Circle, in less Time than our *Ideas* are wont to succeed one another in our Minds, is not perceived to move ; but seems to be a perfect, entire Circle of that Matter or Colour, and not a Part of a Circle in Motion.

The Train of Ideas has a certain Degree of Quickness. §. 9. HENCE I leave it to others to judge, whether it be not probable, that our *Ideas* do, whilst we are awake, succeed one another, in our Minds, at certain Distances, not much unlike the Images in the Inside of a Lanthorn, turned round by the Heat of a Candle. This Appearance of theirs in Train, tho', perhaps, it may be sometimes faster, and sometimes slower, yet, I guess, varies not very much in a waking Man. There seem to be *certain Bounds to the Quickness, and Slowness, of the Succession* of those *Ideas* one to another in our Minds, beyond which they can neither delay, nor hasten.

§. 10. THE Reason I have for this odd Conjecture, is, from observing that in the Impressions made upon any of our Senses, we can but to a certain Degree perceive any Succession ; which, if exceeding quick, the Sense of Succession is lost, even in Cases where it is evident, that there is a real Succession. Let a Cannon Bullet pass thro' a Room, and in its Way take with it any Limb, or fleshy Parts of a Man ; 'tis as clear as any Demonstration can be, that it must strike successively the two Sides of the Room : 'Tis also evident, that it must touch one Part of the Flesh first, and another after, and so in Succession : And yet, I believe nobody, who ever felt the Pain of such a Shot, or heard the Blow against the two distant Walls, could perceive any Succession, either in the Pain, or Sound, of so swift a Stroke. Such a Part of Duration, as this, wherein we perceive no Succession, is that which we may call an *Instant* ; and is *that which takes up the Time of only one Idea* in our Minds, without the Succession of another, wherein, therefore, we perceive no Succession at all.

§. 11. THIS also happens, *where the Motion is so slow*, as not to supply a constant Train of fresh *Ideas* to the Senses, as fast as the Mind is capable of receiving new ones into it ; and so other

Ideas

Ideas of our own Thoughts, having room to come into our Minds, between those offer'd to our Senfes, by the moving Body, *there the Sense of Motion is lost*; and the Body, tho' it really moves, yet not changing perceptible Distance with some other Bodies, as fast as the *Ideas* of our own Minds do naturally follow one another in Train, the Thing seems to stand still, as is evident in the Hands of Clocks, and Shadows of Sun-dials, and other constant, but slow Motions; where, tho' after certain Intervals, we perceive by the Change of Distance, that it hath mov-ed, yet the Motion it self we perceive not.

§. 12. So that to me it seems, that *the constant and regular Succession of Ideas* in a waking Man, *This Train, the Measure of other Successions.* is, as it were, *the Measure and Standard of all other Successions*; whereof, if any one either exceeds the Pace of our *Ideas*, as where two Sounds, or Pains, &c. take up in their Succession the Duration of but one *Idea*; or else where any Motion, or Succession, is so slow, as that it keeps not pace with the *Ideas* in our Minds, or the Quickness in which they take their Turns; as when any one, or more *Ideas*, in their ordinary Course, come into our Mind, between those which are offered to the Sight, by the different perceptible Distances of a Body in Motion, or between Sounds, or Smells, following one another, there also the Sense of a constant continued Succession is lost, and we perceive it not, but with certain Gaps of Rest between.

§. 13. If it be so, that the *Ideas* of our Minds, whilst we have any there, do constantly change and shift, in a continual Succession, it would be impossible, may any one say, for a Man to think long of any one Thing: By which if it be meant, that a Man may *have one self-same single Idea a long time alone in his Mind, without any Variation at all*, I think, in Matter of Fact, it is *not possible*: For which (not knowing how the *Ideas* of our Minds are framed, of what Materials they are made, whence they have their Light, and how they come to make their Appearances) I can give no other Reason but Experience; and I would have any one try, whether he can keep one, unvaried, single *Idea* in his Mind, without any other, for any considerable Time together.

The Mind cannot fix long on one invariable Idea.

§. 14. FOR Trial, let him take any Figure, any Degree of Light, or Whiteness, or what other he pleases; and he will, I suppose, find it difficult to keep all other *Ideas* out of his Mind, but that some, either of another Kind, or various Consideration of that *Idea* (each of which Considerations is a new *Idea*) will constantly succeed one another in his Thoughts, let him be as wary as he can.

§. 15. ALL that is in a Man's Power in this Case, I think, is only to mind and observe what the *Ideas* are that take their Turns in his Understanding; or else to direct the Sort, and call in such as he hath a desire or use of; but hinder the *Constant Succession* of fresh ones, I think he cannot, tho' he may commonly chuse whether he will heedfully observe and consider them.

§. 16. WHETHER these several *Ideas* in a Man's Ideas, however made, include here dispute; but this I am sure, that they in no Sense of Motion. include no *Idea* of Motion, in their Appearance;

and, if a Man had not the *Idea* of Motion otherwise, I think he would have none at all; which is enough to my present Purpose, and sufficiently shews, that the Notice we take of the *Ideas* of our Minds, appearing there one after another, is that, which gives us the *Idea* of Succession, and Duration, without which we should have no such *Ideas* at all. It is not then *Motion*, but the constant Train of *Ideas* in our Minds, whilst we are waking, that furnishes us with the *Idea* of Duration; whereof Motion no otherwise gives us any Perception, than as it causes in our Minds a constant Succession of *Ideas*, as I have before shew'd; and we have as clear an *Idea* of Succession and Duration, by the Train of other *Ideas*, succeeding one another in our Minds, without the *Idea* of any Motion, as by the Train of *Ideas*, caused by the uninterrupted, sensible Change of Distance between two Bodies, which we have from Motion; and therefore we should as well have the *Idea* of Duration, were there no Sense of Motion at all.

Time is Duration set out by Measure. §. 17. HAVING thus got the *Idea* of Duration, the next thing natural for the Mind to do, is to get some *Measure* of this common Duration, whereby

whereby it might judge of its different Lengths, and consider the distinct Order, wherein several Things exist, without which a great Part of our Knowledge would be confused, and a great Part of History be rendered very useless. This Consideration of Duration, as set out by certain Periods, and marked by certain Measures, or *Epochs*, is that, I think, which, most properly, we call *Time*.

§. 18. IN the measuring of Extension, there is nothing more requir'd but the Application of the Standard, or Measure, we make use of, to the Thing of whose Extension we would be informed; but, in the measuring of Duration, this cannot be done; because no two different Parts of

*A good Mea-
sure of Time
must divide its
whole Dura-
tion into equal
Periods.*

Succession can be put together to measure one another; and nothing being a *Measure of Duration*, but Duration, as nothing is of Extension, but Extension, we cannot keep by us any standing, unvarying Measure of Duration, which consists in a constant fleeting Succession, as we can of certain Lengths of Extension, as Inches, Feet, Yards, &c. marked out in permanent Parcels of Matter. Nothing then could serve well for a convenient Measure of Time, but what has divided the whole Length of its Duration into apparently equal Portions, by constantly repeated Periods. What Portions of Duration are not distinguished, or considered as distinguished and measured by such Periods, come not so properly under the Notion of Time, as appears by such Phrases as these, *viz. Before all Time, and When Time shall be no more.*

§. 19. THE diurnal and annual *Revolutions of the Sun*, as having been, from the beginning of Nature constant, regular, and universally observable by all Mankind, and supposed equal to one another, have been, with reason, made use of for the *Measure of Duration*. But the Distinction of Days and Years having depended on the Motion of the Sun, it has brought this Mistake with it, that it has been thought that Motion and Duration were the Measure one of another: For Men, in the *measuring of the Length of Time*, having been accus-
tom'd to the Ideas of Minutes, Hours, Days, Months, Years, &c.

*The Revolu-
tions of the Sun
and Moon, the
properst Mea-
sures of Time.*

which they found themselves, upon any mention of Time, or Duration, presently to think on, all which Portions of Time were measured out, by the Motion of those heavenly Bodies, they were apt to confound Time and Motion; or, at least, to think that they had a necessary Connexion one with another; whereas any constant, periodical Appearance, or Alteration of Ideas, in seemingly equidistant Spaces of Duration, if constant and universally observable, would have as well distinguished the Intervals of Time, as those that have been made use of. For, supposing the Sun, which some have taken to be a Fire, had been lighted up at the same Distance of Time, that it now every Day comes about to the same Meridian, and then gone out again about twelve Hours after, and that in the Space of an annual Revolution, it had sensibly increased in Brightness and Heat, and so decreased again; would not such regular Appearances serve to measure out the Distances of Duration to all that could observe it, as well without as with Motion? For, if the Appearances were constant, universally observable, and in equidistant Periods, they would serve Mankind for Measure of Time as well, were the Motion away.

But not by their Motion, but Periodical Appearances. §. 20. For the freezing of Water, or the blowing of a Plant, returning at equidistant Periods in all Parts of the Earth, would as well serve Men to reckon their Years by, as the

Motions of the Sun; and, in effect, we see, that some People in America counted their Years by the coming of certain Birds amongst them, at their certain Seasons, and leaving them at others. For a Fit of an Ague, the Sense of Hunger, or Thirst, a Smell, or a Taste, or any other Idea, returning constantly at equidistant Periods, and making itself universally be taken notice of, would not fail to measure out the Course of Succession, and distinguish the Distances of Time. Thus we see that Men born blind count Time well enough by Years, whose Revolutions yet they cannot distinguish by Motions, that they perceive not: And, I ask, whether a blind Man, who distinguished his Years either by the Heat of Summer, or Cold of Winter, by the Smell of any Flower of the Spring, or Taste of any Fruit of the Autumn, would not have a better Measure of Time than

the

the *Romans* had, before the Reformation of their *Calendar* by *Julius Cesar*, or many other People, whose Years, notwithstanding the Motion of the Sun, which they pretend to make use of, are very irregular? And it adds no small Difficulty to Chronology, that the exact Length of the Years that several Nations counted by, are hard to be known, they differing very much one from another; and, I think, I may say, all of them from the precise Motion of the Sun. And, if the Sun moved from the Creation to the Flood, constantly in the *Aequator*, and so equally dispersed its Light and Heat to all the habitable Parts of the Earth, in Days all of the same Length, without its annual Variations to the Tropics, as a late, ingenious Author supposes *; I do not think it very easy to imagine, that (notwithstanding the Motion of the Sun) Men should, in the *Antediluvian* World, from the Beginning, count by Years, or measure their Time by Periods, that had no sensible Marks, very obvious to distinguish them by.

§. 21. But, perhaps, it will be said, without a regular Motion, such as of the Sun, or some other, how could it ever be known that such Periods were equal? To which I answer, the Equality of any other returning Appearances might be known by the same Way that that of Days was known, or presumed to be so at first; which was only by judging of them by the Train of Ideas, which had passed in Mens Minds in the Intervals: By which Train of Ideas discovering Inequality in the natural Days, but none in the artificial Days, the artificial Days, or Νυχθημερα were guessed to be equal, which was sufficient to make them serve for a Measure. Tho' exacter Search has since discovered Inequality, in the diurnal Revolutions of the Sun, and we know not whether the annual also be not unequal; these, yet, by their presumed and apparent Equality, serve as well to reckon Time by (tho' not to measure the Parts of Duration exactly) as if they could be proved to be exactly equal. We must, therefore, carefully distinguish betwixt Duration itself, and the Measures we make use of to judge of its Length.

No two Parts
of Duration
can be certain-
ly known to be
Equal.

Duration

* Dr. *Burnet's* Theory of the Earth.

Duration in itself is to be considered as going on in one constant, equal, uniform Course ; but none of the Measures of it, which we make use of, can be known to do so ; nor can we be assured, that their assigned Parts, or Periods, are equal in Duration one to another ; for two successive Lengths of Duration, however measured, can never be demonstrated to be equal. The Motion of the Sun, which the World used so long, and so confidently, for an exact Measure of Duration, has, as I said, been found in its several Parts unequal : And tho' Men have of late have made use of a Pendulum, as a more steady and regular Motion than that of the Sun, or (to speak more truly) of the Earth ; yet, if any one should be asked how he certainly knows that the two successive Swings of a Pendulum are equal, it would be very hard to satisfy himself that they are infallibly so; since we cannot be sure, that the Cause of that Motion, which is unknown to us, shall always operate equally ; and we are sure that the Medium, in which the Pendulum moves, is not constantly the same ; either of which varying, may alter the Equality of such Periods, and thereby destroy the Certainty and Exactness of the Measure by Motion, as well as any other Periods of other Appearances ; the Notion of Duration still remaining clear, tho' our Measures of it cannot any of them be demonstrated to be exact. Since, then, no two Portions of Succession can be brought together, it is impossible ever certainly to know their Equality. All that we can do for a Measure of Time, is to take such as have continual successive Appearances at seemingly equidistant Periods ; *of which seeming Equality we have no other Measure, but such as the Train of our own Ideas have lodg'd in our Memories, with the Concurrence of other probable Reasons, to persuade us of their Equality.*

Time not the Measure of Motion. §. 22. ONE Thing seems strange to me, that, whilst all Men manifestly measured Time by Motion, the Motion of the great and visible Bodies of the World, *Time* yet should be *defined* to be the *Measure of Motion*; whereas it is obvious to every one, who reflects ever so little on it, that to measure Motion, Space is as necessary to be considered as Time ; and those, who look a little farther, will

will find also the Bulk of the Thing moved, necessary to be taken into the Computation, by any one who will estimate, or measure Motion, so as to judge right of it. Nor indeed does Motion any otherwise conduce to the measuring of Duration, than as it constantly brings about the Return of certain sensible Ideas, in seeming equidistant Periods. For, if the Motion of the Sun were as unequal as of a Ship driven by unsteady Winds, sometimes very slow, and at others irregularly very swift ; or, if being constantly equally swift, it yet was not circular, and produced not the same Appearances, it would not at all help us to measure Time, any more than the seeming unequal Motion of a Comet does.

§. 23. MINUTES, Hours, Days, and Years, are then no more necessary to Time, or Duration, than Inches, Feet, Yards, and Miles, mark'd out in any Matter, are to Extension. For tho' we, in this Part of the Universe, by the constant Use

Minutes,
Hours, Days,
and Years, not
necessary Mea-
sures of Dura-
tion.

of them, as of Periods, set out by the Revolutions of the Sun, or as known Parts of such Periods, have fixed the Ideas of such Lengths of Duration in our Minds, which we apply to all Parts of Time, whose Lengths we would consider ; yet there may be other Parts of the Universe, where they no more use these Measures of ours, than in Japan they do our Inches, Feet, or Miles : But yet something analogous to them there must be ; for, without some regular periodical Returns we could not measure ourselves, or signify to others the Length of any Duration, tho', at the same time, the World were as full of Motion as it is now, but no Part of it disposed into regular and apparently equidistant Revolutions. But the different Measures, that may be made use of for the Account of Time, do not at all alter the Notion of Duration, which is the Thing to be measured ; no more than the different Standards of a Foot and a Cubit, alter the Notion of Extension to those, who make use of those different Measures.

§. 25. THE Mind, having once got such a Measure of Time, as the annual Revolution of

Our Measure
of Time, appli-
cable to Dura-

the

tion, before the Sun, can apply that Measure to Duration, Time. wherein that Measure itself did not exist, and with which, in the reality of its Being, it had nothing to do: For should one say, that *Abraham* was born in the 2712th Year of the Julian Period, it is altogether as intelligible, as reckoning from the Beginning of the World, tho' there were so far back no Motion of the Sun, nor any other Motion at all. For, tho' the Julian Period be supposed to begin several Hundred Years before there were really either Days, Nights, or Years, mark'd out by any Revolutions of the Sun; yet we reckon as right, and thereby measure Duration as well, as if really at that time the Sun had existed, and kept the same ordinary Motion it doth now. The *Idea of Duration, equal to an annual Revolution of the Sun,* is as easily applicable in our Thoughts to Duration, where no Sun, nor Motion was, as the *Idea of a Foot, or Yard, taken from Bodies,* here, can be applied in our Thoughts to Distances, beyond the Confines of the World, where are no Bodies at all.

§. 26. For, supposing it were 5639 Miles, or Millions of Miles, from this Place to the remotest Body of the Universe, (for, being finite, it must be at a certain Distance) as we suppose it to be 5639 Years from this Time, to the first Existence of any Body in the Beginning of the World; we can, in our Thoughts, apply this Measure of a Year, to Duration before the Creation, or beyond the Duration of Bodies, or Motion, as we can this Measure of a Mile to Space, beyond the utmost Bodies: And by the one measure Duration, where there was no Motion, as well as by the other measure Space in our Thoughts, where there is no Body.

§. 27. If it be objected to me here, that in this way of explaining of Time, I have begg'd what I should not, viz. that the World is neither eternal, nor infinite; I answer, that to my present Purpose it is not needful, in this Place, to make use of Arguments, to evince the World to be finite, both in Duration and Extension; but, it being at least as conceivable as the contrary, I have certainly the Liberty to suppose it, as well as any one hath to suppose the contrary: And I doubt not but that every one, that will go about it, may easily conceive in his Mind the

Beginning

Beginning of Motion, tho' not of all Duration; and so may come to a Stop, and *non ultra*, in his Consideration of Motion; so also in his Thoughts, he may set Limits to Body, and the Extension belonging to it, but not to Space, where no Body is; the utmost Bounds of Space and Duration being beyond the Reach of Thought, as well as the utmost Bounds of Number are beyond the largest Comprehension of the Mind; and all for the same Reason, as we shall see in another Place.

§. 28. By the same Means, therefore, and *Eternity*: from the same Original that we come to have *the Idea of Time*, we have also that *Idea*, which we call *Eternity*, viz. having got the *Idea* of Succession and Duration, by reflecting on the Train of our own *Ideas*, caused in us, either by the natural Appearances of those *Ideas* coming constantly of themselves into our waking Thoughts, or else caused by external Objects, successively affecting our Senses; and, having, from the Revolutions of the Sun, got the *Ideas* of certain Lengths of Duration, we can, in our Thoughts, add such Lengths of Duration to one another, as often as we please, and apply them, so added, to Durations past, or to come; and this we can continue to do on, without Bounds, or Limits, and proceed *in infinitum*, and apply thus the Length of the annual Notion of the Sun to Duration, supposed before the Sun's, or any other Motion had its Being; which is no more difficult, or absurd, than to apply the Notion I have, of the moving of a Shadow, one Hour To-day upon the Sun-dial, to the Duration of something last Night; v. g. the burning of a Candle, which is now absolutely separate from all actual Motion, and it is as impossible for the Duration of that Flame, for an Hour last Night, to co-exist with any Motion that now is, or ever shall be, as for any Part of Duration, that was before the beginning of the World, to co-exist with the Motion of the Sun now: But yet this hinders not; but that having the *Idea* of the Length of the Motion of the Shadow on a Dial, between the Marks of two Hours, I can as distinctly measure in my Thoughts the Duration of that Candle-light, last Night, as I can the Duration of any thing that does now exist; and it is no more than to think, that had the Sun shone then on the Dial, and moved

moved after the same rate it doth now, the Shadow on the Dial would have passed from one Hour-line to another, whilst that Flame of the Candle lasted.

§. 29. THE Notion of an Hour, Day, or Year, being only the *Idea* I have of the Length of certain periodical, regular Motions, neither of which Motions do ever all at once exist, but only in the *Ideas* I have of them in my Memory, derived from my Senses, or Reflexion, I can, with the same Ease, and for the same Reason, apply it in my Thoughts to Duration, antecedent to all manner of Motion, as well as to any thing that is but a Minute, or a Day, antecedent to the Motion, that at this very Moment the Sun is in. All Things past are equally and perfectly at rest; and to this Way of Consideration of them are all one, whether they were before the beginning of the World, or but Yesterday: *The measuring of any Duration, by some Motion, depending not at all on the real Co-existence of that Thing to that Motion, or any other Periods of Revolution;* but the having *a clear Idea of the Length of some periodical, known Motion, or other Intervals of Duration, in my Mind,* and *applying that to the Duration of the Thing I would measure.*

§. 30. HENCE we see, that some Men imagine the Duration of the World, from its first Existence to this present Year 1689, to have been 5639 Years, or equal to 5639 annual Revolutions of the Sun; and others a great deal more; as the *Egyptians* of old, who, in the Time of *Alexander*, counted 23,000 Years from the Reign of the Sun; and the *Chineſes* now, who account the World 3,269,000 Years old, or more: Which longer Duration of the World, according to their Computation, tho' I should not believe to be true; yet I can equally imagine it with them, and as truly understand, and say one is longer than another, as I understand that *Methusalem's* Life was longer than *Enoch's*. And, if the common reckoning of 5639 should be true, (as it may be, as well as any other assigned) it hinders not at all my imagining what others mean, when they make the World 1000 Years older, since every one may, with the same Facility, imagine (I do not say believe) the World to be 50,000 Years old, as 5639; and may as well conceive the Duration of 50,000 Years, as 5639.

Whereby

Whereby it appears, that to the measuring the Duration of any Thing by Time, it is not requisite that that Thing should be co-existent to the Motion, we measure by, or any other periodical Revolution; but it suffices to this Purpose, that we have the Idea of the Length of any regular, periodical Appearances, which we can, in our Minds, apply to Duration, with which the Motion, or Appearance never co-existed.

§. 31. For, as in the History of the Creation delivered by Moses, I can imagine that Light existed three Days, before the Sun was, or had any Motion, barely by thinking, that the Duration of Light, before the Sun was created, was so long as (if the Sun had moved then, as it doth now) would have been equal to three of his diurnal Revolutions; so by the same Way I can have an Idea of the Chaos, or Angels, being created, before there was either Light, or any continued Motion, a Minute, an Hour, a Day, a Year, or 1000 Years. For, if I can but consider Duration equal to one Minute, before either the Being, or Motion of any Body, I can add one Minute more, till I come to 60: And by the same Way of adding Minutes, Hours, or Years, (i.e. such, or such Parts of the Sun's Revolution, or any other Period, whereof I have the Idea) proceed *in infinitum*, and suppose a Duration, exceeding as many such Periods as I can reckon, let me add whilst I will; which I think is the Notion we have of Eternity, of whose Infinity we have no other Notion, than we have of the Infinity of Number, to which we can add for ever without End.

§. 32. AND thus I think it is plain, that from those two Fountains of all Knowledge before mentioned, (viz.) *Reflexion and Sensation*, we get the Ideas of Duration, and the Measures of it.

FOR, First, by observing what passes in our Minds, how our Ideas there in Train constantly, some vanish, and others begin to appear, we come by the Idea of Succession.

Secondly, By observing a Distance in the Parts of this Succession, we get the Idea of Duration.

Thirdly, By Sensation observing certain Appearances, at certain regular and seeming equidistant Periods, we get the Ideas of

174 *Duration and Expansion, consider'd together.*

certain Lengths, or *Measures of Duration*, as Minutes, Hours, Days, Years, &c.

Fourthly, By being able to repeat those Measures of Time, or Ideas of stated Length of Duration in our Minds, as often as we will, we can come to *imagine Duration, where nothing does really endure, or exist*; and thus we imagine To-morrow, next Year, or seven Years hence.

Fifthly, By being able to repeat any such Idea of any Length of Time, as of a Minute, a Year, or an Age, as often as we will in our own Thoughts, and adding them to one another, without ever coming to the End of such Addition, any nearer than we can to the End of Number, to which we can always add, we come by the *Idea of Eternity*, as the future, eternal Duration of our Souls, as well as the Eternity of that infinite Being, which must necessarily have always existed.

Sixthly, By considering any Part of infinite Duration, as set out by periodical Measures, we come by the *Idea* of what we call *Time* in general.

C H A P. XV.

Of Duration and Expansion, consider'd together.

*Both capable
of greater and
less.*

§. I.

TH O' we have, in the precedent Chapters, dwelt pretty long on the Considerations of Space and Duration; yet, they being Ideas of general Concernment, that have something very abstruse and peculiar in their Nature, the comparing them one with another, may, perhaps, be of Use for their Illustration; and we may have the more clear and distinct Conception of them, by taking a View of them together. Distance, or Space, in its simple, abstract Conception, to avoid Confusion, I call *Expansion*, to distinguish it from *Extension*, which by some is used to express this Distance only, as it is in the solid Parts of Matter, and so includes, or at least intimates the *Idea* of Body: Whereas the *Idea* of pure Distance includes

no such Thing. I prefer also the Word *Expansion* to *Space*, because *Space* is often applied to Distance of fleeting successive Parts, which never exist together, as well as to those which are permanent. In both these, (*viz.* *Expansion* and *Duration*) the Mind has this common *Idea* of continued Lengths, capable of greater, or less Quantities : For a Man has as clear an *Idea* of the Difference of the Length of an Hour, and a Day, as of an Inch and a Foot.

§. 2. THE Mind, having got the *Idea* of the Length of any Part of *Expansion*, let it be a Span, or a Pace, or what Length you will, *can*, as has been said, repeat that *Idea*; and so, adding it to the former, *enlarge its Idea of Length*, and make it equal to two Spans, or two Paces; and so as often as it will, till it equals the Distance of any Parts of the Earth one from another, and increase thus, 'till it amounts to the Distance of the Sun, or remotest Star. By such a Progression as this, setting out from the Place where it is, or any other Place, it can proceed and pass beyond all those Lengths, and find nothing to stop its going on, either in, or without Body. 'Tis true, we can easily, in our Thoughts, come to the End of solid Extension ; the Extremity and Bounds of all Body, we have no Difficulty to arrive at : But when the Mind is there, it finds nothing to hinder its Progress into this endless Expansion ; of that it can neither find, nor conceive any End. Nor let any one say, That beyond the Bounds of Body, there is nothing at all, unless he will confine GOD within the Limits of Matter. *Solomon*, whose Understanding was filled and enlarged with Wisdom, seems to have other Thoughts, when he says, *Heaven, and the Heaven of Heavens, cannot contain Thee*: And he, I think, very much magnifies to himself the Capacity of his own Understanding, who persuades himself, that he can extend his Thoughts farther than GOD exists, or imagine any Expansion where he is not.

§. 3. JUST so is it in Duration. THE Mind, having got the Idea of any Length of Duration, can double, multiply, and enlarge it, not only beyond its own, but beyond the Existence of all corporeal Beings, and all the Measures

*Expansion not
bounded by
Matter;*

*Nor Duration
by Motion.*

sures of Time, taken from the great Bodies of the World, and their Motions. But yet every one easily admits, That tho' we make Duration boundless, as certainly it is, we cannot yet extend it beyond all Being. GOD, every one easily allows, fills Eternity; and 'tis hard to find a Reason, why any one should doubt, that he likewise fills Immensity. His infinite Being is certainly as boundless one way as another ; and, methinks, it ascribes a little too much to Matter, to say, where there is no Body, there is nothing.

Why Men more easily admit infinite Duration, than infinite Expansion.

§. 4. HENCE, I think, we may learn the Reason, why every one familiarly, and without the least Hesitation, speaks of, and supposes Eternity, and sticks not to ascribe Infinity to Duration; but 'tis with more Doubting and Reserve, that many admit, or suppose the Infinity of Space. The Reason whereof seems to me to be this, that Duration and Extension being used as Names of Affections, belonging to other Beings, we easily conceive in GOD infinite Duration, and we cannot avoid doing so : But not attributing to him Extension, but only to Matter, which is finite, we are apter to doubt of the Existence of Expansion without Matter ; of which alone we commonly suppose it an Attribute. And, therefore, when Men pursue their Thoughts of Space, they are apt to stop at the Confines of Body; as if Space were there at an End too, and reached no farther. Or, if their Ideas, upon Consideration, carry them farther, yet they term what is beyond the Limits of the Universe, Imaginary Space ; as if it were nothing, because there is no Body existing in it. Whereas Duration, antecedent to all Body, and to the Motion which it is measured by, they never term imaginary; because it is never supposed void of some other real Existence. And, if the Names of Things may at all direct our Thoughts towards the Originals of Mens Ideas, (as I am apt to think they may very much) one may have Occasion to think, by the Name of Duration, that the Continuation of Existence, with a Kind of Resistance to any destructive Force, and the Continuation of Solidity, (which is apt to be confounded with, and if we will look into the minute, anatomical Parts of Matter,

ter, is little different from Hardness) were thought to have some Analogy, and gave Occasion to Words, so near of kin as *Durare* and *Durum esse*. And that *Durare* is applied to the Idea of Hardness, as well as that of Existence, we see in *Horace, Epod. 16. ferro duravit saecula*. But, be that as it will, this is certain, that whoever pursues his own Thoughts, will find them sometimes launch out, beyond the Extent of Body, into the Infinity of Space, or Expansion; the Idea whereof is distinct and separate from Body, and all other Things: Which may (to those who please) be a Subject of farther Meditation.

§. 5. TIME in general is to *Duration*, as *Place* to *Expansion*. They are so much of those boundless Oceans of Eternity, and Immensity, as is set out and distinguished from the rest, as it were by Land-marks; and so are made use of, to denote the Position of finite, real Beings, in respect one to another, in those uniform, infinite Oceans of Duration and Space. These, rightly considered, are only Ideas of determinate Distances, from certain known Points, fixed in distinguishable, sensible Things, and supposed to keep the same Distance one from another. From such Points, fixed in sensible Beings, we reckon, and from them we measure our Portions of those infinite Quantities; which, so considered, are that which we call *Time* and *Place*. For Duration and Space being, in themselves, uniform and boundless, the Order and Position of Things, without such known, settled Points, would be lost in them; and all Things would ly jumbled in an incurable Confusion.

§. 6. TIME and *Place* taken thus for determinate, distinguishable Portions of those infinite Abysses of Space and Duration, set out, or supposed to be distinguished from the rest by Marks, and known Boundaries, have each of them a twofold Acceptation.

First, TIME in general, is commonly taken for so much of infinite Duration, as is measured out by, and co-existent with the Existence and Motions of the great Bodies of the Universe, as far as we know any thing of them: And in this Sense, Time begins and ends with the Frame of this sensible World, as in

Time to Duration, is as Place to Expansion.

Time and Place are taken for so much of either, as are set out by the Existence and Motion of Bodies.

theſe

these Phrases before mentioned, *Before all Time*, or, *When Time shall be no more*. *Place* likewise is taken sometimes for that Portion of infinite Space, which is possessed by, and comprehended within the material World; and is thereby distinguished from the rest of Expansion; tho' this may more properly be called *Extension*, than *Place*. Within these two are confined, and by the observable Parts of them, are measured and determined the particular Time, or Duration, and the particular Extension and Place of all corporeal Beings.

Sometimes for so much of either, as we design by Measures, taken from the Bulk, or Motion of Bodies.

§. 7. Secondly, *SOMETIMES* the Word *Time* is used in a larger Sense, and is applied to Parts of that infinite Duration, not that were really distinguished, and measured out, by this real Existence, and periodical Motions of Bodies, that were appointed from the Beginning to be for Signs, and for Seasons, and for Days, and Years,

and are accordingly our Measures of Time; but such other Portions too, of that infinite, uniform Duration, which we, upon any Occasion, do suppose equal to certain Lengths of measured Time; and so consider them as bounded, and determined. For, if we should suppose the Creation, or Fall of the Angels, was at the Beginning of the *Julian Period*, we should speak properly enough, and should be understood, if we said, 'tis a longer Time since the Creation of Angels, than the Creation of the World, by 764 Years: Whereby we would mark out so much of that undistinguished Duration, as we suppose equal to, and would have admitted 764 annual Revolutions of the Sun, moving at the Rate it now does. And thus likewise we sometimes speak of Place, Distance, or Bulk, in the great *Inane*, beyond the Confines of the World, when we consider so much of that Space as is equal to, or capable to receive a Body, of any assigned Dimensions, as a Cubic Foot; or do suppose a Point in it, at such a certain Distance from any Part of the Universe.

They belong to all Beings.

§. 8. *Where* and *When* are Questions belonging to all finite Existences, and are by us always reckoned from some known Parts of this sensible World, and from some certain Epochs, marked out to us by

the

the Motions observable in it. Without some such fixed Parts, or Periods, the Order of Things would be lost, to our finite Understandings, in the boundless, invariable Oceans of Duration and Expansion; which comprehend in them all finite Beings, and in their full Extent belong only to the Deity. And, therefore, we are apt not to wonder, that we comprehend them not, and do so often find our Thoughts at a loss, when we would consider them, either abstractly in themselves, or as any way attributed to the first incomprehensible Being. But, when applied to any particular, finite Beings, the Extension of any Body is so much of that infinite Space, as the Bulk of that Body takes up. And Place is the Position of any Body, when considered at a certain Distance from some other. As the *Idea* of the particular *Duration* of any Thing is an *Idea* of that Portion of infinite *Duration*, which passes during the Existence of that thing; so the Time, when the Thing existed, is the *Idea* of that Space of Duration, which passed between some known and fixed Period of Duration, and the Being of that Thing. One shews the Distance of the Extremities of the Bulk, or Existence of the same Thing, as that it is a Foot Square, or lasted two Years; the other shews the Distance of it in Place, or Existence, from other fixed Points of Space, or Duration, as that it was in the Middle of *Lincolns-Inn-Fields*, or the first Degree of *Taurus*, and in the Year of our Lord 1671, or 1000th Year of the *Julian* Period: All which Distances we measure, by preconceived *Ideas* of certain Lengths of Space and Duration, as Inches, Feet, Miles, and Degrees; and in the other, Minutes, Days, and Years, &c.

§. 9. THERE is one Thing more, wherein *Space* and *Duration* have a great Conformity; and that is, Tho' they are justly reckoned amongst our *simple Ideas*, yet none of the distinct *Ideas* we have of either, is without all Manner of *Composition**; it is the very Nature of both of them

All the Parts of Extension, are Extension; and all the Parts of Duration, are Duration.

to

* It has been objected to Mr. *Locke*, that if Space consists of Parts, as 'tis confessed in this Place, he should not have reckoned it in the Number of Simple *Ideas*; because it seems to be inconsistent with what he says elsewhere, That a Simple *Idea* is uncomposed, and contains;

to consist of Parts : But their Parts being all of the same Kind, and, without the Mixture of any other *Idea*, hinder them not from having a Place amongst simple *Ideas*. Could the Mind, as in Number, come to so small a Part of Extension, or Duration, as excluded Divisibility, that would be, as it were, the indivisible Unit, or *Idea*; by Repetition of which, it would make its more enlarged *Ideas* of Extension and Duration. But, since the Mind is not able to frame an *Idea* of any Space without Parts ; instead thereof, it makes use of the common Measures, which, by familiar Use, in each Country, have imprinted themselves on the Memory (as Inches, and Feet; or Cubits, and Parasangs ; and so Seconds, Minutes, Hours, Days, and Years in Duration): The Mind makes use, I say, of such *Ideas* as these, as simple ones ; and these are the component Parts of larger *Ideas*, which the Mind, upon Occasion, makes, by the Addition of such known Lengths, which it is acquainted with. On the other side, the ordinary

tains in it nothing but one uniform Appearance, or Conception of the Mind, and is not distinguishable into different Ideas. Pag. 62. 'Tis farther objected, That Mr. *Locke* has not given in the 2d Chapter of the second Book, where he begins to speak of *Simple Ideas*, an exact Definition of what he understands by the Word *Simple Ideas*. To these Difficulties Mr. *Locke* answers thus : To begin with the last, he declares, That he has not treated this Subject, in an Order perfectly Scholastic, having not had much Familiarity with those sort of Books, during the writing of his, and not rememb'ring at all the Method in which they are written ; and, therefore, his Readers ought not to expect Definitions, regularly placed at the Beginning of each new Subject. Mr. *Locke* contents himself to employ the principal Terms that he uses, so, that from his use of them, the Reader may easily comprehend what he means by them. But, with respect to the Term *Simple Idea*, he has had the good Luck to define that, in the Place cited in the Objection ; and, therefore, there is no reason to supply that Defect. The Question then is to know, Whether the *Idea of Extension* agrees with this Definition ? Which will effectually agree to it, if it be understood in the Sense, which Mr. *Locke* had principally in his View ; for that Composition which he designed to exclude in that Definition, was a Composition of different *Ideas* in the Mind, and not a Composition of the same Kind in a Thing whose Essence consists in having Parts of the same Kind, where you can never come to a Part entirely exempted from this Composition. So that if the *Idea of Extension* consists in having *Partes extra Partes* (as the Schools speak) 'tis always, in the Sense of Mr. *Locke*, a *Simple Idea*;

because

ordinary smallest Measure we have of either, is look'd on as an Unit in Number, when the Mind, by Division, would reduce them into less Fractions. Tho' on both Sides, both in Addition and Division, either of Space, or Duration, when the *Idea* under Consideration becomes very big, or very small, its precise Bulk becomes very obscure and confused; and it is the Number of its repeated Additions, or Divisions, that alone remains clear and distinct, as will easily appear to any one, who will let his Thoughts loose in the vast Expansion of Space, or Divisibility of Matter. Every Part of Duration, is Duration too; and every Part of Extension, is Extension; both of them capable of Addition, or Division, *in infinitum*. But the least Portions of either of them, whereof we have clear and distinct *Ideas*, may, perhaps, be fittest to be considered by us, as the simple *Ideas* of that Kind, out of which our complex Modes of Space, Extension, and Duration, are made up, and into which they can again be distinctly resolved. Such

VOL. I.

A a

a small

because the *Idea*, of having *Partes extra Partes*, cannot be resolved into two other *Ideas*. For the Remainder of the Objection made to Mr. *Locke*, with respect to the Nature of Extension, Mr. *Locke* was aware of it, as may be seen in §. 9. Ch. 15. of the second Book, where he says, That the least Portion of Space, or Extension, whereof we have a clear and distinct *Idea*, may, perhaps, be the fittest to be consider'd by us, as a *Simple Idea* of that Kind, out of which our complex Modes of Space and Extension are made up. So that, according to Mr. *Locke*, it may very fitly be called a *Simple Idea*, since it is the least *Idea* of Space, that the Mind can form to itself, and that cannot be divided by the Mind into any less, whereof it has in itself any determined Perception. From whence it follows, that it is to the Mind one *Simple Idea*; and that is sufficient to take away this Objection: For 'tis not the Design of Mr. *Locke*, in this Place, to discourse of any thing, but concerning the *Ideas* of the Mind. But if this is not sufficient to clear the Difficulty, Mr. *Locke* hath nothing more to add, but that if the *Idea* of Extension is so peculiar, that it cannot exactly agree with the Definition, that he has given of those *Simple Ideas*, so that it differs in some manner from all others of that Kind, he thinks 'tis better to leave it there expos'd to this Difficulty, than to make a new Division in his Favour. 'Tis enough for Mr. *Locke* that his Meaning can be understood. 'Tis very common to observe intelligible Discourses spoiled by too much Subtilty in nice Divisions. We ought to put Things together, as well as we can, *Doctrinae Causa*; but, after all, several Things will not be bundled up together, under our Terms, and Ways of Speaking.

a small Part of Duration may be called a *Moment*, and is the Time of one *Idea* in our Minds, in the Train of their ordinary Succession there. The other, wanting a proper Name, I know not whether I may be allowed to call a *sensible Point*, meaning thereby the least Particle of Matter, or Space, we can discern, which is ordinarily about a Minute, and to the sharpest Eyes seldom less than thirty Seconds of a Circle, whereof the Eye is the Centre.

Their Parts inseparable.

§. 10. EXPANSION and Duration have this farther Agreement, that tho' they are both considered by us as having Parts, yet *their Parts* are *not separable* one from another, no, not even in Thought : Tho' the Parts of Bodies, from whence we take our Measure of the one, and the Parts of Motion, or rather the Succession of *Ideas* in our Minds, from whence we take the Measure of the other, may be interrupted and separated ; as the one is often by Rest, and the other is by Sleep, which we call Rest too.

Duration is as a Line, Expansion as a Solid. §. 11. But yet there is this manifest Difference between them, That the *Ideas* of Length, which we have of Expansion, are turned every

Way, and so make Figure, and Breadth, and Thickness ; but Duration is but, as it were, the Length of one strait Line, extended in infinitum, not capable of Multiplicity, Variation, or Figure ; but is one common Measure of all Existence whatsoever, wherein all Things, whilst they exist, equally partake. For this present Moment is common to all Things that are now in Being, and equally comprehends that Part of their Existence, as much as if they were all but one single Being ; and we may truly say, they all exist in the same Moment of Time. Whether Angels and Spirits have any Analogy to this, in respect of Expansion, is beyond my Comprehension : And, perhaps, for us, who have Understandings and Comprehensions suited to our own Preservation, and the Ends of our own Being, but not to the Reality and Extent of all other Beings ; 'tis near as hard to conceive any Existence, or to have an *Idea* of any real Being, with a perfect Negation of all manner of Expansion ; as it is to have the *Idea* of any real Existence, with a perfect

fect Negation of all manner of Duration : And, therefore, what Spirits have to do with Space, or how they communicate in it, we know not. All that we know, is, that Bodies do each singly possess its proper Portion of it, according to the Extent of its solid Parts ; and thereby exclude all other Bodies from having any Share in that particular Portion of Space, whilst it remains there.

§. 12. DURATION, and Time, which is a Part of it, is the Idea we have of perishing Distance, of which no two Parts exist together, but follow each other in Succession ; as Expansion is the Idea of lasting Distance, all whose Parts exist together, and are not capable of Succession. And, therefore, tho' we cannot conceive any Duration without Succession, nor can put it together in our Thoughts, that any Being does now exist To-morrow, or possess at once, more than the present Moment of Duration ; yet we can conceive the eternal Duration of the Almighty, far different from that of Man, or any other finite Being : Because Man comprehends not in his Knowledge, or Power, all past and future Things : His Thoughts are but of Yesterday, and he knows not what To-morrow will bring forth. What is once passed, he can never recall ; and what is yet to come, he cannot make present. What I say of Man, I say of all finite Beings ; who, tho' they may far exceed Man in Knowledge and Power, yet are no more than the meanest Creature, in comparison with God Himself. Finite of any Magnitude, holds not any Proportion to infinite. God's infinite Duration being accompanied with infinite Knowledge, and infinite Power, He sees all Things past, and to come ; and they are no more distant from His Knowledge, no farther removed from His Sight, than the present : They all lie under the same View ; and there is nothing which He cannot make exist each Moment, He pleases. For, the Existence of all Things depending upon His good Pleasure, all Things exist every Moment, that He thinks fit to have them exist. To conclude, Expansion and Duration do mutually embrace and comprehend each other ; every Part of Space, being in every Part of Duration ; and every Part of Duration, in every

*Duration has
never two Parts
together, Ex-
pansion all to-
gether.*

Part

Part of Expansion. Such a Combination of two distinct *Ideas*; is, I suppose, scarce to be found in all that great Variety we do, or can conceive, and may afford Matter to farther Speculation.

C H A P. XVI.

Of N U M B E R.

*Number, the
simplest and
most universal
Idea.*

§. 1.

A

MONGST all the *Ideas* we have, as there is none suggested to the Mind by more Ways, so there is

none more simple, than that of *Unity*, or One.

It has no Shadow of Variety, or Composition in it: Every Object our Senses are employ'd about, every *Idea* in our Understandings, every Thought of our Minds, brings this *Idea* along with it. And, therefore, it is the most intimate to our Thoughts, as well as it is, in its Agreement to all other Things, the most universal *Idea* we have. For Number applies itself to Men, Angels, Actions, Thoughts, every thing that either doth exist, or can be imagined.

*Its Modes made
by Addition.*

§. 2. By repeating this *Idea* in our Minds, and adding the Repetitions together, we come by the

complex Ideas of the Modes of it. Thus, by adding one to one, we have the complex *Idea* of a Couple: By putting twelve Units together, we have the complex *Idea* of a Dozen, and a Score, or a Million, or any other Number.

*Each Mode
distinct.*

§. 3. THE simple Modes of Number are of all other the most distinct; every the least Variati-

on, which is an Unit, making each Combination as clearly different from that which approacheth nearest to it, as the most remote; Two being as distinct from One, as Two Hundred; and the *Idea* of Two, as distinct from the *Idea* of Three, as the Magnitude of the whole Earth is from that of a Mite. This is not so in other simple Modes, in which it is not so easy, nor, perhaps, possible for us, to distinguish betwixt two approaching *Ideas*, which yet are really different. For who will undertake to find a Difference between the White of this Paper,

and

and that of the next Degree to it? Or can form distinct *Ideas* of every the least Excess in Extension?

§. 4. THE Clearness and *Distinctness* of each *Mode of Number* from all others, even those that approach nearest, makes me apt to think, that Demonstrations in Numbers, if they are not more evident and exact than in Extension, yet they are more general in their Use, and more determinate in their Application. Because the *Ideas* of Numbers are more precise and distinguishable than in Extension; where every Equality and Excess are not so easy to be observed, or measured; because our Thoughts cannot in Space arrive at any determined Smallness, beyond which it cannot go, as an Unit: And, therefore, the Quantity, or Proportion of any the least Excess cannot be discovered; which is clear otherwise in Number; where, as has been said, 91 is as distinguishable from 90, as from 9000, tho' 91 be the next immediate Excess to 90. But it is not so in Extension, where whatsoever is more than just a Foot, or an Inch, is not distinguishable from the Standard of a Foot, or an Inch; and in Lines, which appear of an equal Length, one may be longer than the other by innumerable Parts: Nor can any one assign an Angle, which shall be the next biggest to a right one.

Therefore De-
monstrations in
Numbers the
most precise.

§. 5. By the repeating, as has been said, of *Names necessary to Numbers*. the *Idea* of an Unit, and joining it to another Unit, we make thereof one collective *Idea*, marked by the Name *Two*. And whosoever can do this, and proceed on, still adding one more to the last collective *Idea* which he had of any Number, and give a Name to it, may count, or have *Ideas* for several Collections of Units, distinguished one from another, as far as he hath a Series of Names for following Numbers, and a Memory to retain that Series, with their several Names. All *Numeration* being but still the adding of one Unit more, and giving to the whole together, as comprehended in one *Idea*, a new, or distinct Name, or Sign, whereby to know it from those before and after, and distinguish it from every smaller and greater Multitude of Units. So that he that can add one to one, and so to two, and so go one with his Tale, taking still with him the distinct

distinct Names belonging to every Progression; and so again, by abstracting an Unit from each Collection, retreat and lessen them, is capable of all the *Ideas* of Numbers, within the Compass of his Language, or for which he hath Names, tho' not, perhaps, of more. For the several simple Modes of Numbers being in our Minds but so many Combinations of Units, which have no Variety, nor are capable of any other Difference, but more, or less, Names, or Marks, for each distinct Combination, seem more necessary, than in any sort of *Ideas*. For without such Names, or Marks, we can hardly well make use of Numbers in reckoning, especially where the Combination is made up of any great Multitude of Units; which put together, without a Name, or Mark, to distinguish that precise Collection, will hardly be kept from being an Heap in Confusion.

Names necessary to Numbers. §. 6. THIS I think to be the Reason, why some Americans, I have spoken with, (who were otherwise of quick, and rational Parts enough) could not, as we do, by any means, count to 1000; nor had any distinct *Idea* of that Number, tho' they could reckon very well to 20. Because their Language being scanty, and accommodated only to the few Necessaries of a needy, simple Life, unacquainted either with Trade, or Mathematics, had no Words in it to stand for 1000; so that, when they were discoursed with of those greater Numbers, they would shew the Hairs of their Head, to express a great Multitude, which they could not Number; which Inability, I suppose, proceeded from their want of Names. The *Toucupinambos* had no Names for Numbers above 5; any Number beyond that, they made out by shewing their Fingers, and the Fingers of others who were present: And

Histoire d'un Voyage fait en la Terre du Brasil, par Jean de Lery,
C. 20. $\frac{3}{8} \frac{7}{1}$.

I doubt not but we ourselves might distinctly number, in Words, a great deal farther than we usually do, would we find out but some fit Denominations to signify them by; whereas, in the Way we take now to name them, by Millions of Millions of Millions, &c. it is hard to go beyond 18, or, at most, 24 decimal Progressions, without Confusion. But to shew how much *distinct Names* conduce to our well reckoning,

reckoning, or having useful *Ideas* of Numbers, let us set all these following Figures, in one continued Line, as the Marks of one Number : *v. g.*

<i>Nonillions.</i>	<i>OEtillions.</i>	<i>Septillions.</i>	<i>Sextillions.</i>	<i>Quintrillions.</i>
857324.	162486.	345896.	437916.	423147.
<i>Quartillions.</i>	<i>Trillions.</i>	<i>Bilions.</i>	<i>Millions.</i>	<i>Units.</i>
248106.	235421.	261734.	368149.	623137.

THE ordinary way of naming this Number in *English*, will be the often repeating of Millions, (which is the Denomination of the second six Figures). In which way, it will be very hard to have any distinguishing Notions of this Number : But whether, by giving every six Figures a new and orderly Denomination, these, and, perhaps, a great many more Figures, in Progression, might not easily be counted distinctly, and *Ideas* of them both got more easily to ourselves, and more plainly signified to others, I leave it to be considered. This I mention, only to shew how necessary distinct Names are to Numbering, without pretending to introduce new ones of my Invention.

§. 7. *Thus Children, either for want of* *Why Children* *Names, to mark the several Progressions of* *number not* *Numbers, or not having yet the Faculty to col-* *earlier.*

lect scattered *Ideas* into complex ones, and range them in a regular Order, and so retain them in their Memories, as is necessary to reckoning, do not begin to number very early, nor proceed in it very far, or steadily, 'till a good while after they are well furnished with good store of other *Ideas*; and one may often observe them discourse, and reason pretty well, and have very clear Conceptions of several other Things, before they can tell 20. And some, thro' the Default of their Memories, who cannot retain the several Combinations of Numbers, with their Names, annexed in their distinct Orders, and the Dependence of so long a Train of numeral Progressions, and their Relation one to another, are not able, all their Lifetime, to reckon, or regularly

larily go over any moderate Series of Numbers. For he that will count Twenty, or have any *Idea* of that Number, must know that Nineteen went before, with the distinct Name, or Sign, of every one of them, as they stand marked in their Order; for wherever this fails, a Gap is made, the Chain breaks, and the Progress in numbering can go no farther. So that *to reckon right, it is required,* 1. That the Mind distinguish carefully two *Ideas*, which are different one from another only by the Addition, or Subtraction of one Unit. 2. That it retain, in Memory, the Names, or Marks, of the several Combinations from an Unit to that Number; and that not confusedly, and at random, but in that exact Order, that the Numbers follow one another: In either of which, if it trips, the whole Business of Numbering will be disturbed, and there will remain only the confused *Idea* of Multitude, but the *Ideas* necessary to distinct Numeration will not be attained to.

Number measures all Measurables. §. 8. This farther is observable in *Number*, that it is that which the Mind makes use of in *measuring all Things*, that by us are measurable, which principally are *Expansion and Duration*; and our *Idea* of Infinity, even when applied to those, seems to be nothing but the Infinity of Number. For what else are our *Ideas* of Eternity and Immensity, but the repeated Additions of certain *Ideas* of imagined Parts of Duration and Expansion, with the Infinity of Number, in which we can come to no End of Addition? For such an inexhaustible Stock, Number (of all other our *Ideas*) most clearly furnishes us with, as is obvious to every one. For let a Man collect into one Sum, as great a Number as he pleases, this Multitude, how great soever, lessens not one Jot the Power of adding to it, or brings him any nearer the End of the inexhaustible Stock of Number, where still there remains as much to be added, as if none were taken out. And this endless *Addition*, or *Addibility* (if any one like the Word better) of Numbers, so apparent to the Mind, is that, I think, which gives us the clearest, and most distinct *Idea* of Infinity: Of which more in the following Chapter.

C H A P. XVII.

Of INFINITY.

§. I. **H**E, that would know what kind of Idea it is, to which we give the Name of *Infinity*, cannot do it better, than by considering to what Infinity is by the Mind more immediately attributed, and then how the Mind comes to frame it.

Infinity, in its original Intention, attributed to Space, Duration, and Number.

FINITE and *Infinite* seem to me to be looked upon by the Mind as the *Modes of Quantity*, and to be attributed primarily in their first Designation only to those things which have Parts, and are capable of Increase, or Diminution, by the Addition, or Substraction of any the least Part: And such are the *Ideas* of Space, Duration, and Number, which we have considered in the foregoing Chapters. 'Tis true, that we cannot but be assured, that the great GOD, of whom, and from whom are all things, is incomprehensibly infinite: But yet, when we apply to that first and supreme Being our *Idea* of Infinite, in our weak and narrow Thoughts, we do it primarily in respect of His Duration and Ubiquity; and, I think, more figuratively, to His Power, Wisdom, and Goodness, and other Attributes, which are properly inexhaustible, and incomprehensible, &c. For when we call them infinite, we have no other *Idea* of this Infinity, but what carries with it some Reflexion on, and Intimation of that Number, or Extent, of the Acts, or Objects, of God's Power, Wisdom, and Goodness, which can never be supposed so great, or so many, which these Attributes will not always surmount and exceed, let us multiply them in our Thoughts as far as we can, with all the Infinity of endless Number. I do not pretend to say how these Attributes are in GOD, who is infinitely beyond the Reach of our narrow Capacities: They do, without doubt, contain in them all possible Perfection; but this, I say, is our way of conceiving them, and these our *Ideas* of their Infinity.

*The Idea of
Finite easily
found.*

§. 2. FINITE then, and Infinite, being by the Mind look'd on as Modifications of Expansion and Duration, the next thing to be considered, is, *How the Mind comes by them.* As for the *Idea of Finite*, there is no great Difficulty. The obvious Portions of Extension, that affect our Senses, carry with them into the Mind the *Idea of Finite*: And the ordinary Periods of Succession, whereby we measure Time and Duration, as Hours, Days, and Years, are bounded Lengths. The Difficulty is, how we come by those boundless *Ideas of Eternity and Immensity*; since the Objects, which we converse with, come so much short of any Approach, or Proportion, to that Largeness.

*How we come
by the Idea of
Infinity.*

§. 3. EVERY one, that has any *Idea* of any stated Lengths of Space, as a Foot, finds that he can repeat that *Idea*; and joining it to the former, make the *Idea* of two Feet; and by the Addition of a third, three Feet, and so on; without ever coming to an end of his Additions, whether of the same *Idea* of a Foot, or, if he pleases, of doubling it, or any other *Idea* he has of any Length, as a Mile, or Diameter of the Earth, or of the *Orbis Magnus*: For which soever of these he takes, and how often soever he doubles, or any otherwise multiplies it, he finds that, after he has continued his doubling in his Thoughts, and enlarged his *Idea* as much as he pleases, he has no more Reason to stop, nor is one Jot nearer the End of such Addition, than he was at first setting out: The Power of enlarging his *Idea of Space*, by farther Additions, remaining still the same, he hence takes the *Idea of infinite Space*.

*Our Idea of
Space bound-
less;*

§. 4. THIS, I think, is the way, whereby the Mind gets the *Idea of infinite Space*. 'Tis a quite different Consideration, to examine, whether the Mind has the *Idea of such a boundless Space, actually existing*, since our *Ideas* are not always Proofs of the Existence of Things; but yet, since this comes here in our way, I suppose I may say, that we are apt to think, that Space, in itself, is actually boundless; to which Imagination the *Idea of Space*, or Expansion, of itself, naturally leads us. For it being considered

considered by us, either as the Extension of Body, or as existing by itself, without any solid Matter taking it up, (for of such a void Space, we have not only the *Idea*, but I have prov'd, as I think, from the Motion of Body, its necessary Existence) it is impossible the Mind should be ever able to find, or suppose, any End of it, or be stopp'd any where, in its Progres in this Space, how far soever it extends its Thoughts. Any Bounds made with Body, even Adamantine Walls, are so far from putting a stop to the Mind in its farther Progress, in Space and Extension, that it rather facilitates and enlarges it; for so far as that Body reaches, so far no one can doubt of Extension: And when we are come to the utmost Extremity of Body, what is there that can there put a Stop, and satisfy the Mind that it is at the End of Space, when it perceives it is not; nay, when it is satisfied that Body itself can move into it? For, if it be necessary, for the Motion of Body, that there should be an empty Space, tho' ever so little, here amongst Bodies; and if it be possible for Body to move in, or thro' that empty Space; nay, it is impossible for any Particle of Matter to move, but into an empty Space, the same Possibility of a Body's moving into a void Space, beyond the utmost Bounds of Body, as well as into a void Space, interspersed amongst Bodies, will always remain clear and evident: The *Idea* of empty pure Space, whether within, or beyond the Confines of all Bodies, being exactly the same, differing not in Nature, tho' in Bulk; and there being nothing to hinder Body from moving into it. So that wherever the Mind places itself by any Thought, either amongst, or remote from all Bodies, it can, in this uniform *Idea* of Space, no where find any Bounds, any Ends; and so must necessarily conclude it, by the very Nature and *Idea* of each Part of it, to be actually infinite.

§. 5. As by the Power we find in ourselves of *And so of Duration.* repeating, as often as we will, any *Idea* of Space, we get the *Idea* of Immensity; so by being able to repeat the *Idea* of any Length of Duration we have in our Minds, with all the endless Addition of Number, we come by the *Idea* of Eternity. For we find in ourselves, we can no more come to an End of such repeated *Ideas*, than we can come to the End of Number.

Number, which every one perceives he cannot. But here again, 'tis another Question, quite different from our having an *Idea* of Eternity, to know, whether there were *any real Being*, whose Duration has been *eternal*. And as to this, I say, He that considers something now existing, must necessarily come to something *Eternal*. But having spoke of this in another Place, I shall say here no more of it, but proceed to some other Considerations of our *Idea* of Infinity.

Why other Ideas are not capable of being repeated, without End, our own Ideas; it may be demanded, *Why we do not attribute Infinity to other Ideas, as well as those of Space and Duration;* since they may be as easily, and as often repeated in our Minds, as the other; and yet nobody ever thinks of infinite Sweetness, or infinite Whiteness, tho' he can repeat the *Idea* of Sweet, or White, as frequently as those of a Yard, or a Day? To which I answer: All the *Ideas* that are considered as having Parts, and are capable of Increase, by the Addition of any equal, or less Parts, afford us, by their Repetition, the *Idea* of Infinity; because, with this endless Repetition, there is continued an Enlargement, of which there can be no End. But in other *Ideas* it is not so; for to the largest *Idea* of Extension, or Duration, that I at present have, the Addition of any the least Part makes an Increase; but to the perfectest *Idea* I have of the whitest Whiteness, if I add another of a less, or equal Whiteness, (and of a whiter than I have, I cannot add the *Idea*) it makes no Increase, and enlarges not my *Idea* at all; and, therefore, the different *Ideas* of Whiteness, &c. are called Degrees. For those *Ideas* that consist of Parts, are capable of being augmented by every Addition of the least Part; but, if you take the *Idea* of White, which one Parcel of Snow yielded yesterday to your Sight, and another *Idea* of White from another Parcel of Snow you see to-day, and put them together in your Mind, they embody, as it were, and run into one, and the *Idea* of Whiteness is not at all increased; and if we add a less degree of Whiteness to a greater, we are so far from increasing, that we diminish it. Those *Ideas* that consist not of Parts, cannot be augmented to what Proportion

on Men please, or be stretched beyond what they have received by their Senses; but Space, Duration, and Number, being capable of Increase by Repetition, leave in the Mind an *Idea* of an endless room for more; nor can we conceive any where a Stop to a farther Addition, or Progression, and so those *Ideas* alone lead our Minds towards the Thought of Infinity.

§. 7. THO' our *Idea* of Infinity arise from the Contemplation of Quantity, and the endless Increase the Mind is able to make in Quantity, by the repeated Additions of what Portions thereof

*Difference be-
tween Infinity
of Space, and
Space infinite.*

it pleases; yet, I guess, we cause great Confusion in our Thoughts, when we join Infinity to any supposed *Idea* of Quantity the Mind can be thought to have, and so discourse, or reason, about an infinite Quantity, (*viz.*) an infinite Space, or an infinite Duration. For, our *Idea* of *Infinity* being, as I think, an *endless growing Idea*, but the *Idea* of any Quantity the Mind has, being at that Time terminated in that *Idea*, (for be it as great as it will, it can be no greater than it is) to join Infinity to it, is to adjust a standing Measure to a growing Bulk; and, therefore, I think, it is not an insignificant Subtilty, if I say, that we are carefully to distinguish between the *Idea* of the *Infinity* of Space, and the *Idea* of a Space infinite: The first is nothing but a supposed endless Progression of the Mind, over what repeated *Ideas* of Space it pleases; but to have actually in the Mind the *Idea* of a Space infinite, is to suppose the Mind already passed over, and actually to have a View of all those repeated *Ideas* of Space, which an endless Repetition can never totally represent to it; which carries in it a plain Contradiction.

§. 8. THIS, perhaps, will be a little plainer, if we consider it in Numbers. The *Ininity* of Numbers, to the End of whose Addition every

*We have no
Idea of infinite
Space.*

one perceives there is no Approach, easily appears to any one that reflects on it: But how clear so ever this *Idea* of the *Ininity* of Number be, there is nothing yet more evident, than the Absurdity of the actual *Idea* of an infinite Number. Whatsoever positive *Ideas* we have in our Minds of any Space, Duration, or Number, let them be ever so great, they are still finite; but, when

we

we suppose an inexhaustible Remainder, from which we remove all Bounds, and wherein we allow the Mind an endless Progression of Thought, without ever compleating the *Idea*, there we have our *Idea* of Infinity; which, tho' it seems to be pretty clear, when we consider nothing else in it but the Negation of an End, yet, when we would frame in our Minds the *Idea* of an infinite Space, or Duration, that *Idea* is very obscure, and confused, because it is made up of two Parts, very different, if not inconsistent. For let a Man frame in his Mind an *Idea* of any Space, or Number, as great as he will; 'tis plain, the Mind rests and terminates in that *Idea*, which is contrary to the *Idea of Infinity*, which *consists in a supposed endless Progression*. And, therefore, I think it is, that we are so easily confounded, when we come to argue, and reason about infinite Space, or Duration, &c. because the Parts of such an *Idea*, not being perceived to be, as they are, inconsistent, the one Side or other always perplexes, whatever Consequences we draw from the other; as an *Idea* of Motion not passing on, would perplex any one, who should argue from such an *Idea*, which is not better than an *Idea* of Motion at rest; and such another seems to me to be the *Idea* of a Space, or (which is the same Thing) a Number infinite, i.e. of a Space, or Number, which the Mind actually has, and so views, and terminates in; and of a Space, or Number, which, in a constant and endless Enlarging, and Progression, it can, in Thought, never attain to. For how large soever an *Idea* of Space I have in my Mind, it is no larger than it is that Instant that I have it, tho' I be capable the next Instant to double it, and so on *in infinitum*: For that alone is infinite, which has no Bounds; and that the *Idea of Infinity*, in which our Thoughts can find none.

Number af- §. 9. But of all other *Ideas*, it is *Number*, as
fords us the I have said, which, I think, *furnishes us with the*
clearest Idea of *clearest and most distinct Idea of Infinity*, we are
Infinity. capable of. For even in Space and Duration,
 when the Mind pursues the *Idea of Infinity*, it there makes use
 of the *Ideas* and Repetitions of Numbers, as of Millions of Mil-
 lions of Miles, or Years, which are so many distinct *Ideas*, kept
 best by Number from running into a confused Heap, where-
 in

in the Mind loses itself; and when it has added together as many Millions, &c. as it pleases, of known Lengths of Space, or Duration, the clearest *Idea* it can get of Infinity, is the confused, incomprehensible Remainder of endless addible Numbers, which affords no Prospect of Stop, or Boundary.

§. 10. It will, perhaps, give us a little farther *Our different Conception of the Infinity of Number, Duration, and Expansion.* Light into the *Idea* we have of *Infinity*, and discover to us, that it is *nothing but the Infinity of Number, applied to determinate Parts*, of which we have in our Minds the distinct *Ideas*, if we

consider, that Number is not generally thought by us infinite, whereas Duration and Extension are apt to be so; which arises from hence, that in Number we are at one End as it were: For there being in Number nothing less than an Unit, we there stop, and are at an End; but in Addition, or Increase of Number, we can set no Bounds: And so it is like a Line, whereof one End terminating with us, the other is extended still forwards, beyond all that we can conceive; but in Space and Duration it is otherwise. For in Duration we consider it, as if this Line of Number were extended both ways to an unconceivable, undeterminate, and infinite Length; which is evident to any one, that will but reflect on what Consideration he hath of Eternity; which, I suppose, he will find to be nothing else, but the turning this Infinity of Number both ways, *à parte ante*, and *à parte post*, as they speak. For when we would consider Eternity, *à parte ante*, what do we but, beginning from ourselves, and the present Time we are in, repeat in our Minds the *Ideas* of Years, or Ages, or any other assignable Portion of Duration past, with a Prospect of proceeding, in such Addition, with all the Infinity of Number? And, when we would consider Eternity, *à parte post*, we just after the same Rate begin from ourselves, and reckon by multiplied Periods yet to come, still extending that Line of Number, as before: And these two being put together, are that infinite Duration we call *Eternity*; which, as we turn our View either way, forwards, or backwards, appears infinite, because we still turn that way the infinite End of Number, *i. e.* the Power still of adding more.

§. 11. THE same happens also in Space, wherein, conceiving ourselves to be, as it were, in the Centre, we do on all sides pursue those indeterminable Lines of Number; and reckoning any-way from ourselves, a Yard, Mile, Diameter of the Earth, or *Orbis Magnus*, by the Infinity of Number, we add others to them, as often as we will; and having no more reason to set Bounds to those repeated *Ideas*, than we have to set Bounds to Number, we have that indeterminable *Idea of Immensity*.

Infinite Divisibility. §. 12. AND since, in any Bulk of Matter, our Thoughts can never arrive at the utmost *Divisibility*.

§. 12. AND since, in any Bulk of Matter, our Thoughts can never arrive at the utmost *Divisibility*, therefore there is an apparent Infinity to us also, in that which has the Infinity also of Number; but with this Difference, That in the former Considerations of the Infinity of Space and Duration, we only use Addition of Numbers; whereas this is like the Division of an Unit into its Fractions, wherein the Mind also can proceed *in infinitum*, as well as in the former Additions, it being indeed but the Addition still of new Numbers: Tho' in the Addition of the one, we can have no more the positive *Idea of a Space*, infinitely great, than in the Division of the other, we can have the *Idea of a Body*, infinitely little; our *Idea of Infinity* being, as I may so say, a growing and fugitive *Idea*, still in a boundless Progression, that can stop no where.

No positive Idea of Infinite. §. 13. THO' it be hard, I think, to find any one so absurd, as to say, he has the positive *Idea of an actual, infinite Number*; the Infinity whereof lies only in a Power still of adding any Combination of Units to any former Number, and that as long, and as much as one will; the like also being in the Infinity of Space and Duration, which Power leaves always to the Mind room for endless Additions; yet there be those, who imagine they have *positive Ideas of infinite Duration and Space*. It would, I think, be enough to destroy any such positive *Idea of Infinite*, to ask him that has it, Whether he could add to it, or no? which would easily shew the Mistake of such a positive *Idea*.

We can, I think, have no positive *Idea of any Space, or Duration, which is not made up of, and commensurate to, repeated Numbers of Feet, or Yards, or Days, and Years, which are the common Measures, whereof*

we have the *Ideas* in our Minds, and whereby we judge of the Greatness of these Sort of Quantities. And, therefore, since an *Idea* of infinite Space, or Duration, must needs be made up of infinite Parts, it can have no other Infinity than that of Number, capable still of farther Addition, but not an actual, positive *Idea* of a Number infinite. For, I think, it is evident, that the Addition of finite Things together, (as are all Lengths, whereof we have the positive *Ideas*) can never otherwise produce the *Idea* of infinite, than as Number does; which, consisting of Additions of finite Units one to another, suggests the *Idea* of Infinite, only by a Power we find we have of still encreasing the Sum, and adding more of the same Kind, without coming one jot nearer the End of such Progression.

§. 14. THEY, who would prove their *Idea of Infinite to be positive*, seem to me to do it by a pleasant Argument, taken from the Negation of an End; which being negative, the Negation of it is positive. He that considers, that the End is in Body, but the Extremity, or Superficies of that Body, will not, perhaps, be forward to grant, that the End is a bare Negative; and he that perceives the End of his Pen is black, or white, will be apt to think, that the End is something more than a pure Negation. Nor is it, when applied to Duration, the bare Negation of Existence, but more properly the last Moment of it. But if they will have the End to be nothing but the bare Negation of Existence, I am sure they cannot deny, but that the Beginning is the first Instant of Being, and is not by any body conceived to be a bare Negation; and, therefore, by their own Argument, the *Idea of Eternal, à parte ante*, or of a Duration without a Beginning, is but a negative *Idea*.

§. 15. THE *Idea* of infinite has, I confess, something of positive, in all those Things we apply it to. When we would think of infinite Space, or Duration, we at first Step usually make some very large *Idea*, as, perhaps, of Millions of Ages, or Miles, which possibly we double, and multiply, several Times. All that we thus amass together in our Thoughts, is positive, and the Assemblage of a great Number of positive *Ideas* of Space, or Duration. But what still remains beyond this, we have no more

What is positive, what negative, in our Idea of Infinite.

a positive distinct Notion of, than a Mariner has of the Depth of the Sea ; where having let down a large Portion of his Sound-ing-Line, he reaches no Bottom : Whereby he knows the Depth to be so many Fathoms, and more ; but how much that more is, he hath no distinct Notion at all : And could he always supply new Line, and find the Plummet always sink, without ever stop-ping, he would be something in the Posture of the Mind, reach-ing after a complete and positive *Idea* of Infinity. In which case, let this Line be 10, or 10,000 Fathoms long, it equally dis-covers what is beyond it ; and gives only this confused and com-parative *Idea*, that this is not all, but one may yet go farther. So much as the Mind comprehends of any Space, it has a posi-tive *Idea* of: But in endeavouring to make it Infinite, it being always enlarging, always advancing, the *Idea* is still imper-fect and incom-plete. So much Space, as the Mind takes a View of, in its Contemplation of Greatness, is a clear Picture, and posi-tive in the Understanding: But Infinite is still greater. 1. Then, *the Idea of so much, is positive and clear.* 2. *The Idea of Great-er, is also clear, but it is but a comparative Idea.* 3. *The Idea of so much greater, as cannot be comprehended; and this is plain-ly negative, not positive.* For he has no positive, clear *Idea* of the Largeness of any Extension, (which is that sought for, in the *Idea* of Infinite) that has not a comprehensive *Idea* of the Di-mensions of it : And such, no body, I think, pretends to in what is Infinite. For to say a Man has a positive, clear *Idea* of any Quantity, without knowing how great it is, is as reaonable as to say, he has the positive, clear *Idea* of the Number of the Sands on the Sea-shore, who knows not how many they be; but only that they are more than Twenty. For just such a perfect and positive *Idea* has he of an infinite Space, or Duration, who says, it is larger than the Extent, or Duration of 10,100, or 1000, or any other Number of Miles, or Years, whereof he has, or can have a positive *Idea*; which is all the *Idea*, I think, we have of Infinite. So that what lies beyond our positive *Idea* towards Infinity, lies in Obscurity; and has the undeterminate Confusion of a Negative *Idea*, wherein, I know, I neither do, nor can com-prehend all I would, it being too large for a finite and narrow Capacity: And that cannot but be very far from a positive, com-plete

plete *Idea*, wherein the greatest Part, of what I would comprehend, is left out, under the undeterminate Intimation of being still greater : For to say, that having, in any Quantity, measured so much, or gone so far, you are not yet at an End, is only to say, that that Quantity is greater. So that the Negation of an End in any Quantity, is, in other Words, only to say, that it is bigger : And a total Negation of an End, is but the carrying this bigger still with you, in all the Progressions your Thoughts shall make in Quantity; and adding this *Idea* of still greater, to all the *Ideas* you have, or can be supposed to have of Quantity. Now, whether such an *Idea*, as that, be positive, I leave any one to consider.

§. 16. I ASK those, who say they have a *positive Idea of Eternity*, whether their *Idea of Duration* includes in it Succession, or not? If it does not, they ought to shew the Difference of their Notion of Duration, when applied to an eternal Being, and to a finite: Since, perhaps, there may be others, as well as I, who will own to them their Weakness of Understanding in this Point; and acknowledge, That the Notion they have of Duration forces them to conceive, that whatever has Duration, is of a longer Continuance To-day than it was Yesterday. If to avoid Succession in eternal Existence, they recur to the *Punctum Stans* of the Schools, I suppose they will thereby very little mend the Matter, or help us to a more clear and positive *Idea* of infinite Duration, there being nothing more inconceivable to me, than Duration without Succession. Besides, that *Punctum Stans*, if it signify any thing, being not *Quantum*, finite, or infinite, cannot belong to it. But if our weak Apprehensions cannot separate Succession from any Duration whatsoever, our *Idea of Eternity* can be nothing but of infinite Succession of Moments, of Duration, wherein any thing does exist; and whether any one has, or can have, a positive *Idea* of an actual infinite Number; I leave him to consider, till his infinite Number be so great, that he himself can add no more to it; and as long as he can increase it, I doubt he himself will think the *Idea* he hath of it, a little too scanty for positive Infinity.

§. 17. I THINK it unavoidable for every considering, rational Creature, that will but examine his own, or any other Existence,

to

to have the Notion of an eternal, wise Being, who had no Beginning: And such an *Idea* of infinite Duration, I am sure, I have. But this *Negation of a Beginning*, being but the Negation of a positive Thing, scarce gives me a *positive Idea of Infinity*; which, whenever I endeavour to extend my Thoughts to, I confess myself at a Loss, and find I cannot attain any clear Comprehension of it.

No positive Idea of infinite Space. §. 18. He that thinks he has a positive *Idea of infinite Space*, will, when he considers it, find that he can no more have a *positive Idea* of the greatest, than he has of *the least Space*. For in this latter, which seems the easier of the two, and more within our Comprehension, we are capable only of a comparative *Idea of Smallness*, which will always be less than any one whereof we have the positive *Idea*. All our positive *Ideas* of any Quantity, whether great, or little, have always Bounds; tho' our comparative *Idea*, whereby we can always add to the one, and take from the other, hath no Bounds. For that which remains, either great or little, not being comprehended in that positive *Idea* which we have, lies in Obscurity; and we have no other *Idea* of it, but of the Power of enlarging the one, and diminishing the other, without ceasing. A Pestle and Mortar will as soon bring any Particle of Matter to Indivisibility, as the acutest Thought of a Mathematician: And a Surveyor may as soon with his Chain measure out infinite *Space*, as a Philosopher by the quickest Flight of Mind reach it, or by thinking comprehend it, which is to have a positive *Idea of it*. He that thinks on a Cube of an Inch diameter, has a clear and positive *Idea of it* in his Mind, and so can frame one of $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$, and so on, till he has the *Idea* in his Thoughts of something very little; but yet reaches not the *Idea* of that incomprehensible Littleness which Division can produce. What remains of Smallness, is as far from his Thoughts as when he first began; and therefore he never comes at all to have a clear and positive *Idea of that Smallness*, which is consequent to infinite Divisibility.

What is positive, what negative, in our Idea of infinite. §. 19. EVERY one that looks towards Infinity, does, as I have said, at first Glance, make some very large *Idea of that which he applies it to*, let it be *Space*, or *Duration*; and possibly he wearies

wearies his Thoughts, by multiplying in his Mind that first large *Idea*; but yet by that he comes no nearer to the having a *positive, clear Idea*, of what remains to make up a positive Infinity, than the Country-Fellow had of the Water, which was yet to come, and pass the Channel of the River where he stood.

*Rusticus expe>at dum transeat amnis; at ille
Labitur, et labetur in omne volubilis ævum.*

§. 20. THERE are some I have met with, that put so much difference between infinite Duration and infinite Space, that they persuade themselves that they have a *positive Idea of Eternity*; but that they *have not*, nor can have, any *Idea of infinite Space*. The Reason of which Mistake I suppose to be this, that finding, by a due Contemplation of Causes and Effects, that it is necessary to admit some Eternal Being, and so, to consider the real Existence of that Being, as taking up, and commensurate to their *Idea of Eternity*; but on the other side, not finding it necessary, but, on the contrary, apparently absurd, that Body should be infinite; they forwardly conclude, they can have no *Idea of infinite Space*, because they can have no *Idea of infinite Matter*: Which Consequence, I conceive, is very ill collected; because the Existence of Matter is noways necessary to the Existence of Space, no more than the Existence of Motion, or the Sun, is necessary to Duration, tho' Duration uses to be measured by it; and I doubt not but a Man may have the *Idea of 10,000 Miles square*, without any Body so big, as well as the *Idea of 10,000 Years*, without any Body so old. It seems as easy to me to have the *Idea of Space*, empty of Body, as to think of the Capacity of a Bushel, without Corn, or the Hollow of a Nut-shell, without a Kernel in it; it being no more necessary that there should be existing a solid Body, infinitely extended, because we have an *Idea of the Infinity of Space*, than it is necessary that the World should be eternal, because we have an *Idea of infinite Duration*. And why should we think our *Idea of infinite Space* requires the real Existence of Matter to support it, when we find, that we have as clear an *Idea of infinite*

*Some think they
have a positive
Idea of Eterni-
ty, and not of
infinite Space.*

nite Duration to come, as we have of infinite Duration past? Tho', I suppose, no body thinks it conceivable, that any thing does, or has existed in that future Duration. Nor is it possible to join our *Idea* of future Duration, with present, or past Existence, any more than it is possible to make the *Ideas* of Yesterday, To-day, and To-morrow, to be the same; or bring Ages past and future together, and make them contemporary. But, if these Men are of the Mind that they have clearer *Ideas* of infinite Duration, than of infinite Space; because it is past doubt that GOD has existed from all Eternity, but there is no real Matter co-extended with infinite Space; yet those Philosophers, who are of Opinion, that infinite Space is possessed by GOD's infinite Omnipresence, as well as infinite Duration, by His eternal Existence, must be allowed to have as clear an *Idea* of infinite Space as of infinite Duration; tho' neither of them, I think, has any *positive Idea of Infinity* in either Case. For whatsoever positive *Ideas* a Man has in his Mind, of any Quantity, he can repeat it, and add it to the former, as easily as he can add together the *Ideas* of two Days, or two Paces; which are positive *Ideas* of Lengths he has in his Mind, and so on, as long as he pleases; whereby, if a Man had a positive *Idea* of Infinite, either Duration, or Space, he could add two Infinites together; nay, make one Infinite infinitely bigger than another, Absurdities too gross to be confuted!

Supposed positive Ideas of Infinity, Cause of Mistakes.

§. 21. BUT yet, after all this, there being Men who persuade themselves, that they have clear, positive, comprehensive *Ideas* of Infinity, it is fit they enjoy their Privilege; and I should be very glad (with some others that I know, who acknowledge they have none such) to be better informed by their Communication: For I have hitherto been apt to think, that the great and *inextricable Difficulties*, which perpetually involve all Discourses concerning *Infinity*, whether of Space, Duration, or Divisibility, have been the certain *Marks of a Defect in our Ideas of Infinity*, and the Disproportion the Nature thereof has to the Comprehension of our narrow Capacities. For, whilst Men talk and dispute of infinite Space, or Duration, as if they had as complete and positive *Ideas* of them, as they have of the Names they use for

for them, or as they have of a Yard, or an Hour, or any other determinate Quantity; it is no wonder if the incomprehensible Nature of the Thing they discourse of, or reason about, leads them into Perplexities and Contradictions, and their Minds be overlaid by an Object too large and mighty to be survey'd and manag'd by them.

§. 22. If I have dwelt pretty long on the Considerations of Duration, Space, and Number, and what arises from the Contemplation of them, Infinity ; it is possibly no more than the Matter requires, there being few simple Ideas whose Modes give more Exercise to the Thoughts of Men than these do. I pretend not to treat of them in their full Latitude ; it suffices to my Design, to shew how the Mind receives them, such as they are, from *Sensation* and *Reflexion*; and how even the *Idea* we have of *Infinity*, how remote soever it may seem to be from any Object of Sense, or Operation of our Mind, has, nevertheless, as all our other *Ideas*, its Original there. Some Mathematicians, perhaps, of advanced Speculations, may have other Ways to introduce into their Minds *Ideas of Infinity*; but this hinders not, but that they themselves, as well as all other Men, got the first *Ideas*, which they had of *Infinity*, from *Sensation* and *Reflexion*, in the Method we have here set down.

*All these Ideas
from Sensation
and Reflexion.*

C H A P. XVIII.

Of other Simple Modes.

§. 1. **T**H O' I have, in the foregoing Chapters, shewn, how, from simple Ideas, taken in by *Sensation*,

Modes of Motion.

the Mind comes to extend itself, even to *Infinity*; which, however, it may, of all others, seem most remote from any sensible Perception ; yet, at last, hath nothing in it, but what is made out of simple Ideas, received into the Mind by the Senses, and afterwards there put together by the Faculty of the Mind, as to repeat its own *Ideas*: Tho', I say, these might be Instances enough of Simple Modes of the simple

simple Ideas of *Sensation*, and suffice to shew how the Mind comes by them; yet I shall, for Method's Sake, tho' briefly, give an Account of some few more, and then proceed to more complex Ideas.

§. 2. To *slide, roll, tumble, walk, creep, run, dance, leap, skip,* and abundance of others that might be named, are Words which are no sooner heard, but every one, who understands *English*, has presently in his Mind distinct Ideas, which are all but the different Modifications of Motion. *Modes of Motion* answer those of Extension: *Swift* and *Slow* are two different Ideas of Motion, the Measures whereof are made of the Distances of Time, and Space, put together; so they are complex Ideas, comprehending Time and Space with Motion.

Modes of Sounds. §. 3. THE like Variety have we in Sounds. Every articulate Word is a different Modification of Sound; by which we see, that from the

Sense of Hearing, by such Modifications, the Mind may be furnished with distinct Ideas to almost an infinite Number. Sounds also, besides the distinct Cries of Birds and Beasts, are modified by Diversity of Notes, of different Length, put together, which make that complex Idea call'd a *Tune*, which a Musician may have in his Mind, when he hears, or makes no Sound at all, by reflecting on the Ideas of those Sounds, so put together, silently in his own Fancy.

Modes of Colours. §. 4. THOSE of Colours are also very various; somewe take notice of, as the different Degrees, or, as they are termed, *Shades of the same Colour*.

But since we very seldom make Assemblages of Colours, either for Use, or Delight, but Figure is taken in also, and has its Part in it; as in Painting, Weaving, Needle-works, &c. those which are taken notice of, do most commonly belong to mix'd Modes, as being made up of Ideas of divers Kinds, viz. Figure and Colour; such as *Beauty, Rainbow, &c.*

Modes of Taste. §. 5. ALL compounded Tastes and Smells are also Modes made up of the simple Ideas of those Senses. But they being such as generally we have no Names for, are less taken notice of, and cannot be set down

in Writing; and, therefore, must be left without Enumeration to the Thoughts, and Experience of my Reader.

§. 6. In general it may be observed, that those *Simple Modes, which are considered but as different Degrees of the same simple Idea*, tho' they are in themselves, many of them, very distinct Ideas, yet have ordinarily no distinct Names, nor are much taken notice of as distinct Ideas, where the difference is but very small between them. Whether Men have neglected these Modes, and given no Names to them, as wanting Measures nicely to distinguish them; or because, when they were so distinguished, that Knowledge would not be of general, or necessary Use, I leave it to the Thoughts of others: It is sufficient to my Purpose to shew, that all our simple Ideas come to our Minds only by Sensation and Reflexion; and that, when the Mind has them, it can variously repeat and compound them, and so make new complex Ideas. But tho' White, Red, or Sweet, &c. have not been modified, or made into complex Ideas, by several Combinations, so as to be nam'd, and thereby rank'd into Species; yet some others of the simple Ideas, viz. those of Unity, Duration, Motion, &c. above instanc'd in, as also Power and Thinking, have been thus modified, to a great Variety of complex Ideas, with Names belonging to them.

§. 7. THE reason whereof, I suppose, has been this, that the great Concernment of Men being with Men, one amongst another, the Knowledge of Men and their Actions, and their signifying of them to one another, was most necessary; and, therefore, they made Ideas of Actions, very nicely modified, and gave those complex Ideas Names, that they might the more easily record, and discourse of those Things they were daily conversant in, without long Ambages and Circumlocutions; and that the Things, they were continually to give and receive Information about, might be the easier and quicker understood. That this is so, and that Men, in framing different complex Ideas, and giving them Names, have been much governed by the End of Speech in general, (which is a very short and expedite way of

Some Simple Modes have no Names.

Why some Modes have, and others have not Names.

conveying their Thoughts one to another) is evident in the Names, which in several Arts have been found out, and applied to several complex *Ideas* of modified Actions, belonging to their several Trades, for Dispatch sake, in their Direction, or Discourse, about them. Which *Ideas* are not generally fram'd in the Minds of Men, not conversant about these Operations. And thence the Words that stand for them, by the greatest Part of Men of the same Language, are not understood: *v.g. Colshire, Drilling, Filtration, Cokobation,* are Words standing for certain complex *Ideas*, which being seldom in the Minds of any, but those few, whose particular Employments do at every Turn suggest them to their Thoughts, those Names of them are not generally understood, but by Smiths and Chymists; who having fram'd the complex *Ideas*, which these Words stand for, and having given Names to them, or receiv'd them from others, upon hearing of these Names in Communication, readily conceive those *Ideas* in their Minds; as by *Cokobation* all the simple *Ideas* of distilling, and the pouring the Liquor, distill'd from any thing, back upon the remaining Matter, and distilling it again. Thus we see, that there are great Varieties of simple *Ideas*, as of Tastes and Smells, which have no Names; and of Modes many more. Which either not having been generally enough observed, or else not being of any great Use to be taken notice of, in the Affairs and Converse of Men, they have not had Names given to them, and so pass not for Species. This we shall have occasion hereafter to consider more at large, when we come to speak of Words.

C H A P. XIX.

Of the Modes of Thinking.

Sensation, Remembrance, Contemplation, &c.

§. I. **W**HEN the Mind turns its View inwards upon itself, and contemplates its own Actions, *Thinking* is the first that occurs. In it the Mind observes a great Variety of Modifications, and from thence receives

ceives distinct *Ideas*. Thus the Perception, which actually accompanies, and is annexed to any Impression on the Body, made by an external Object, being distinct from all other Modifications of *Thinking*, furnishes the Mind with a distinct *Idea*, which we call *Sensation*; which is, as it were, the actual Entrance of any *Idea* into the Understanding, by the Senses. The same *Idea*, when it again recurs, without the Operation of the like Object on the external Sensory, is *Remembrance*: If it be sought after by the Mind, and with Pain and Endeavour found, and brought again in view, it is *Recollection*: If it be held there long under attentive Consideration, it is *Contemplation*. When *Ideas* float in our Mind, without any Reflexion, or Regard of the Understanding, it is that which the French call *Reverie*; our Language has scarce a Name for it. When the *Ideas* that offer themselves (for, as I have observed in another Place, whilst we are awake, there will always be a Train of *Ideas*, succeeding one another, in our Minds) are taken notice of, and, as it were, register'd in the Memory, it is *Attention*. When the Mind, with great Earnestness, and of Choice, fixes its View on any *Idea*, considers it on all sides, and will not be called off, by the ordinary Sollicitation of other *Ideas*, it is that we call *Intention*, or *Study*: Sleep, without dreaming, is Rest from all these: And *Dreaming* itself, is the having of *Ideas* (whilst the outward Senses are stopt, so that they receive not outward Objects, with their usual Quickness) in the Mind, not suggested by any external Objects, or known Occasion; nor under any Choice, or Conduct of the Understanding at all. And whether that, which we call *Extasy*, be not dreaming with the Eyes open, I leave to be examined.

§. 2. THESE are some few Instances of those various *Modes of Thinking*, which the Mind may observe in itself, and so have as distinct *Ideas* of, as it hath of *White*, and *Red*, a *Square*, or a *Circle*. I do not pretend to enumerate them all, nor to treat at large of this Set of *Ideas*, which are got from *Reflexion*; that would be to make a Volume. It suffices to my present Purpose to have shewn here, by some few Examples, of what sort these *Ideas* are, and how the Mind comes by them; especially, since

since I shall have occasion hereafter to treat more at large of *Reasoning, Judging, Volition, and Knowledge*; which are some of the most considerable Operations of the Mind, and *Modes of Thinking*.

The various Attention of the Mind in Thinking.

§. 3. But, perhaps, it may not be an unpardonable Digression, nor wholly impertinent to our present Design, if we reflect here upon the different State of the Mind in Thinking, which

those Instances of Attention, Reverie, and Dreaming, &c. before-mentioned, naturally enough suggest. That there are Ideas, some, or other, always present, in the Mind of a waking Man, every one's Experience convinces him; tho' the Mind employs itself about them, with several degrees of Attention. Sometimes the Mind fixes itself with so much Earnestness on the Contemplation of some Objects, that it turns their Ideas on all sides, remarks their Relations and Circumstances, and views every Part so nicely, and with such Intention, that it shuts out all other Thoughts, and takes no notice of the ordinary Impressions made then on the Senses, which, at another Season, would produce very sensible Perceptions: At other times, it barely observes the Train of Ideas that succeed in the Understanding, without directing and pursuing any of them; and at other times, it lets them pass almost quite unregarded, as faint Shadows, that make no Impression.

Hence it is probable, that thinking is the Action, not Essence of the Soul.

§. 4. THIS Difference of Intention, and Remission of the Mind in thinking, with a great variety of degrees between earnest Study, and very near minding nothing at all, every one, I think, has experimented in himself. Trace it a little

further, and you find the Mind, in Sleep, retired as it were from the Senses; and out of the reach of those Motions made on the Organs of Sense, which, at other times, produce very vivid and sensible Ideas. I need not, for this, instance in those who sleep out whole Stormy Nights, without hearing the Thunder, or seeing the Lightning, or feeling the shaking of the House, which are sensible enough to those who are waking: But in this Retirement of the Mind from the Senses, it often retains a yet more loose and incoherent manner of Thinking, which

we

we call *Dreaming*: And last of all, found Sleep closes the Scene quite, and puts an End to all Appearances. This, I think, almost every one has Experience of in himself, and his own Observation, without Difficulty, leads him thus far. That which I would farther conclude from hence, is, That since the Mind can sensibly put on, at several Times, several Degrees of *Thinking*; and be sometimes, even in a waking Man, so remiss, as to have Thoughts dim and obscure, to that Degree, that they are very little removed from none at all; and, at last, in the dark Retirements of sound Sleep, loses the Sight perfectly of all *Ideas* whatsoever: Since, I say, this is evidently so in Matter of Fact, and constant Experience, I ask, whether it be not probable, that *Thinking is the Action, and not the Essence of the Soul?* Since the Operations of Agents will easily admit of Intention and Remission; but the Essences of Things are not conceived capable of any such Variation. But this by the bye.

C H A P. XX.

Of Modes of Pleasure and Pain.

§. 1. **A** Mongst the simple *Ideas*, which we receive, both from *Sensation* and *Reflexion*, *Pain* and *Pleasure* are two very considerable ones. For, as in the Body, there is *Sensation* barely in itself, or accompanied with *Pain*, or *Pleasure*; so the Thought, or Perception of the Mind, is simply so, or else accompanied also with *Pleasure*, or *Pain*, Delight, or Trouble, call it how you please. These, like other simple *Ideas*, cannot be described, nor their Names defined; the way of knowing them, is, as of the simple *Ideas* of the Senses, only by Experience. For to define them by the Presence of Good, or Evil, is no otherwise to make them known to us, than by making us reflect on what we feel in ourselves, upon the several and various Operations of Good and Evil upon our Minds, as they are differently applied to, or considered by us.

§. 2. THINGS

Good and Evil, §. 2. THINGS then are Good, or Evil, only what. in Reference to Pleasure, or Pain. That we call *Good*, which is apt to cause, or increase Pleasure, or diminish Pain in us; or else to procure, or preserve us the Possession of any other Good, or Absence of any Evil. And, on the contrary, we name that *Evil*, which is apt to produce, or increase any Pain, or diminish any Pleasure in us; or else to procure us any Evil, or deprive us of any Good. By Pleasure and Pain, I must be understood to mean of Body, or Mind, as they are commonly distinguished; tho', in truth, they be only different Constitutions of the Mind, sometimes occasioned by Disorder in the Body, sometimes by Thoughts in the Mind.

Our Passions moved by Good, and Evil. §. 3. PLEASURE and Pain, and that which causes them, Good and Evil, are the Hinges on which our *Passions* turn: And, if we reflect on ourselves, and observe how these, under various Considerations, operate in us; what Modifications, or Tempers of Mind, what internal Sensations (if I may so call them) they produce in us, we may thence form to ourselves the *Ideas* of our *Passions*.

Love. §. 4. THUS, any one reflecting upon the Thought he has of the Delight, which any present or absent Thing is apt to produce in him, has the *Idea* we call *Love*. For when a Man declares in Autumn, when he is eating them, or in Spring, when there are none, that he *loves* Grapes, it is no more, but that the Taste of Grapes delights him; let an Alteration of Health, or Constitution destroy the Delight of their Taste, and he then can be said to *love* Grapes no longer.

Hatred. §. 5. ON the contrary, the Thought of the Pain, which any Thing present, or absent, is apt to produce in us, is what we call *Hatred*. Were it my Busines here, to enquire any farther than into the bare *Ideas* of our *Passions*, as they depend on different Modifications of Pleasure and Pain, I should remark, that our *Love* and *Hatred* of inanimate, insensible Beings, is commonly founded on that Pleasure and Pain, which we receive, from their Use and Application, any Way, to our Senses, tho' with their Destruction: But *Hatred*, or *Love*,

Love, to Beings capable of Happiness, or Misery, is often the Uneasiness, or Delight, which we find in ourselves, arising from a Consideration of their very Being, or Happiness. Thus the Being and Welfare of a Man's Children, or Friends, producing constant Delight in him, he is said constantly to *love* them. But it suffices to note, that our Ideas of *Love* and *Hatred*, are but the Dispositions of the Mind, in respect of Pleasure and Pain in general, however caused in us.

§. 6. THE Uneasiness a Man finds in himself *Desire.*
upon the Absence of any Thing, whose present

Enjoyment carries the Idea of Delight with it, is, that we call *Desire*; which is greater, or less, as that Uneasiness is more, or less vehement. Where, by the bye, it may, perhaps, be of some Use to remark, that the chief, if not only Spur to Human Industry and Action, is Uneasiness. For, whatever Good is propos'd, if its Absence carries no Displeasure, nor Pain with it; if a Man be easy and content without it, there is no Desire of it, nor Endeavour after it; there is no more but a bare *Velleity*, the Term used to signify the lowest Degree of Desire, and that which is next to none at all, when there is so little Uneasiness in the Absence of any Thing, that it carries a Man no farther than some faint Wishes for it, without any more effectual, or vigorous Use of the Means to attain it. *Desire* also is stopp'd, or abated by the Opinion of the Impossibility, or Unattainableness of the Good propos'd, as far as the Uneasiness is cured, or allay'd by that Consideration. This might carry our Thoughts farther, were it seasonable in this Place.

§. 7. Joy is a Delight of the Mind, from the Con- *Joy.*

sideration of the present, or assured approaching Possession of a Good; and we are then possessed of any Good, when we have it so in our Power, that we can use it when we please. Thus a Man, almost starved, has *Joy* at the Arrival of Relief, even before he has the Pleasure of using it: And a Father, in whom the very Well-being of his Children causes Delight, is always, as long as his Children are in such a State, in the Possession of that Good; for he needs but to reflect on it, to have that Pleasure.

§. 8. SORROW

Sorrow. §. 8. SORROW is Uneasiness in the Mind, upon the Thought of a Good lost, which might have been enjoy'd longer; or the Sense of a present Evil.

Hope. §. 9. HOPE is that Pleasure in the Mind, which every one finds in himself, upon the Thought of a profitable, future Enjoyment of a Thing, which is apt to delight him.

Fear. §. 10. FEAR is an Uneasiness of the Mind, upon the Thought of future Evil likely to befall us.

Despair. §. 11. DESPAIR is the Thought of the Unattainableness of any Good, which works differently in Men's Minds, sometimes producing Uneasiness, or Pain, sometimes Rest and Indolency.

Anger. §. 12. ANGER is an Uneasiness, or Discomposure of the Mind, upon the Receipt of any Injury, with a present Purpose of Revenge.

Envoy. §. 13. ENVY is an Uneasiness of Mind, caused by the Consideration of a Good we desire, obtained by one, we think should not have had it before us.

What Passions all Men have. §. 14. THESE two last, *Envoy* and *Anger*; not being caused by Pain and Pleasure, simply in themselves, but having in them some mixed Considerations of ourselves and others, are not therefore to be found in all Men; because those other Parts of valuing their Merits, or intending Revenge, is wanting in them: But all the rest, terminated purely in Pain and Pleasure, are, I think, to be found in all Men. For we *love*, *desire*, *rejoice*, and *hope*, only in respect of Pleasure; we *hate*, *fear*, and *grieve*, only in respect of Pain ultimately: In fine, all these Passions are moved by things, only as they appear to be the Causes of Pleasure and Pain, or to have Pleasure, or Pain, some Way or other annexed to them. Thus we extend our Hatred usually to the Subject (at least if a sensible, or voluntary Agent) which has produced Pain in us; because the Fear it leaves, is a constant Pain: But we do not so constantly love what has done us good; because Pleasure operates not so strongly on us as Pain, and because we are not so ready to have hope it will do so again. But this by the bye.

§. 15. By *Pleasure and Pain*, Delight and Uneasiness, I must all along be understood (as I have above intimated) to mean, not only bodily Pain and Pleasure, but whatsoever *Delight*, or *Uneasiness* is felt by us, whether arising from any grateful, or unacceptable Sensation, or Reflexion.

§. 16. 'Tis farther to be considered, That in Reference to the Passions, the Removal, or *Lessening of a Pain*, is consider'd, and operates as a *Pleasure*; and the Loss, or Diminishing of a Pleasure, as a Pain.

§. 17. THE Passions too, have most of them, in most Persons, Operations on the Body, and cause various Changes in it, which, not being always sensible, do not make a necessary Part of the *Idea* of each Passion. For *Shame*, which is an Uneasiness of the Mind, upon the Thought of having done something which is indecent, or will lessen the valued Esteem, which others have for us, has not always Blushing accompanying it.

§. 18. I WOULD not be mistaken here, as if I meant this as a Discourse of the *Passions*; they are *many more than those* I have here named; and those I have taken Notice of, would each of them require a much larger, and more accurate Discourse. I have only mentioned these here, as so many Instances of Modes of Pleasure and Pain, resulting in our Minds from various Considerations of Good and Evil. I might, perhaps, have instanced in other Modes of Pleasure and Pain, more simple than these; as the Pain of *Hunger* and *Thirst*, and the Pleasure of eating and drinking to remove them; the Pain of tender Eyes, and the Pleasure of Music; Pain from captious, and uninstructive Wrangling, and the Pleasure of rational Conversation with a Friend, or of well-directed Study, in the Search and Discovery of Truth. But the Passions, being of much more Concernment to us, I rather made Choice to instance in them, and shew how the *Ideas* we have of them are derived from Sensation and Reflexion.

Pleasure and Pain, what.

Those Instances do shew how our Ideas of the Passions are got from Sensation and Reflexion.

C H A P. XXI.

Of P o w e r.

*This Idea how
got.*

§. 1.

THE Mind being every Day informed, by the Senses, of the Alteration of those simple *Ideas* it observes

in Things without, and taking notice how one comes to an end; and ceases to be, and another begins to exist, which was not before; reflecting also on what passes within itself, and observing a constant Change of its *Ideas*, sometimes by the Impression of outward Objects of the Senses, and sometimes by the Determination of its own Choice; and concluding from what it has so constantly observed to have been, that the like Changes will for the future be made in the same Things, by like Agents, and by the like Ways, considers in one thing the Possibility of having any of its simple *Ideas* changed, and in another the Possibility of making that Change; and so comes by that *Idea* which we call *Power*. Thus we say, Fire has a *Power* to melt Gold, i. e. to destroy the Consistency of its insensible Parts, and consequently its Hardness, and make it fluid; and Gold has a *Power* to be melted: That the Sun has a *Power* to blanch Wax, and Wax a *Power* to be blanched by the Sun, whereby the Yellowness is destroy'd, and Whiteness made to exist in its room. In which, and the like Cases, the *Power*, we consider, is in reference to the Change of perceptible *Ideas*. For we cannot observe any Alteration to be made in, or Operation upon any thing, but by the observable Change of its sensible *Ideas*: Nor conceive any Alteration to be made, but by conceiving a Change of some of its *Ideas*.

*Power active
and passive.*

§. 2. *POWER*, thus consider'd, is two-fold, viz. as able to make, or able to receive any Change:

The one may be called *Active*, and the other *Passive Power*. Whether Matter be not wholly destitute of *active Power*, as its Author GOD is truly above all *passive Power*; and whether the intermediate State of created Spirits be not that, alone, which is capable of both *active* and *passive Power*, may be

be worth Consideration. I shall not now enter into that Enquiry; my present Busines being not to search into the Original of Power, but how we come by the *Idea* of it. But since *active Powers* make so great a Part of our complex *Ideas* of natural Substances (as we shall see hereafter) and I mention them, as such, according to common Apprehension; yet they being not, perhaps, so truly *active Powers*, as our hasty Thoughts are apt to represent them, I judge it not amiss, by this Intimation, to direct our Minds to the Consideration of GOD and Spirits, for the clearest *Idea* of *active Powers*.

§. 3. I CONFESS Power includes in it some kind of relation (a relation to Action, or Change) as indeed which of our *Ideas*, of what kind soever, when attentively consider'd, does not? For our *Ideas* of Extension, Duration, and Number, do they not all contain in them a secret relation to the Parts? Figure and Motion have something relative in them, much more visibly; and sensible Qualities, as Colours, and Smells, &c. what are they but the Powers of different Bodies, in relation to our Perception, &c? And, if consider'd in the Things themselves, do they not depend on the Bulk, Figure, Texture, and Motion of the Parts? All which include some kind of relation in them. Our *Idea*, therefore, of Power, I think, may well have a Place amongst other simple *Ideas*, and be consider'd as one of them, being one of those, that make a principal Ingredient in our complex *Ideas* of Substances; as we shall hereafter have occasion to observe.

§. 4. WE are abundantly furnish'd with the *Idea of passive Power*, by almost all sorts of sensible Things. In most of them we cannot avoid observing their sensible Qualities, nay, their very Substances to be in a continual Flux: And, therefore, with reason, we look on them as liable still to the same Change. Nor have we of *active Power* (which is the more proper Signification of the Word *Power*) fewer Instances; since whatever Change is observed, the Mind must collect a Power, somewhere, able to make that Change, as well as a Possibility in the Thing itself to receive it. But yet, if we will consider it attentively, Bodies, by our Senses, do not afford us so clear and distinct an *Idea of active*

The clearest Idea of active Power had from Spirit.

active Power, as we have from Reflexion on the Operations of our Minds. For all *Power* relating to Action, and there being but two Sorts of Action, whereof we have any *Idea*, viz. Thinking and Motion; let us consider whence we have the clearest *Idea* of the *Powers*, which produce these Actions. 1. Of thinking; Body affords us no *Idea* at all, it is only from Reflexion that we have that. 2. Neither have we from Body any *Idea* of the beginning of Motion. A Body at rest affords us no *Idea* of any *active Power* to move; and when it is set in motion itself, that Motion is rather a Passion, than an Action in it. For, when the Ball obcys the Stroke of a Billiard-stick, it is not any Action of the Ball, but bare Passion: Also, when by Impulse it sets another Ball in motion that lay in its way, it only communicates the Motion it had received from another, and loses in itself so much as the other received; which gives but a very obscure *Idea* of an *active Power* of moving in Body, whilst we observe it only to transfer, but not produce any Motion. For it is but a very obscure *Idea* of *Power*, which reaches not the Production of the Action, but the Continuation of the Passion. For so is Motion, in a Body impelled by another: The Continuation of the Alteration made in it from Rest to Motion, being little more an Action, than the Continuation of the Alteration of its Figure by the same Blow, is an Action. The *Idea* of the beginning of Motion, we have only from Reflexion on what passes in ourselves, where we find, by Experience, that barely by willing it, barely by a Thought of the Mind, we can move the Parts of our Bodies, which were before at rest. So that it seems to me, we have from the Observation of the Operation of Bodies, by our Senses, but a very imperfect, obscure *Idea* of *active Power*, since they afford us not any *Idea* in themselves of the *Power* to begin any Action, either Motion, or Thought. But if, from the Impulse Bodies are observed to make one upon another, any one thinks he has a clear *Idea* of *Power*, it serves as well to my Purpose, *Sensation* being one of those Ways, whereby the Mind comes by its *Ideas*: Only I thought it worth while to consider here, by the way, whether the Mind doth not receive its *Idea* of *active Power* clearer from Reflexion on its own Operations, than it doth from any external Sensation.

§. 5. THIS, at least, I think evident, that we find in ourselves a *Power* to begin, or forbear, continue, or end, several Actions of our Minds, and Motions of our Bodies, barely by a Thought, or Preference of the Mind, ordering, or, as it were, commanding the doing, or not doing, such or such a particular Action. This *Power*, which the Mind has thus to order the Consideration of any *Idea*, or the forbearing to consider it; or to prefer the Motion of any Part of the Body to its Rest, and *vice versa*, in any particular Instance, is that which we call the *Will*. The actual Exercise of that Power, by directing any particular Action, or its Forbearance, is that which we call *Volition*, or *Willing*. The Forbearance of that Action, consequent to such Order, or Command, of the Mind, is called *Voluntary*: And whatsoever Action is performed, without such a Thought of the Mind, is called *Involuntary*. The *Power* of Perception is that, which we call the *Understanding*. Perception, which we make the Act of the Understanding, is of three sorts. 1. The Perception of *Ideas* in our Minds. 2. The Perception of the Signification of Signs. 3. The Perception of the Connexion, or Repugnancy, Agreement, or Disagreement, that there is between any of our *Ideas*. All these are attributed to the *Understanding*, or perceptive Power, tho' it be the two latter only that Use allows us to say we understand.

§. 6. THESE Powers of the Mind, *viz.* of *perceiving*, and of *preferring*, are usually called by another Name: And the ordinary way of speaking is, that the *Understanding* and *Will* are two *Faculties* of the Mind; a Word proper enough, if it be used, as all Words should be, so as not to breed any Confusion in Mens Thoughts, by being supposed (as I suspect it has been) to stand for some real Beings in the Soul, that performed those Actions of Understanding and Volition. For, when we say, the *Will* is the commanding and superior Faculty of the Soul; that it is, or is not free; that it determines the inferior Faculties; that it follows the Dictates of the *Understanding*, &c. tho' these, and the like Expressions, by those that carefully attend to their own *Ideas*, and conduct their Thoughts, more by the Evidence of Things, than the Sound of

Will and Under-
standing, two Powers.

of Words, may be understood in a clear and distinct Sense ; yet I suspect, I say, that this way of speaking of *Faculties*, has misled many into a confused Notion of so many distinct Agents in us, which had their several Provinces and Authorities, and did command, obey, and perform several Actions, as so many distinct Beings; which has been no small Occasion of Wrangling, Obscurity, and Uncertainty, in Questions relating to them.

Whence the Ideas of Liberty and Necessity.

§. 7. EVERY one, I think, finds in himself a Power to begin, or forbear, continue, or put an end to several Actions in himself. From the Consideration of the Extent of this Power of the Mind over the Actions of the Man, which every one finds in himself, arise the *Ideas of Liberty and Necessity*.

Liberty, what.

§. 8. ALL the Actions, that we have any *Idea* of, reducing themselves, as has been said, to these two, *viz.* Thinking and Motion, so far as a Man has a Power to think, or not to think ; to move, or not to move, according to the Preference, or Direction of his own Mind, so far is a Man *free*. Wherever any Performance, or Forbearance, are not equally in a Man's Power ; wherever doing, will not equally follow upon the Preference of his Mind directing it, there he is not *free*, tho', perhaps, the Action may be voluntary. So that the *Idea of Liberty*, is the *Idea* of a Power in any Agent to do, or forbear, any particular Action, according to the Determination, or Thought of the Mind, whereby either of them is preferred to the other ; where either of them is not in the Power of the Agent to be produced by him, according to his *Volition*, there he is not at *Liberty*, that Agent is under *Necessity*. So that *Liberty* cannot be, where there is no Thought, no Volition, no Will ; but there may be Thought, there may be Will, there may be Volition, where there is no *Liberty*. A little Consideration of an obvious Instance or two may make this clear.

Supposes the Understanding, and Will.

§. 9. A TENNIS-BALL, whether in Motion, by the stroke of a Racket, or lying still at rest, is not, by any one, taken to be a *free Agent*. If we enquire into the Reason, we should find it is because we conceive not a Tennis-Ball to think, and, consequently, not to have any Volition, or Preference of Motion to Rest,

or *vice versa*; and, therefore, has not *Liberty*, is not a free Agent; but all its both Motion and Rest, come under our *Idea of Necessary*, and are so called. Likewise a Man falling into the Water, (a Bridge breaking under him) has not herein Liberty, is not a free Agent. For, tho' he has Volition, tho' he prefers his not falling, to falling; yet the Forbearance of that Motion not being in his Power, the Stop, or Cessation, of that Motion, follows not upon his Volition; and, therefore, therein he is not *free*. So a Man striking himself, or his Friend, by a convulsive Motion of his Arm, which is not in his Power, by Volition, or the Direction of his Mind, to stop, or forbear, no-body thinks he has, in this, *Liberty*; every one pities him, as acting by Necessity and Constraint.

§. 10. AGAIN, suppose a Man be carried, whilst *Belongs not to fast asleep*, into a Room, where is a Person he *Volition*. longs to see and speak with; and be there locked fast in, beyond his Power to get out; he awakes, and is glad to find himself in so desirable Company, which he stays willingly in, *i.e.* prefers his Stay to going away: I ask, Is not this Stay voluntary? I think no-body will doubt it; and yet being locked fast in, 'tis evident he is not at liberty not to stay, he has not Freedom to be gone. So that *Liberty is not an Idea belonging to Volition*, or preferring; but to the Person having the Power of doing, or forbearing to do, according as the Mind shall chuse, or direct. Our *Idea of Liberty* reaches as far as that Power, and no farther. For wherever Restraint comes to check that Power, or Compulsion, takes away that Indifferency of Ability on either side to act, or to forbear acting; there *Liberty*, and our Notion of it, presently ceases.

§. 11. WE have Instances enough, and often more than enough, in our own Bodies. A Man's Heart beats, and the Blood circulates, which 'tis not in his Power, by any Thought, or Volition, to stop; and, therefore, in respect of these Motions, where Rest depends not on his Choice, nor would follow the Determination of his Mind, if it should prefer it, he is not a *free Agent*. Convulsive Motions agitate his Legs, so that, tho' he *wills* it ever so much, he cannot, by any Power of his Mind, stop their Motion, (as in that odd Disease called *Chorea Sancti viti*) but he

Voluntary opposed to Involuntary, not to Necessary.

is perpetually dancing : He is not at liberty in this Action, but under as much Necessity of moving, as a Stone that falls, or a Tennis-Ball struck with a Racket. On the other side, a Palfy, or the Stocks, hinder his Legs from obeying the Determination of his Mind, if it would thereby transfer his Body to another Place. In all these there is Want of *Freedom*; tho' the sitting still even of a Paralytic, whilst he prefers it to a Removal, is truly voluntary. *Voluntary* then is not opposed to *Necessary*, but to *Involuntary*. For a Man may prefer what he can do, to what he cannot do ; the State he is in, to its Absence, or Change, tho' Necessity has made it in itself unalterable.

§. 12. As it is in the Motions of the Body, so *Liberty, what.* it is in the Thoughts of our Minds : Where any one is such, that we have Power to take it up, or lay it by, according to the Preference of the Mind, there we are *at liberty*. A waking Man being under the Necessity of having some *Ideas* constantly in his Mind, is not at *liberty* to think, or not to think ; no more than he is at *liberty*, whether his Body should touch any other, or no : But whether he will remove his Contemplation from one *Idea* to another, is many times in his Choice ; and then he is, in respect of his *Ideas*, as much at *liberty*, as he is in respect of Bodies he rests on : He can, at Pleasure, remove himself from one to another. But yet some *Ideas* to the Mind, like some Motions to the Body, are such, as in certain Circumstances it cannot avoid, nor obtain their Absence by the utmost Effort it can use. A Man on the Rack is not at *liberty* to lay by the *Idea* of Pain, and divert himself with other Contemplations : And sometimes a boisterous Passion hurries our Thoughts, as a Hurricane does our Bodies, without leaving us the Liberty of thinking on other things, which we would rather chuse. But as soon as the Mind regains the Power to stop, or continue, begin, or forbear, any of these Motions of the Body without, or Thoughts within, according as it thinks fit to prefer either to the other, we then consider the Man as a *free Agent* again.

Necessity, what. *§. 13.* WHEREVER Thought is wholly wanting, or the Power to act, or forbear, according to the Direction of Thought, there *Necessity* takes place. This in an Agent capable of Volition, when the Beginning, or Continuation

nuation of any Action, is contrary to that Preference of his Mind, is called *Compulsion*; when the hindring, or stopping any Action, is contrary to his Volition, it is called *Restraint*. Agents, that have no Thought, no Volition at all, are in every thing *necessary Agents*.

§. 14. If this be so, (as I imagine it is) I leave it to be considered, whether it may not help to put an end to that long agitated, and, I think, unreasonable, because unintelligible Question, *viz. Whether Man's Will be free, or no?* For, if I mistake not, it follows from what I have said, that the Question itself is altogether improper; and it is as insignificant to ask, whether Man's *Will* be free, as to ask, whether his Sleep be swift, or his Virtue square; *Liberty* being as little applicable to the *Will*, as Swiftnes of Motion is to Sleep, or Squarenes to Virtue. Every one would laugh at the Absurdity of such a Question, as either of these; because it is obvious, that the Modifications of Motion belong not to Sleep, nor the Difference of Figure to Virtue: And, when any one well considers it, I think he will as plainly perceive, that *Liberty*, which is but a Power, belongs only to Agents, and cannot be an Attribute, or Modification of the *Will*, which is also but a *Power*.

§. 15. Such is the Difficulty of explaining, and giving clear Notions of Internal Actions by Sounds, that I must here warn my Reader, that *Ordering*, *Directing*, *Choosing*, *Preferring*, &c. which I have made use of, will not distinctly enough express *Volition*, unles he will reflect on what he himself does when he *wills*. For example, *Preferring*, which seems, perhaps, best to express the Act of *Volition*, does it not precisely. For tho' a Man would prefer Flying to Walking, yet who can say he ever *wills* it? *Volition*, 'tis plain, is an Act of the Mind, knowingly exerting that Dominion it takes itself to have over any Part of the Man, by employing it in, or with-holding it from any particular Action. And what is the *Will*, but the Faculty to do this? And is that Faculty any thing more in effect than a Power, the Power of the Mind to determine its Thought, to the producing, continuing, or stopping any Action, as far as it depends on us? For can it be denied, that whatever

*Liberty belongs
not to the Will.*

Agent has a Power to think on its own Actions, and to prefer their Doing, or Omission, either to other, has that Faculty called *Will*? Will then is nothing but such a Power. *Liberty*, on the other side, is the Power a Man has to do, or forbear doing, any particular Action, according as its Doing, or Forbearance, has the actual Preference in the Mind; which is the same thing as to say, according as he himself *wills* it.

Powers belong to Agents. §. 16. 'Tis plain then, that the *Will* is nothing but one Power, or Ability, and *Freedom* another Power, or Ability: So that to ask, whether the *Will has Freedom*, is to ask, whether one Power has another Power, one Ability another Ability; a Question, at first sight, too grossly absurd to make a Dispute, or need an Answer. For who is it that sees not, that *Powers* belong only to *Agents*, and are *Attributes only of Substances, and not of Powers themselves*? So that this way of putting the Question, viz. Whether the *Will be free?* is, in effect, to ask, Whether the *Will* be a Substance, and Agent? or, at least, to suppose it, since Freedom can properly be attributed to nothing else. If Freedom can, with any Propriety of Speech, be applied to Power, it may be attributed to the Power that is in a Man to produce, or forbear producing Motion in the Parts of his Body, by Choice, or Preference; which is that which denominates him free, and is Freedom itself. But if any one should ask, whether Freedom were free, he would be suspected not to understand well what he said; and he would be thought to deserve *Midas's Ears*, who knowing that Rich was a Denomination from the Possession of Riches, should demand whether Riches themselves were rich.

§. 17. HOWEVER, the Name *Faculty*, which Men have given to this Power, called the *Will*, and whereby they have been led into a way of talking of the *Will*, as acting, may, by an Appropriation that disguises its true Sense, serve a little to palliate the Absurdity; yet the *Will*, in truth, signifies nothing but a Power, or Ability, to prefer, or chuse: And when the *Will*, under the Name of a *Faculty*, is considered, as it is, barely as an Ability to do something, the Absurdity, in saying it is free, or not free, will easily discover itself. For if it be reasonable to suppose and talk

talk of *Faculties*, as distinct Beings, that can act, (as we do, when we say the *Will* orders, and the *Will* is free) 'tis fit that we should make a speaking *Faculty*, and a walking *Faculty*, and a dancing *Faculty*, by which those Actions are produced, which are but several Modes of Motion; as well as we make the *Will* and *Understanding* to be *Faculties*, by which the Actions of Chusing and Perceiving are produced, which are but several Modes of Thinking: And we may as properly say, that 'tis the singing *Faculty* sings, and the dancing *Faculty* dances; as that the *Will* chuses, or that the Understanding conceives; or, as is usual, that the *Will* directs the Understanding, or the Understanding obeys, or obeys not the Will: It being altogether as proper and intelligible to say, that the Power of Speaking directs the Power of Singing, or the Power of Singing obeys, or disobeys the Power of Speaking.

§. 18. THIS way of talking, nevertheless, has prevailed, and, as I guess, produced great Confusion. For these being all different Powers in the Mind, or in the Man, to do several Actions, he exerts them as he thinks fit: But the Power to do one Action, is not operated on by the Power of doing another Action. For the Power of Thinking operates not on the Power of Chusing, nor the Power of Chusing on the Power of Thinking; no more than the Power of Dancing operates on the Power of Singing, or the Power of Singing on the Power of Dancing; as any one, who reflects on it, will easily perceive: And yet this is it which we say, when we thus speak, that the *Will operates on the Understanding, or the Understanding on the Will*.

§. 19. I GRANT, that this, or that actual Thought, may be the Occasion of Volition, or exercising the Power a Man has to chuse; or the actual Choice of the Mind, the Cause of actual Thinking on this, or that thing: As the actual Singing of such a Tune, may be the Occasion of dancing such a Dance, and the actual dancing of such a Dance, the Occasion of singing such a Tune. But in all these, it is not one *Power* that operates on another: But it is the Mind that operates, and exerts these Powers; it is the Man that does the Action, it is the Agent that has Power, or is able to do. For *Powers* are Relations, not Agents:

And

And that which has the Power, or not the Power, to operate, is that alone which is, or is not free, and not the Power itself: For Freedom, or not Freedom, can belong to nothing, but what has, or has not, a Power to act.

Liberty belongs not to the Will; §. 20. THE attributing to *Faculties*, that which belonged not to them, has given occasion to this way of talking: But the introducing into Discourses concerning the Mind, with the Name of *Faculties*, a Notion of their operating, has, I suppose, as little advanced our Knowledge in that Part of ourselves, as the great Use and Mention of the like Invention of *Faculties*, in the Operations of the Body, has helped us in the Knowledge of Physic. Not that I deny there are *Faculties*, both in the Body and Mind: They both of them have their *Powers* of operating, else neither the one nor the other could operate. For nothing can operate, that is not able to operate; and that is not able to operate, that has no *Power* to operate. Nor do I deny, that those Words, and the like, are to have their Place in the common Use of Languages, that have made them current. It looks like too much Affectation wholly to lay them by: And Philosophy itself, tho' it likes not a gaudy Dress, yet, when it appears in public, must have so much Complacency, as to be clothed in the ordinary Fashion and Language of the Country, so far as it can consist with Truth and Perspicuity. But the Fault has been, that *Faculties* have been spoken of, and represented, as so many distinct Agents. For it being asked, What it was that digested the Meat in our Stomachs? it was a ready and very satisfactory Answer, to say, that it was the *digestive Faculty*. What was it that made any thing come out of the Body? The *expulsive Faculty*. What moved? The *motive Faculty*. And so in the Mind, the *intellectual Faculty*, or the Understanding, understood; and the *elective Faculty*, or the Will, willed, or commanded: Which is in short to say, That the Ability to digest, digested; and the Ability to move, moved; and the Ability to understand, understood. For *Faculty*, *Ability*, and *Power*, I think, are but different Names of the same Things: Which Ways of speaking, when put into more intelligible Words, will, I think, amount to thus much:

That

That Digestion is performed by something that is able to digest; Motion by something able to move; and Understanding by something able to understand. And, in truth, it would be very strange, if it should be otherwise ; as strange as it would, be for a Man to be free without being able to be free.

§. 21. To return then to the Enquiry about *But to the Agent, or Man.* Liberty, I think *the Question is not proper, whether the Will be free, but whether a Man be free.* Thus, I think,

I. THAT so far as any one can, by the Direction, or Choice of his Mind, preferring the Existence of any Action to the Non-existence of that Action, and, *vice versa*, make it to exist, or not exist, so far he is *free*. For if I can, by a Thought, directing the Motion of my Finger, make it move, when it was at rest, or *vice versa*, 'tis evident, that in respect of that, I am free: And if I can, by a like Thought of my Mind, preferring one to the other, produce either Words, or Silence, I am at liberty to speak, or hold my peace ; and as *far as this Power reaches of acting, or not acting, by the Determination of his own Thought preferring either, so far is a Man free*. For how can we think any one freer, than to have the Power to do what he will? And so far as any one can, by preferring any Action to its not being, or Rest to any Action, produce that Action, or Rest, so far can he do what he will. For such a preferring of Action to its Absence, is the willing of it ; and we can scarce tell how to imagine any *Being* freer, than to be able to do what he *wills*. So that in respect of Actions, within the Reach of such a Power in him, a Man seems as free, as 'tis possible for Freedom to make him.

§. 22. But the inquisitive Mind of Man, willing to shift off from himself, as far as he can, all Thoughts of Guilt, tho' it be by putting himself into a worse State than that of fatal Necessity, is not content with this : Freedom, unless it reaches farther than this, will not serve the turn ; and it passes for a good Plea, that a Man is not free at all, if he be not as free to will, as he is to act what he wills. Concerning a Man's Liberty, there yet therefore is raised this farther Question, *Whether a Man be free to*

*In respect of
Willing, a
Man is not
free.*

to will? Which, I think, is what is meant, when it is disputed, Whether the *Will* be free. And as to that, I imagine,

§. 23. 2. THAT *Willing*, or *Volition*, being an Action, and Freedom consisting in a Power of acting, or not acting, *A Man in respect of Willing, or the Act of Volition, when any Action in his Power is once proposed to his Thoughts, as presently to be done, cannot be free.* The Reason whereof is very manifest: For it being unavoidable, that the Action, depending on his *Will*, should exist, or not exist; and its Existence, or not Existence, following perfectly the Determination and Preference of his Will, he cannot avoid willing the Existence, or not Existence of that Action; it is absolutely necessary that he *will* the one, or the other, *i.e. prefer* the one to the other; since one of them must necessarily follow; and that which does follow, follows by the Choice and Determination of his Mind, that is, by his *Willing* it: For if he did not *will* it, it would not be. So that in respect of the *Act of Willing*, a Man in such a case is not free: Liberty consisting in a Power to act, or not to act; which, in regard of Volition, a Man, upon such a Proposal, has not. For it is unavoidably necessary to prefer the Doing, or Forbearance of an Action in a Man's Power, which is once so proposed to his Thoughts; a Man must necessarily *will* the one or the other of them, upon which Preference, or Volition, the Action, or its Forbearance, certainly follows, and is truly voluntary: But the *Act of Volition*, or preferring one of the two, being that which he cannot avoid, a Man in respect of that *Act of Willing*, is under a Necessity, and so cannot be free; unless Necessity and Freedom can consist together, and a Man can be free and bound at once.

§. 24. THIS then is evident, That in all Proposals of present Action, *A Man is not at liberty to will, or not to will, because he cannot forbear Willing.* Liberty consisting in a Power to act, or to forbear acting, and in that only. For a Man that sits still, is said yet to be at liberty, because he can walk if he *wills* it. But, if a Man, sitting still, has not a Power to remove himself, he is not at liberty. So likewise, a Man falling down a Precipice, tho' in Motion, is not at liberty, because he cannot stop that Motion, if he would. This being so, 'tis plain, that a Man that

is walking, to whom it is proposed to give off walking, is not at liberty, whether he *will* determine himself to walk, or give off walking, or no: He must necessarily prefer one, or the other of them, walking, or not walking; and so it is in regard of all other Actions in our Power, so proposed, which are the far greater Number. For considering the vast Number of voluntary Actions, that succeed one another every Moment, that we are awake, in the Course of our Lives, there are but few of them that are thought on, or propose to the *Will*, 'till the Time they are to be done: And in all such Actions, as I have shewn, the Mind, in respect of *Willing*, has not a Power to act, or not to act, wherein consists Liberty. The Mind in that case has not a Power to forbear *Willing*; it cannot avoid some Determination concerning them, let the Consideration be as short, the Thought as quick as it will; it either leaves the Man in the State he was before Thinking, or changes it; continues the Action, or puts an End to it. Whereby it is manifest, that it orders and directs one, in Preference to, or with Neglect of the other, and thereby either the Continuation, or Change becomes unavoidably voluntary.

§. 25. SINCE then it is plain, that in most Cases a Man is not at Liberty, whether he will *Will*, or no; the next Thing demanded, is, *Whether a Man be at liberty to will which of the two he pleases, Motion, or Rest?* This Question carries the Absurdity of it so manifestly in itself, that one might thereby sufficiently be convinced, that Liberty concerns not the Will. For to ask, Whether a Man be at liberty to will either Motion, or Rest, Speaking, or Silence, which he pleases, is to ask, whether a Man can *will*, what he *wills*, or be pleased with what he is pleased with? A Question, which, I think, needs no Answer; and they, who can make a Question of it, must suppose one Will to determine the Acts of another, and another to determine that; and so on *in infinitum*.

§. 26. To avoid these, and the like Absurdities, nothing can be of greater Use, than to establish in our Minds, determined Ideas of the Things under Consideration, If the *Ideas* of Liberty,

berty and Volition were well fixed in our Understandings, and carried along with us in our Minds, as they ought, thro' all the Questions that are raised about them; I suppose a great Part of the Difficulties that perplex Mens Thoughts, and entangle their Understandings, would be much easier resolved; and we should perccive where the confused Signification of Terms, or where the Nature of the Thing caused the Obscurity.

*§. 27. First, THEN, it is carefully to be remem-
Freedom.*

*Freedom consists in the Dependence of
the Existence, or not Existence, of any Action, upon our Volition of it,
and not in the Dependence of any Action, or its contrary, on our Pre-
ference.* A Man standing on a Cliff, is at Liberty to leap twenty
Yards downwards into the Sea, not because he has a Power to
do the contrary Action, which is to leap twenty Yards upwards,
for that he cannot do; but he is therefore free, because he has
a Power to leap, or not leap. But if a greater Force than his
either holds him fast, or tumbles him down, he is no longer free
in that Case; because the Doing, or Forbearance, of that parti-
cular Action, is no longer in his Power. He that is a close Pri-
soner, in a Room twenty Foot square, being at the North-side
of his Chamber, is at Liberty to walk twenty Foot Southward,
because he can walk, or not walk it; but is not, at the same time,
at Liberty to do the contrary, i.e. to walk twenty Foot North-
ward.

In this then consists Freedom, (*viz.*) in our being able to act,
or not to act, according as we shall chuse, or will.

*§. 28. Secondly, WE must remember, that Vo-
Volition, what.* *Volition, or Willing, is an Act of the Mind direct-
ing its Thought to the Production of any Action, and thereby
exerting its Power to produce it.* To avoid multiplying of
Words, I would crave Leave here, under the Word *Action*, to
comprehend the Forbearance too of any Action proposed; *sit-
ting still, or holding one's peace, when walking, or speaking,* are
proposed, tho' mere Forbearances, requiring as much the Deter-
mination of the *Will*, and being often as weighty in their Con-
sequences, as the contrary Actions, may, on that Consideration,
well

well enough pass for Actions too: But this I say, that I may not be mistaken, if, for Brevity's Sake, I speak thus.

§. 29. Thirdly, THE Will being nothing but a Power in the Mind to direct the operative Faculties of a Man to Motion, or Rest, as far as they depend on such Direction. To the Question, What is it that determines the Will? The true and proper Answer is, the Mind. For that which determines the general Power of directing to this, or that particular Direction, is nothing but the Agent itself, exercising the Power it has that particular Way. If this Answer satisfies not, 'tis plain, the Meaning of the Question, *What determines the Will?* is this, What moves the Mind, in every particular Instance, to determine its general Power of directing to this, or that particular Motion, or Rest? And to this I answer, The Motive for continuing in the same State, or Action, is only the present Satisfaction in it: The Motive to change, is always some *Uneasiness*: Nothing setting us upon the Change of State, or upon any new Action, but some *Uneasiness*. This is the great Motive that works on the Mind to put it upon Action, which, for Shortness sake, we will call *determining of the Will*; which I shall more at large explain.

§. 30. But in the Way to it, it will be necessary to premise, that tho' I have above endeavoured to express the Act of *Volition*, by *chusing*, *preferring*, and the like Terms, that signify *Desire*, as well as *Volition*, for want of other Words to mark that Act of the Mind, whose proper Name is *Willing*, or *Volition*; yet it being a very simple Act, whosoever desires to understand what it is, will better find it, by reflecting on his own Mind, and observing what it does, when it *wills*, than by any Variety of articulate Sounds whatsoever. This Caution of being careful not to be misled by Expressions, that do not enough keep up the Difference between the *Will*, and several Acts of the Mind, that are quite distinct from it, I think the more necessary; because I find the Will often confounded with several of the Affections, especially *Desire*, and one put for the other; and that by Men, who would not willingly be thought not to have had very distinct Notions of

What determines the Will.

Things, and not to have writ very clearly about them. This, I imagine, has been no small Occasion of Obscurity and Mistake in this Matter ; and therefore is, as much as may be, to be avoided. For he that shall turn his Thoughts inwards upon what passes in his Mind, when he *wills*, shall see that the *Will*, or Power of *Volition*, is conversant about nothing, but that particular Determination of the Mind, whereby barely by a Thought, the Mind endeavours to give Rise, Continuation, or Stop, to any Action, which it takes to be in its Power. This well considered, plainly shews, that the *Will* is perfectly distinguished from *Desire*; which, in the very same Action, may have a quite contrary Tendency from that which our *Will* sets us upon. A Man, whom I cannot deny, may oblige me to use Persuasions to another, which, at the same Time I am speaking, I may wish may not prevail on him. In this Case, 'tis plain the *Will* and *Desire* run counter. I will the Action that tends one Way, whilst my *Desire* tends another, and that the direct contrary. A Man, who, by a violent Fit of the Gout in his Limbs, finds a Dozeness in his Head, or a Want of Appetite in his Stomach remov'd, desires to be eas'd too of the Pain of his Feet, or Hands, (for wherever there is Pain, there is a Desire to be rid of it) tho' yet, whilst he apprehends that the Removal of the Pain may translate the noxious Humour to a more vital Part, his *Will* is never determined to any one Action, that may serve to remove this Pain. Whence it is evident, that *Desiring* and *Willing* are two distinct Acts of the Mind; and consequently that the *Will*, which is but the Power of *Volition*, is much more distinct from *Desire*.

Uneasiness determines the Will. §. 31. To return then to the Enquiry, *What is it that determines the Will, in regard to our Actions?* And that, upon second Thoughts, I

am apt to imagine is not, as is generally supposed, the greater Good in View; but some (and for the most part the most pressing) *Uneasiness* a Man is at present under. This is that which successively determines the *Will*, and sets us upon those Actions we perform. This *Uneasiness* we may call, as it is, *Desire*; which is an *Uneasiness* of the Mind, for want of some absent Good. All Pain of the Body, of what sort soever, and

and Disquiet of the Mind, is *Uneasiness*: And with this is always join'd Desire, equal to the Pain, or *Uneasiness* felt, and is scarce distinguishable from it. For *Desire* being nothing but an *Uneasiness* in the want of an absent Good, in Reference to any Pain felt, Ease is that absent Good; and till that Ease be attained, we may call it *Desire*, no body feeling Pain, that he wishes not to be eased of, with a Desire equal to that Pain, and inseparable from it. Besides this Desire of Ease from Pain, there is another of absent, positive Good; and here also the Desire and *Uneasiness* is equal. As much as we desire any absent Good, so much are we in Pain for it. But here all absent Good does not, according to the Greatness it has, or is acknowledged to have, cause Pain equal to that Greatness; as all Pain causes Desire equal to itself; because the Absence of Good is not always a Pain, as the Presence of Pain is: And, therefore, absent Good may be looked on, and considered without *Desire*. But so much as there is any where of *Desire*, so much there is of *Uneasiness*.

§. 32. THAT *Desire* is a State of *Uneasiness*, *Desire is Uneasiness*. every one who reflects on himself will quickly find. Who is there, that has not felt in *Desire*, what the Wise Man says of Hope, (which is not much different from it) that it being *deferr'd*, makes the Heart sick? And that still proportionable to the Greatness of the *Desire*; which sometimes raises the *Uneasiness* to that Pitch, that it makes People cry out, *Give me Children*, give me the Thing desired, or *I die*. Life itself, and all its Enjoyments, as a Burden, cannot be borne under the lasting and unremoved Pressure of such an *Uneasiness*.

§. 33. Good and Evil, present and absent, 'tis true, work upon the Mind: But that which immediately determines the Will, from time to time, to every voluntary Action, is the *Uneasiness* of *Desire*, fixed on some absent Good; either negative, as Indolence to one in Pain; or positive, as Enjoyment of Pleasure. That it is this *Uneasiness*, that determines the *Will*, to the successive voluntary Actions, whereof the greatest Part of our Lives is made up, and by which we are conducted thro' different Courses

*The Uneasiness
of Desire de-
termines the
Will.*

Courses to different Ends; I shall endeavour to shew, both from Experience, and the Reason of the Thing.

This the Spring of Action. §. 34. WHEN a Man is perfectly content with the State he is in, which is, when he is perfectly

ly without any *Uneasiness*, what Industry, what Action, what *Will* is there left, but to continue in it? Of this every Man's Observation will satisfy him. And thus we see our All-wise Maker, suitable to our Constitution and Frame, and knowing what it is that determines the *Will*, has put into Man the *Uneasiness* of Hunger and Thirst, and other natural Desires, that return at their Seasons, to move and determine their *Wills*, for the Preservation of themselves, and the Continuation of their Species. For, I think, we may conclude, that if the bare Contemplation of these good Ends, to which we are carried by these several *Uneasinesses*, had been sufficient to determine the *Will*, and set us on work, we should have had none of these natural Pains, and perhaps, in this World, little or no Pain at all. *It is better to marry than to burn*, says St. Paul; where we may see what it is that chiefly drives Men into the Enjoyments of a conjugal Life. A little Burning felt, pushes us more powerfully, than greater Pleasures in Prospect draw, or allure.

The greatest positive Good determines not the Will, but Uneasiness. §. 35. It seems so established and settled a Maxim, by the general Consent of all Mankind, that Good, the greater Good, determines the Will, that I do not at all wonder, that when I

first published my Thoughts on this Subject, I took it for granted; and, I imagine, that by a great many I shall be thought more excusable, for having then done so, than that now I have ventured to recede from so received an Opinion. But yet, upon a stricter Enquiry, I am forced to conclude, that *Good*, the *greater Good*, tho' apprehended and acknowledged to be so, does not determine the *Will*, until our Desire, raised proportionably to it, makes us *uneasy* in the Want of it. Convince a Man never so much, that Plenty has its Advantages over Poverty; make him see and own, that the handsome Conveniences of Life are better than nasty Penury; yet, as long as he is content with the latter, and finds no *Uneasiness* in it, he moves

moves not: His *Will* never is determined to any Action, that shall bring him out of it. Let a Man be ever so well persuaded of the Advantages of Virtue, that it is as necessary to a Man, who has any great Aims in this World, or Hopes in the next, as Food to Life; yet, till he *hungers and thirsts after Righteousness*, till he feels an *Uneasiness* in the Want of it, his *Will* will not be determined to any Action in pursuit of this confessed, greater Good; but any other *Uneasinesses* he feels in himself shall take place, and carry his *Will* to other Actions. On the other side, let a Drunkard see, that his Health decays, his Estate wastes, Discredit and Diseases, and the Want of all Things, even of his beloved Drink, attends him in the Course he follows; yet the Returns of *Uneasiness* to miss his Companions, the habitual Thirst after his Cups, at the usual time, drives him to the Tavern, tho' he has in his View the Loss of Health and Plenty, and, perhaps, of the Joys of another Life: The least of which is no inconsiderable Good, but such as he confesses, is far greater than the tickling of his Palate with a Glass of Wine, or the idle Chat of a soaking Club. 'Tis not for Want of viewing the greater Good; for he sees, and acknowledges it; and, in the Intervals of his drinking Hours, will take Resolutions to pursue the greater Good; but when the *Uneasiness* to miss his accustomed Delight returns, the greater, acknowledged Good, loses its Hold, and the present *Uneasiness* determines the *Will* to the accustomed Action; which thereby gets stronger Footing to prevail against the next Occasion, tho' he at the same time makes secret Promises to himself, that he will do so no more; this is the last time he will act against the Attainment of those greater Goods. And thus he is, from time to time, in the State of that unhappy Complainant, *Video meliora proboque, Deteriora sequor:* Which Sentence allowed for true, and made good by constant Experience, may this, and, possibly, no other way, be easily made intelligible.

§. 36. If we enquire into the Reason of what Experience makes so evident in Fact, and examine why 'tis *Uneasiness* alone operates on the *Will*, and determines in its Choice, we shall find, that we being capable but of one Determination

Because the Removal of Uneasiness is the first Step to Happiness.

nation of the *Will* to one Action at once ; the present *Uneasiness*, that we are under, does naturally determine the *Will*, in order to that Happiness which we all aim at in all our Actions : Forasmuch as whilst we are under any *Uneasiness*, we cannot apprehend ourselves happy, or in the way to it. Pain and *Uneasiness* being, by every one, concluded and felt to be inconsistent with Happiness ; spoiling the Relish even of those good things which we have : A little Pain serving to mar all the Pleasure we rejoiced in. And, therefore, that which of course determines the Choice of our *Will* to the next Action, will always be the removing of Pain, as long as we have any left, as the first and necessary Step towards Happiness.

Because Uneasiness alone is present. §. 37. ANOTHER Reason, why 'tis *Uneasiness* alone determines the Will, may be this; Because that alone is present, and 'tis against the

Nature of Things, that what is absent should operate, where it is not. It may be said, that absent Good may, by Contemplation, be brought home to the Mind, and made present. The *Idea* of it, indeed, may be in the Mind, and view'd as present there ; but nothing will be in the Mind as a present Good, able to counter-balance the Removal of any *Uneasiness* which we are under, 'till it raises our Desire ; and the *Uneasiness* of that has the Prevalency in determining the *Will*. 'Till then, the *Idea* in the Mind, of whatever Good, is there only like other *Ideas*, the Object of bare unactive Speculation ; but operates not on the *Will*, nor sets us on work : The Reason whereof I shall shew by and by. How many are to be found, that have had lively Representations set before their Minds of the unspeakable Joys of Heaven, which they acknowledge both possible and probable too, who yet would be content to take up with their Happiness here ? And so the prevailing *Uneasinesses* of their Desires, let loose after the Enjoyments of this Life, take their turns in the determining their *Wills* ; and all that while they take not one step, are not one jot moved, towards the good things of another Life, considered as ever so great.

Because all who allow the §. 38. WERE the *Will* determin'd by the Views of Good, as it appears, in Contemplation, greater,

er, or less to the Understanding, which is the State of all absent Good, and that which in the received Opinion the *Will* is supposed to move

*Joys of Heaven
possible, pursue
them not.*

to, and to be moved by, I do not see how it could ever get loose from the infinite, eternal Joys of Heaven, once proposed and considered as possible. For all absent Good, by which alone, barely proposed, and coming in view, the *Will* is thought to be determin'd, and so to set us on Action, being only possible, but not infallibly certain ; 'tis unavoidable, that the infinitely greater, possible Good should regularly and constantly determine the *Will* in all the successive Actions it directs : And then we should keep constantly and steadily in our Course towards Heaven, without ever standing still, or directing our Actions to any other End. The eternal Condition of a future State infinitely outweighing the Expectation of Riches, or Honour, or any other worldly Pleasure, which we can propose to ourselves, tho' we should grant these the more probable to be attain'd. For nothing future is yet in possession, and so the Expectation, even of these, may deceive us. If it were so, that the greater Good in view determines the *Will*, so great a Good once propos'd could not but seize the *Will*, and hold it fast to the Pursuit of this infinitely greatest Good, without ever letting it go again : For the *Will* having a Power over, and directing the Thoughts, as well as other Actions, would, if it were so, hold the Contemplation of the Mind fixed to that Good.

THIS would be the State of the Mind, and regular Tendency of the *Will* in all its Determinations, were it determined by that which is consider'd, and in view of the greater Good ; But any great Uneasiness is never neglect-ed.
but that it is not so, is visible in Experience : The infinitely greatest, confessed Good being often neglected, to satisfy the successive *Uneasiness* of our Desires pursuing Trifles. But tho' the greatest allowed, even everlasting, unspeakable Good, which has sometimes moved and affected the Mind, does not stedfastly hold the *Will*, yet we see any very great and prevailing *Uneasiness*, having once laid hold on the *Will*, lets it not go : By which we may be convinced, what it is that determines the *Will*. Thus any vehement

hement Pain of the Body, the ungovernable Passion of a Man violently in Love, or the impatient Desire of Revenge, keeps the *Will* steady and intent : And the *Will*, thus determined, never lets the Understanding lay by the Object, but all the Thoughts of the Mind, and Powers of the Body, are uninterruptedly employed that way, by the Determinations of the *Will*, influenced by that topping *Uneasiness*, as long as it lasts; whereby it seems to me evident, that the *Will*, or Power, of setting us upon one Action in preference to all others, is determined in us by *Uneasiness*. And whether this be not so, I desire every one to observe in himself.

*Desire accom-
panies all Un-
easiness.*

§. 39. I HAVE hitherto chiefly instanced in the *Uneasiness* of *Desire*, as that which determines the *Will*: Because that is the chief, and most sensible;

and the *Will* seldom orders any Action, nor is there any voluntary Action performed, without some *Desire* accompanying it ; which, I think, is the Reason why the *Will* and *Desire* are so often confounded. But yet we are not to look upon the *Uneasiness*, which makes up, or, at least, accompanies most of the other Passions, as wholly excluded in the Case. *Aversion*, *Fear*, *Anger*, *Envy*, *Shame*, &c. have each their *Uneasiness* too, and thereby influence the *Will*. These Passions are scarce any of them in Life and Practice, simple and alone, and wholly unmixed with others ; tho' usually in Discourse and Contemplation, that carries the Name, which operates strongest, and appears most in the present State of the Mind. Nay, there is, I think, scarce any of the Passions to be found without *Desire* join'd with it. I am sure, wherever there is *Uneasiness*, there is *Desire* : For we constantly desire Happiness ; and whatever we feel of *Uneasiness*, so much, 'tis certain, we want of Happiness ; even in our own Opinion, let our State and Condition otherwise be what it will. Besides, the present Moment not being our Eternity, whatever our Enjoyment be, we look beyond the present, and *Desire* goes with our Foresight, and that still carries the *Will* with it. So that even in Joy itself, that which keeps up the Action, whereon the Enjoyment depends, is the *Desire* to continue it, and Fear to lose it : And whenever a greater *Uneasiness*

ness, than that takes place in the Mind, the *Will* presently is by that determined to some new Action, and the present Delight neglected.

§. 40. But we being in this World beset with sundry *Uneasinesses*, distracted with different *Desires*, the next Enquiry naturally will be, which of them has the Precedency, in determining the *Will* to the next Action? And to that the Answer is, That ordinarily, which is the most pressing of those that are judged capable of being then removed. For the *Will*, being the Power of directing our operative Faculties to some Action, for some End, cannot, at any time, be moved towards what is judged at that Time unattainable: That would be to suppose an intelligent Being, designedly, to act for an End, only to lose its Labour: For so it is to act for what is judged not attainable; and, therefore, very great *Uneasinesses* move not the *Will*, when they are judg'd not capable of a Cure: They, in that Case, put us not upon Endeavours. But these set a-part, the most important and urgent *Uneasiness* we at that Time feel, is that, which ordinarily determines the *Will* successively, in that Train of voluntary Actions, which makes up our Lives. The greatest present *Uneasiness* is the Spur to Action, that is constantly felt, and, for the most part, determines the *Will* in its Choice of the next Action. For this we must carry along with us, that the proper and only Object of the *Will* is some Action of our's, and nothing else. For we producing nothing, by our willing it, but some Action in our Power, 'tis there the *Will* terminates, and reaches no farther.

§. 41. If it be farther ask'd, what 'tis moves *All desire Happiness.* *Desire?* I answer, Happiness, and that alone.

Happiness and *Misery* are the Names of two Extreams, the utmost Bounds whereof we know not; 'tis what *Eye hath not seen, Ear hath not heard, nor hath it entered into the Heart of Man to conceive.* But of some Degrees of both, we have very lively Impressions, made by several Instances of Delight and Joy, on the one Side, and Torment and Sorrow on the other; which, for Shortness sake, I shall comprehend under the Names of Pleasure and Pain; there being Pleasure and Pain of the Mind, as well as

The most pressing Uneasiness naturally determines the Will.

the Body : *With him is Fulness of Joy and Pleasure for evermore.* Or, to speak truly, they are all of the Mind ; tho' some have their Rise in the Mind, from Thought, others in the Body from certain Modifications of Motion.

Happiness, §. 42. HAPPINESS then, in its full Extent, is
what. the utmost Pleasure we are capable of, and *Mis-*

sery the utmost Pain : and the lowest Degree of what can be called *Happiness*, is so much Ease from all Pain, and so much present Pleasure, as without which any one cannot be content. Now, because Pleasure and Pain are produced in us, by the Operation of certain Objects, either on our Minds; or our Bodies, and in different Degrees : Therefore, what has an Aptness to produce Pleasure in us, is that we call *Good*; and what is apt to produce Pain in us, we call *Evil*, for no other Reason, but for its Aptness to produce Pleasure and Pain in us, wherein consists our *Happiness* and *Misery*. Farther, tho' what is apt to produce any Degree of Pleasure, be in itself *Good*; and what is apt to produce any Degree of Pain, be *Evil*; yet it often happens, that we do not call it so, when it comes in Competition with a greater of its Sort ; because, when they come in Competition, the Degrees also of Pleasure and Pain have justly a Preference. So that, if we rightly estimate what we call *Good* and *Evil*, we shall find it lies much in Comparison : For the Cause of every less Degree of Pain, as well as every greater Degree of Pleasure, has the Nature of *Good*, and *vice versa*.

*What Good is
desired, what
not.*

§. 43. Tho' this be that which is called *Good* and *Evil*; and all Good be the proper Object of *Desire* in general ; yet all Good, even seen, and confessed to be so, does not necessarily move e-

very particular Man's *Desire* ; but only that Part, or so much of it, as is considered, and taken to make a necessary Part of his *Happiness*. All other Good, however great in Reality, or Appearance, excites not a Man's *Desires*, who looks not on it to make a Part of that *Happiness*, wherewith he, in his present Thoughts, can satisfy himself. *Happiness*, under this View, every one constantly pursues, and *desires* what makes any Part of it : Other Things, acknowledged to be *Good*, he can look upon

without

without *Desire*, pass by, and be content without. There is no Body, I think, so senseless, as to deny, that there is Pleasure in Knowledge : And, for the Pleasures of Sense, they have too many Followers to let it be questioned, whether Men are taken with them, or no. Now, let one Man place his Satisfaction in sensual Pleasures, another in the Delight of Knowledge : Tho' each of them cannot but confess, there is great Pleasure in what the other pursues ; yet neither of them making the other's Delight a Part of his Happiness, their *Desires* are not moved, but each is satisfied, without what the other enjoys, and so his Will is not determined to the Pursuit of it. But yet, as soon as the studious Man's Hunger and Thirst makes him *uneasy*, he, whose *Will* was never determined to any Pursuit of good Cheap, poignant Sauces, delicious Wine by the pleasant Taste he has found in them, is, by the Uneasiness of Hunger, and Thirst, presently determined to Eating and Drinking ; tho' possibly, with great Indifferency, what wholesome Food comes in his way. And, on the other side, the Epicure buckles to Study, when Shame, or the Desire to recommend himself to his Mistress, shall make him *uneasy* in the Want of any Sort of Knowledge. Thus, how much forever Men are in earnest, and constant in Pursuit of Happiness, yet they may have a clear View of Good, great and confessed Good, without being concerned for it, or moved by it, if they think they can make up their Happiness without it. Tho' as to Pain, that they are always concern'd for ; they can feel no *Uneasiness* without being moved. And, therefore, being *uneasy* in the Want of whatever is judged necessary to their Happiness, as soon as any Good appears to make a Part of their Portion of Happiness, they begin to *desire* it.

§. 44. THIS, I think, any one may observe in himself, and others, that the *greater visible Good* does not always raise Mens Desires, in Proportion to the Greatest, it appears, and is acknowledg'd to have : Tho' every little Trouble moves us, and sets us on Work to get rid of it. The Reason whereof is evident from the Nature of our *Happiness* and *Misery* itself. All present Pain, whatever it be, makes a Part of our present *Misery* : But all absent Good does not,

at any Time, make a necessary Part of our present *Happiness*, nor the Absence of it make a Part of our *Misery*: If it did, we should be constantly and infinitely miserable; there being infinite Degrees of Happiness, which are not in our Possession. All *Uneasiness*, therefore, being removed; a moderate Portion of Good serves at present to content Men; and some few Degrees of Pleasure, in a Succession of ordinary Enjoyments, make up a Happiness, wherein they can be satisfied. If this were not so, there could be no room for those indifferent and visible trifling Actions, to which our *Wills* are so often determined, and wherein we voluntarily waste so much of our Lives; which Remissness could by no means consist with a constant Determination of *Will*, or *Desire* to the greatest apparent Good. That this is so, I think, few People need go far from Home to be convinced. And indeed, in this Life, there are not many, whose Happiness reaches so far, as to afford them a constant Train of moderate, mean Pleasures, without any Mixture of *Uneasiness*; and yet they could be content to stay here for ever: Tho' they cannot deny, but that it is possible there may be a State of eternal, durable Joys, after this Life, far surpassing all the Good that is to be found here. Nay, they cannot but see, that it is more possible, than the Attainment and Continuation of that Pittance of Honour, Riches, or Pleasure, which they pursue, and for which they neglect that eternal State: But yet, in full View of this Difference, satisfied of the Possibility of a perfect, secure, and lasting Happiness in a future State, and under a clear Conviction, that it is not to be had here, whilst they bound their Happiness within some little Enjoyment, or Aim of this Life, and exclude the Joys of Heaven from making any necessary Part of it; their Desires are not moved by this greater apparent Good, nor their *Wills* determin'd to any Action, or Endeavour for its Attainment.

*Why, not being
desired, it
moves not the
Will.*

§. 45. THE ordinary Necessities of our Lives fill a great Part of them with the *Uneasiness* of *Hunger*, *Thirst*, *Heat*, *Cold*, *Weariness* with *Labour*, and *Sleepiness*, in their constant Returns, &c. To which, if, besides accidental Harms, we add the *fanta-*
stical

stical *Uneasiness* (as Itch after *Honour*, *Power*, or *Riches*, &c.) which acquired Habits, by Fashion, Example, and Education, have settled in us, and a thousand other irregular Desires, which Custom has made natural to us; we shall find that a very little Part of our Life is so vacant from these *Uneasinesses*, as to leave us free to the Attraction of remoter, absent Good. We are seldom at Ease, and free enough from the Solicitation of our natural, or adapted Desires; but to a constant Succession of *Uneasinesses*, out of that Stock, which natural Wants, or acquired Habits, have heaped up, take the *Will* in their Turns: And no sooner is one Action dispatch'd, which, by such a Determination of the *Will*, we are set upon, but another *Uneasiness* is ready to set us on work. For the removing of the Pains we feel, and are at present pressed with, being the getting out of Misery, and consequently the first Thing to be done, in order to Happiness, absent Good, tho' thought on, confessed, and appearing to be good, not making any Part of this Unhappiness in its Absence, is jostled out, to make Way for the Removal of those *Uneasinesses* we feel; 'till due, and repeated Contemplation has brought it nearer to our Mind, given some Relish of it, and raised in us some Desire: Which then, beginning to make a Part of our present *Uneasiness*, stands upon fair Terms with the rest, to be satisfied; and so, according to its Greatness and Pressure, comes in its Turn to determine the *Will*.

§. 46. AND thus, by a due Consideration, and examining any Good proposed, it is in our Power to raise our Desires, in a due Proportion to the Value of that Good, whereby, in its Turn, and Place, it may come to work upon the *Will*, and be pursued. For Good, tho' appearing, and allowed ever so great, yet till it has raised Desires in our Minds, and thereby made us *uneasy* in its Want, it reaches not our *Wills*; we are not within the Sphere of its Activity; our *Wills* being under the Determination only of those *Uneasinesses*, which are present to us, which (whilst we have any) are always soliciting, and ready at hand to give the *Will* its next Determination. The balancing, when there is any in the Mind, being only which Desire shall be next satisfied, which *Uneasiness* first

Due Consideration raises Desire.

first removed. Whereby it comes to pass, that, as long as any *Uneasiness*, any Desire remains in our Minds, there is no room for *Good*, barely as such, to come at the *Will*, or at all to determine it. Because, as has been said, the first Step, in our Endeavours after Happiness, being to get wholly out of the Confines of Misery, and to feel no Part of it, the *Will* can be at Leisure for nothing else, 'till every *Uneasiness* we feel, be perfectly removed: Which, in the Multitude of Wants and Desires, we are beset with in this imperfect State, we are not like to be ever freed from in this World.

The Power, to suspend the Prosecution of any Desire, makes Way for Consideration.

§. 47. THERE being in us a great many *Uneasinesses*, always soliciting, and ready to determine the *Will*, it is natural, as I have said, that the greatest and most pressing should determine the *Will* to the next Action; and so it does, for the most Part, but not always. For the Mind having, in most Cases, as is evident in Experience, a Power to *suspend* the Execution and Satisfaction of any of its Desires, and so all, one after another, is at liberty to consider the Objects of them; examine them on all Sides, and weigh them with others. In this lies the Liberty Man has; and from the not using of it right, comes all that Variety of Mistakes, Errors, and Faults, which we run into, in the Conduct of our Lives, and our Endeavours after Happiness; whilst we precipitate the Determination of our *Wills*, and engage too soon before due *Examination*. To prevent this, we have a Power to *suspend* the Prosecution of this, or that Desire, as every one daily may experiment in himself. This seems to me the Source of all Liberty; in this seems to consist that which is (as I think improperly) called *Free-Will*. For, during this *Suspension* of any Desire, before the *Will* be determined to Action, and the Action (which follows that Determination) done, we have Opportunity to examine, view, and judge of the Good, or Evil of what we are going to do; and when, upon due *Examination*, we have judg'd, we have done our Duty, all that we can, or ought to do, in pursuit of our Happiness; and 'tis not a Fault, but a Perfection of our Nature, to desire,

desire, will, and act, according to the last Result of a fair Examination.

§. 48. THIS is so far from being a Restraint, or Diminution of Freedom, that it is the very Improvement and Benefit of it; 'tis not an Abridgment, 'tis the End and Use of our *Liberty*: And the farther we are removed from such a Determination, the nearer we are to Misery and Slavery. A perfect Indifferency in the Mind, not determinable by its last Judgment of the Good, or Evil, that is thought to attend its Choice, would be so far from being Advantage and Excellency of an intellectual Nature, that it would be as great an Imperfection, as the Want of Indifferency to act, or not to act, till determined by the *Will*, would be an Imperfection on the other Side. A Man is at Liberty to lift up his Hand to his Head, or let it rest quiet: He is perfectly indifferent in either; and it would be an Imperfection in him, if he wanted that Power, if he were deprived of that Indifferency. But it would be as great an Imperfection, if he had the same Indifferency, whether he would prefer the lifting up his Hand, or its remaining in Rest, when it would save his Head, or Eyes from a Blow he sees coming: 'Tis as much a Perfection, that Desire, or the Power of Preferring, should be determined by Good, as that the Power of acting should be determined by the *Will*; and the certainer such Determination is, the greater is the Perfection. Nay, were we determined by any Thing, but the last Result of our own Minds, judging of the Good, or Evil of any Action, we were not free. The very End of our Freedom being, that we may attain the Good we chuse. And, therefore, every Man is put under a Necessity, by his Constitution, as an intelligent Being, to be determined in *willing*, by his own Thought and Judgment, what is best for him to do; else he would be under the Determination of some other than himself, which is want of *Liberty*. And to deny that a Man's *Will*, in every Determination, follows his own Judgment, is to say, that a Man *wills* and acts for an End, that he would not have, at the Time that he *wills*, and acts for it: For, if he prefers it in his present Thoughts before any

To be determined by our own Judgment, is no Restraint to Liberty.

any other, 'tis plain, he then thinks better of it, and would have it before any other ; unless he can have, or not have it ; *will*, and not will it at the same time ; a Contradiction too manifest to be admitted !

The freest Agents are so determined. §. 49. IF we look upon those *superior Beings* above us, who enjoy perfect Happiness, we shall have Reason to judge, that they are more steadily determined in their *Choice of Good*, than we ; and yet we have no Reason to think they are less happy, or less free than we are. And if it were fit, for such poor finite Creatures as we are, to pronounce what infinite Wisdom and Goodness could do, I think we might say, that God Himself cannot chuse what is not good ; the Freedom of the Almighty hinders not His being determined by what is best.

A constant Determination to a Pursuit of Happiness, no Abridgment of Liberty.

§. 50. BUT, to give a right View of this mistaken Part of Liberty ; let me ask, Would any one be a Changeling, because he is less determined by wise Considerations, than a wise Man ? Is it worth the Name of Freedom, to be at liberty to play the Fool, and draw Shame and Misery upon a Man's self ? If to break loose from the Conduit of Reason, and to want that Restraint of Examination and Judgment, which keeps us from Chusing, or Doing the Worse, be *Liberty*, true *Liberty*, Madmen and Fools are the only Freemen : But yet, I think, no body would chuse to be mad for the sake of such *Liberty*, but he that is mad already. The constant Desire of Happiness, and the Constraint it puts upon us to act for it, no body, I think, accounts an Abridgment of *Liberty*, or at least an Abridgment of *Liberty* to be complained of. God Almighty Himself is under the Necessity of being happy ; and the more any intelligent Being is so, the nearer is its Approach to infinite Perfection and Happiness. That in this State of Ignorance we short-sighted Creatures might not mistake true Felicity, we are endowed with a Power to suspend any particular Desire, and keep it from determining the *Will*, and engaging us in Action. This is *standing still*, where we are not sufficiently assured of the Way : Examination, is *consulting a Guide*. The Determination of the *Will*,

Will, upon Enquiry, is following the Direction of that Guide: And he, that has a Power to act, or not to act, according as such Determination directs, is a free Agent; such Determination abridges not that Power wherein Liberty consists. He that has his Chains Knocked off, and the Prison-Doors set open to him, is perfectly at *Liberty*, because he may either go, or stay, as he best likes; tho' his Preference be determined to stay, by the Darkness of the Night, or Illness of the Weather, or want of other Lodging. He ceases not to be free, tho' the Desire of some Convenience to be had there, absolutely determines his Preference, and makes him stay in his Prison.

§. 51. As therefore, the highest Perfection of intellectual Nature, lies in a careful and constant Pursuit of true and solid Happiness; so the Care of ourselves, that we mistake not imaginary for real Happiness, is the necessary Foundation of our *Liberty*. The stronger Ties we have to an unalterable Pursuit of Happiness in general, which is our greatest Good, and which, as such, our Desires always follow, the more are we free from any necessary Determination of our *Will* to any particular Action, and from a necessary Compliance with our Desire, set upon any particular, and then appearing, preferable Good, 'till we have duly examined, whether it has a Tendency to, or be inconsistent with our real Happiness: And, therefore, 'till we are as much informed upon this Enquiry, as the Weight of the Matter, and the Nature of the Case demands; we are, by the Necessity of preferring and pursuing true Happiness, as our greatest Good, obliged to suspend the Satisfaction of our Desire, in particular Cases.

The Necessity of pursuing true Happiness, the Foundation of all Liberty.

§. 52. This is the Hinge, on which turns the *Reason of Liberty* of intellectual Beings, in their constant Endeavours after, and a steady Prosecution of true Felicity, that they can *suspend* this Prosecution, in particular Cases, 'till they have looked before them, and inform'd themselves, whether that particular Thing, which is then proposed, or desired, lie in their Way to their main End, and make a real Part of that which is their greatest Good; for the Inclination and Tendency of their

Nature to Happiness, is an Obligation and Motive to them, to take care not to mistake, or miss it ; and so necessarily puts them upon Caution, Deliberation, and Wariness, in the Direction of their particular Actions, which are the Means to obtain it. Whatever Necessity determines to the Pursuit of real Bliss, the same Necessity, with the same Force, establishes *Suspence*, *Deliberation*, and Scrutiny of each successive Desire, whether the Satisfaction of it does not interfere with our true Happiness, and mislead us from it. This, as seems to me, is the great Privilege of finite, intellectual Beings ; and I desire it may be well considered, whether the great Inlet, and Exercise of all the *Liberty* Men have, are capable of, or can be useful to them, and that whereon depends the Turn of their Actions, does not lie in this, that they can *suspend* their Desires, and stop them from determining their *Wills* to any Action, till they have duly and fairly *examined* the Good and Evil of it, as far forth as the Weight of the Thing requires. This we are able to do; and when we have done it, we have done our Duty, and all that is in our Power ; and indeed all that needs. For, since the *Will* supposes Knowledge, to guide its Choice, all that we can do, is to hold our *Wills* undetermined, till we have *examined* the Good, and Evil, of what we desire. What follows after that, follows in a Chain of Consequences, linked one to another, all depending on the last Determination of the Judgment ; which, whether it shall be, upon a hasty and precipitate View, or upon a due and mature *Examination*, is in our Power : Experience shewing us, that, in most Cases, we are able to suspend the present Satisfaction of any Desire.

Government of our Passions, the right Improvement of Liberty. §. 53. BUT if any extreme Disturbance (as sometimes it happens) possesses our whole Mind, as when the Pain of the Rack, an impetuous *Uneasiness*, as of Love, Anger, or any other violent Passion, running away with us, allows us not the Liberty of Thought, and we are not Masters enough of our own Minds, to consider thoroughly, and examine fairly ; God, who knows our Frailty, pities our Weakness, and requires of us no more than we are able to do, and sees what was, and what was not in our

our Power, will judge as a kind and merciful Father. But the Forbearance of a too hasty Compliance with our Desires, the Moderation and Restraint of our Passions, so that our Understandings may be free to examine, and Reason unbiased give its Judgment, being that, whereon a right Direction of our Conduct to true Happiness depends ; 'tis in this we should employ our chief Care and Endeavours. In this we should take pains to suit the Relish of our Minds to the true, intrinsic Good, or Ill, that is in Things, and not permit an allowed, or supposed, possible, great, and weighty Good, to slip out of our Thoughts, without leaving any Relish, any Desire of itself there, till by a due Consideration of its true Worth, we have formed Appetites in our Minds suitable to it, and made ourselves uneasy in the Want of it, or in the Fear of losing it. And how much this is in every one's Power, by making Resolutions to himself, such as he may keep, is easy for every one to try. Nor let any one say, he cannot govern his Passions, nor hinder them from breaking out, and carrying him into Action ; for what he can do before a Prince, or a great Man, he can do alone, or in the Presence of God, if he will.

§. 54. From what has been said, it is easy to give account, how it comes to pass, that tho' all Men desire Happiness, yet their *Wills carry them so contrarily*, and consequently some of them to what is Evil. And to this I say, that the various and contrary Choices, that Men make in the World, do not argue that they do not all pursue Good ; but that the same Thing is not good to every Man alike. This Variety of Pursuit shews, that every one does not place his Happiness in the same Thing, or chuse the same Way to it. Were all the Concerns of Men terminated in this Life, why one followed Study and Knowledge, and another Hawking and Hunting ; why one chose Luxury and Debauchery, and another Sobriety and Riches ; would not be, because every one of these did not aim at his own Happiness, but because their *Happiness was placed in different Things.* And, therefore, it was a right Answer of the Physician to his Patient, that had sore Eyes : *If you have more Pleasure in the Taste of Wine, than in the Use*

*How Men come
to pursue differ-
ent Counsels.*

of your Sight, Wine is good for you; but if the Pleasure of Seeing be greater to you than that of Drinking, Wine is naught.

§. 55. THE Mind has a different Relish, as well as the Palate; and you will as fruitlessly endeavour to delight all Men with Riches, or Glory (which yet some Men place their Happiness in) as you would to satisfy all Men's Hunger with Cheese, or Lobsters; which, tho' very agreeable and delicious Fare to some, are to others extremely nauseous and offensive: And many People would, with Reason, prefer the Griping of an hungry Belly to those Dishes, which are a Feast to others. Hence it was, I think, that the Philosophers of old did in vain enquire, whether *Summum Bonum* consisted in Riches, or bodily Delights, or Virtue, or Contemplation. And they might have as reasonably disputed, whether the best Relish were to be found in Apples, Plumbs, or Nuts; and have divided themselves into Sects upon it. For as pleasant Tastes depend not on the Things themselves, but their Agreeableness to this, or that particular Palate, wherin there is great Variety; so the greatest Happiness consists in the having those things, which produce the greatest Pleasure, and in the Absence of those, which cause any Disturbance, any Pain. Now these, to different Men, are very different Things. If, therefore, Men in this Life only have Hope, if in this Life they can only enjoy, 'tis not strange, nor unreasonable, that they should seek their Happiness, by avoiding all things that disease them here, and by pursuing all that delight them; wherein it will be no wonder, to find Variety, and Difference. For if there be no Prospect beyond the Grave, the Inference is certainly right, *Let us eat and drink, let us enjoy what we delight in, for To-morrow we shall die.* This, I think, may serve to shew us the Reason, why, tho' all Mens Desires tend to Happiness, yet they are not moved by the same Object. Men may chuse different Things, and yet all chuse right; supposing them only like a Company of poor Insects, whereof some are Bees, delighted with Flowers and their Sweetness; others Beetles, delighted with other kind of Viands; which, having enjoyed for a Season, they should cease to be, and exist no more for ever.

§. 56. THESE

§. 56. THESE Things, duly weigh'd, will give us, as I think, a clear View into the State of Human Liberty. Liberty, 'tis plain, consists in a Power to do, or not to do ; to do, or forbear doing, as we *will*. This cannot be denied. But this seeming to comprehend only the Actions of a Man consecutive to Volition, it is farther enquired, whether we be at liberty to will, or not. And to this it hath been answered, That in most Cases a Man is not at liberty to forbear the Act of Volition ; he must exert an Act of his *Will*, whereby the Action proposed is made to exist, or not to exist. But yet there is a Case wherein a Man is at liberty in respect of *Willing*, and that is the chusing of a remote Good as an End to be pursued. Here a Man may suspend the Act of his Choice from being determined for, or against, the Thing proposed, till he has examined, whether it be really of a Nature, in itself and Consequences, to make him happy, or no. For, when he has once chosen it, and thereby it is become a Part of his Happiness, it raises Desire, and that proportionably gives him Uneasiness, which determines his *Will*, and sets him at work in pursuit of his Choice, on all Occasions that offer. And here we may see how it comes to pass, that a Man may justly incur Punishment, tho' it be certain that in all the particular Actions that he *wills*, he does, and necessarily does will, that which he then judges to be good. For, tho' his *Will* be always determined by that, which is judged good by his Understanding, yet it excuses him not : Because, by a too hasty Choice of his own making, he has imposed on himself wrong Measures of Good and Evil ; which, however false and fallacious, have the same Influence on all his future Conduct, as if they were true and right. He has vitiated his own Palate, and must be answerable to himself for the Sickness and Death that follows from it. The eternal Law and Nature of Things must not be alter'd, to comply with his ill ordered Choice. If the Neglect, or Abuse, of the Liberty he had, to examine what would really and truly make for his Happiness, misleads him, the Miscarriages, that follow on it, must be imputed to his own Election. He had a Power to suspend his Determination : It was given him, that he might examine,

examine, and take care of his own Happiness, and look that he were not deceived. And he could never judge, that it was better to be deceived, than not, in a Matter of so great and near Concernment.

WHAT has been said, may also discover to us the Reason why Men in this World prefer different Things, and pursue Happiness by contrary Courses. But yet, since Men are always constant, and in earnest, in Matters of Happiness and Misery, the Question still remains, *How Men come often to prefer the worse to the better*; and to chuse that, which, by their own Confession, has made them miserable?

§. 57. To account for the various and contrary ways Men take, tho' all aim at being happy, we must consider whence the various *Uneasinesses*, that determine the Will in the Preference of each voluntary Action, have their Rise.

From bodily Pains. 1. SOME of them come from Causes not in our Power; such as are often the Pains of the

Body from Want, Disease, or outward Injuries, as the Rack, &c. which, when present, and violent, operate for the most part forcibly on the *Will*, and turn the Courses of Mens Lives from Virtue, Piety, and Religion, and what before they judged to lead to Happiness; every one not endeavouring, or, thro' Disuse, not being able, by the Contemplation of remote and future Good, to raise in himself Desires of them, strong enough to counterbalance the Uneasiness he feels in those bodily Torments, and to keep his *Will* steady in the Choice of those Actions, which lead to future Happiness. A neighbour Country has been of late a tragical Theatre, from which we might fetch Instances, if there needed any, and the World did not, in all Countries and Ages, furnish Examples enough to confirm that received Observation, *Necessitas cogit ad Turpia*; and, therefore, there is great Reason for us to pray, *Lead us not into Temptation*.

From wrong Desires arising from wrong Judgment. 2. OTHER *Uneasinesses* arise from our Desires of absent Good; which Desires always bear Proportion to, and depend on the Judgment we make, and the Relish we have of any absent Good; in both which we are apt to be variously misled, and that by our own Fault.

§. 58. IN

§. 58. In the first place, I shall consider the wrong Judgments Men make of future Good and Evil, whereby their Desires are misled. For, as to present Happiness and Misery, when that alone comes in Consideration, and the Consequences are quite removed, *A Man never chuses amiss*; he knows what best pleases him, and that he actually prefers. Things in their present Enjoyment are what they seem; the apparent and real Good are, in this Case, always the same. For the Pain, or Pleasure, being just so great, and no greater than it is felt, the present Good, or Evil, is really so much as it appears. And, therefore, were every Action of ours concluded within itself, and drew no Consequences after it, we should, undoubtedly, never err in our Choice of Good; we should always infallibly prefer the best. Were the Pains of honest Industry, and of Starving with Hunger and Cold, set together before us, no body would be in doubt which to chuse: Were the Satisfaction of a Lust, and the Joys of Heaven, offered at once to any one's present Possession, he would not balance, or err in the Determination of his Choice.

§. 59. But since our voluntary Actions carry not all the Happiness and Misery, that depend on them, along with them, in their present Performance, but are the precedent Causes of Good and Evil, which they draw after them, and bring upon us, when they themselves are passed, and cease to be; our Desires look beyond our present Enjoyments, and carry the Mind out to absent *Good*, according to the Necessity which we think there is of it, to the Making, or Increase, of our Happiness. 'Tis our Opinion of such a Necessity, that gives it its Attraction: Without that, we are not moved by absent *Good*. For in this narrow Scantling of Capacity, which we are accustomed to, and sensible of here, wherein we enjoy but one Pleasure at once, which, when all Uneasiness is away, is, whilst it lasts, sufficient to make us think ourselves happy; 'tis not all remote, and even apparent Good, that affects us. Because the Indolency and Enjoyment we have, sufficing for our present Happiness, we desire not to venture the Change; since we judge that we are happy already, being

*Our Judgment
of present Good,
or Evil, always
right.*

being content, and that is enough: For who is content, is happy. But as soon as any new Uneasiness comes, this Happiness is disturb'd, and we are set afresh on work in the Pursuit of Happiness.

From a wrong Judgment of what makes a necessary part of their Happiness.

§. 60. THEIR Aptness, therefore, to conclude, that they can be happy without it, is one great Occasion that Men often are not raised to the Desire of the greatest, absent *Good*. For whilst such Thoughts possess them, the Joys of a future State move them not; they have little Concern, or Uneasiness about them; and the *Will*, free from the Determination of such Desires, is left to the Pursuit of nearer Satisfactions, and to the Removal of those Uneasinesses, which it then feels, in its Want of, and Longings after them. Change but a Man's View of these things; let him see, that Virtue and Religion are necessary to his Happiness; let him look into the future State of Bliss, or Misery, and see their God, the righteous Judge, ready to render to every Man according to his Deeds; to them who, by patient Continuance in well-doing, seek for Glory, and Honour, and Immortality, eternal Life; but unto every Soul that doth Evil, Indignation and Wrath, Tribulation and Anguish: To him, I say, who hath a Prospect of the different State of perfect Happiness, or Misery, that attends all Men after this Life, depending on their Behaviour here, the Measures of Good and Evil, that govern his Choice, are mightily changed. For since nothing of Pleasure and Pain, in this Life, can bear any Proportion to endless Happiness, or exquisite Misery of an immortal Soul hereafter; Actions, in his Power, will have their Preference, not according to the transient Pleasure, or Pain, that accompanies, or follows them here, but as they serve to secure that perfect, durable Happiness hereafter.

*A more parti-
cular Account
of wrong
Judgments.*

§. 61. BUT to account more particularly for the Misery, that Men often bring on themselves, notwithstanding that they do all in earnest pursue Happiness, we must consider, how *Things* come to be represented to our Desires, under deceitful Appearances: And that is by the Judgment, pronouncing wrongly concerning

cerning them. To see how far this reaches, and what are the Causes of wrong Judgment, we must remember, that Things are judged good, or bad, in a double Sense.

First, That which is properly good, or bad, is nothing but barely Pleasure, or Pain.

Secondly, But because not only present Pleasure and Pain, but that also which is apt, by its Efficacy, or Consequences, to bring it upon us at a distance, is a proper Object of our Desires, and apt to move a Creature that has Foresight; therefore Things also that draw after them Pleasure, and Pain, are considered as Good and Evil.

§. 62. THE wrong Judgment that misleads us, and makes the Will often fasten on the worse Side, lies in misreporting upon the varions Comparisons of these. The wrong Judgment I am here speaking of, is not what one Man may think of the Determination of another; but what every Man himself must confess to be wrong. For, since I lay it for a certain Ground, that every intelligent Being really seeks Happiness, which consists in the Enjoyment of Pleasure, without any considerable Mixture of Uneasiness; 'tis impossible any one should willingly put into his own Draught any bitter Ingredient, or leave out any thing in his Power, that would tend to his Satisfaction, and the completing of his Happiness, but only by *wrong Judgment*. I shall not here speak of that Mistake, which is the Consequence of invincible Error, which scarce deserves the Name of *wrong Judgment*; but of that *wrong Judgment*, which every Man himself must confess to be so.

§. 63. I. THEREFORE, as to present Pleasure and Pain, the Mind, as has been said, never mistakes that which is really Good, or Evil; that

In comparing present and future.

which is the greater Pleasure, or the greater Pain, is really just as it appears. But tho' present Pleasure and Pain shew their Difference and Degrees so plainly, as not to leave room for Mistake; yet, *when we compare present Pleasure, or Pain, with future*, (which is usually the Case in the most important Determinations of the Will) *we often make wrong Judgments of them*, taking our Measures of them in different Positions of Distance.

Objects, near our View, are apt to be thought greater than those of a larger Size, that are more remote: And so it is with Pleasures and Pains; the present are apt to carry it, and those at a distance have the Disadvantage in the Comparison. Thus most Men, like spend-thrift Heirs, are apt to judge a little in hand better than a great deal to come; and so for small Matters in Possession, part with great ones in Reversion. But that this is a *wrong Judgment*, every one must allow, let his Pleasure consist in whatever it will: Since that which is future, will certainly come to be present; and then, having the same Advantage of Nearness, will shew itself in its full Dimensions, and discover his wilful Mistake, who judged of it by unequal Measures. Were the Pleasure of Drinking accompanied, the very Moment a Man takes off his Glass, with that sick Stomach and aking Head, which, in some Men, are sure to follow not many Hours after, I think no body, whatever Pleasure he had in his Cups, would, on these Conditions, ever let Wine touch his Lips; which yet he daily swallows, and the evil Side comes to be chosen only by the Fallacy of a little Difference in Time. But, if Pleasure, or Pain, can be so lessened only by a few Hours Removal, how much more will it be so, by a farther Distance, to a Man that will not, by a right Judgment, do what Time will, *i. e.* bring it home upon himself, and consider it as present, and there take its true Dimensions? This is the Way we usually impose on ourselves, in respect of bare Pleasure and Pain, or the true Degrees of Happiness, or Misery: The future loses its just Proportion, and what is present obtains the Preference as the greater. I mention not here the *wrong Judgment*, whereby the absent are not only lessened, but reduced to perfect nothing; when Men enjoy what they can at present, and make sure of that, concluding amiss, that no Evil will thence follow. For that lies not in comparing the Greatness of future Good and Evil, which is that we are here speaking of; but in another sort of *wrong Judgment*, which is concerning Good, or Evil, as it is considered to be the Cause and Procurement of Pleasure, or Pain, that will follow from it.

§. 64. THE Cause of our judging amiss, when we compare our present Pleasure, or Pain, with future, seems to me to be the weak and narrow Constitution of our Minds. We cannot well enjoy two Pleasures at once, much less any Pleasure almost, whilst Pain possesses us. The present Pleasure, if it be not very languid, and almost none at all, fills our narrow Souls, and so takes up the whole Mind, that it scarce leaves any Thought of Things absent: Or if among our Pleasures, there are some which are not strong enough to exclude the Consideration of Things at a distance; yet we have so great an Abhorrence of Pain, that a little of it extinguishes all our Pleasures: A little Bitter mingled in our Cup, leaves no Relish of the Sweet. Hence it comes, that at any rate we desire to be rid of the present Evil, which we are apt to think nothing absent can equal; because, under the present Pain, we find not ourselves capable of any the least Degree of Happiness. Mens daily Complaints are a loud Proof of this: The Pain that any one actually feels, is still of all others the worst; and it is with Anguish they cry out, *Any rather than this; nothing can be so intollerable as what I now suffer.* And, therefore, our whole Endeavours and Thoughts are intent to get rid of the present Evil, before all Things, as the first necessary Condition to our Happiness, let what will follow. Nothing, as we passionately think, can exceed, or almost equal, the Uneasiness that sits so heavy upon us. And because the Abstinence from a present Pleasure, that offers itself, is a Pain, nay, oftentimes a very great one, the Desire being inflamed by a near and tempting Object; 'tis no Wonder that That operates after the same Manner that Pain does, and lessens in our Thoughts what is future; and so forces us, as it were, blindfold into its Embraces.

§. 65. ADD to this, that absent Good, or, which is the same thing, future Pleasure, especially if of a sort we are unacquainted with, seldom is able to counter-balance any Uneasiness, either of Pain, or Desire, which is present. For its Greatness being no more, than what shall be really tasted when enjoy'd, Men are apt enough to lessen that, to make it give place to any present Desire; and conclude with themselves, that, when

it comes to a Trial, it may possibly not answer the Report, or Opinion, that generally passes of it; they having often found, that not only what others have magnified, but even what they themselves have enjoy'd, with great Pleasure and Delight, at one time, has proved insipid, or nauseous, at another; and, therefore, they see nothing in it, for which they should forego a present Enjoyment. But that this is a *false way of judging*, when applied to the Happiness of another Life, they must confess; unless they will say, God cannot make those happy he designs to be so. For that being intended for a State of Happiness, it must certainly be agreeable to every one's Wish and Desire: Could we suppose their Relishes as different there, as they are here, yet the Manna in Heaven will suit every one's Palate. Thus much of the *wrong Judgment* we make of present Pleasure, and Pain, when they are compared together, and so the absent considered as future.

In considering Consequences of Actions. §. 66. II. As to *Things good, or bad, in their Consequences*, and by the Aptness is in them to procure us Good, or Evil, in the future, we judge amiss several ways.

1. WHEN we judge that so much Evil does not really depend on them, as in Truth there does.

2. WHEN we judge, that tho' the Consequence be of that Moment, yet it is not of that Certainty, but that it may otherwise fall out, or else by some Means be avoided, as by Industry, Address, Change, Repentance, &c. That these are *wrong Ways of judging*, were easy to shew in every Particular, if I would examine them at large singly: But I shall only mention this in general, viz. That it is a very wrong and irrational Way of proceeding, to venture a greater Good for a less, upon uncertain Guesses, and before a due Examination be made, proportionable to the Weightiness of the Matter, and the Concernment it is to us not to mistake. This, I think, every one must confess, especially if he considers the usual *Causes* of this *wrong Judgment*, whereof these following are some.

Causes of this. §. 67. I. IGNORANCE: He that judges without informing himself to the utmost that he is capable, cannot acquit himself of *judging amiss*. II. IN-

II. INADVERTENCY : When a Man overlooks even that which he does know. This is an affected and present Ignorance, which misleads our Judgments, as much as the other. Judging is, as it were, balancing an Accompt, and determining on which Side the Odds lie. If, therefore, either Side be huddled up in haste, and several of the Sums, that should have gone into the Reckoning, be overlook'd and left out, this Precipitancy causes as *wrong a Judgment*, as if it were a perfect Ignorance. That, which most commonly causes this, is the Prevalency of some present Pleasure, or Pain, heighten'd by our feeble, passionate Nature, most strongly wrought on by what is present. To check this Precipitancy, our Understanding and Reason was given us, if we will make a right Use of it, to search, and see, and then judge thereupon. Without Liberty, the Understanding would be to no purpose : And without Understanding, Liberty (if it could be) would signify nothing. If a Man sees what would do him good, or harm, what would make him happy, or miserable, without being able to move himself one Step towards, or from it, what is he the better for seeing ? And he that is at liberty to ramble in perfect Darkness, what is his Liberty better, than if he were driven up and down, as a Bubble, by the Force of the Wind ? The being acted by a blind Impulse, from without, or from within, is little odds. The first, therefore, and great Use of Liberty, is to hinder blind Precipitancy ; the principal Exercise of Freedom is to stand still, open the Eyes, look about, and take a View of the Consequence of what we are going to do, as much as the Weight of the Matter requires. How much Sloth and Negligence, Heat and Passion, the Prevalency of Fashion, or acquired Indispositions, do severally contribute on occasion to these *wrong Judgments*, I shall not here farther enquire. I shall only add one other false Judgment, which I think necessary to mention, because, perhaps, it is little taken notice of, tho' of great Influence.

§. 68. ALL Men desire Happiness, that's past doubt; but, as has been already observ'd, when they are rid of Pain, they are apt to take up with any Pleasure at hand, or that Custom has

*Wrong Judgment
of what
is necessary to
our Happiness.*

endeared

endeared to them, to rest satisfied in that ; and so being happy, till some new Desire, by making them uneasy, disturbs that Happiness, and shews them that they are not so, they look no farther ; nor is the Will determined to any Action, in pursuit of any other known, or apparent Good. For since we find, that we cannot enjoy all Sorts of Good, but one excludes another ; we do not fix our Desires on every apparent, greater Good, unless it be judged to be necessary to our Happiness ; if we think we can be happy without it, it moves us not. This is another Occasion to Men of *judging wrang*, when they take not that to be necessary to their Happiness, which really is so. This Mistake misleads us, both in the Choice of the Good we aim at, and very often in the Means to it, when it is a remote Good. But, which way ever it be, either by placing it where really it is not, or by neglecting the Means as not necessary to it ; when a Man misses his great End, Happiness, he will acknowledge he judged not right. That which contributes to this Mistake, is the real, or supposed Unpleasantness of the Actions, which are the way to this End ; it seeming so preposterous a thing to Men, to make themselves unhappy in order to Happiness, that they do not easily bring themselves to it.

We can change the Agreeableness, or Disagreeableness, in Things. §. 69. THE last Enquiry, therefore, concerning this Matter is, Whether it be in a Man's Power to change the Pleasantness, and Unpleasantness, that accompanies any sort of Action ? And as to that, it is plain, in many Cases, he can.

Men may, and should correct their Palates, and give a Relish to what either has, or they suppose has none. The Relish of the Mind is as various as that of the Body, and like that too may be altered ; and 'tis a Mistake to think, that Men cannot change the Displeasantnes, or Indifference, that is in Actions, into Pleasure and Desire, if they will do but what is in their Power. A due Consideration will do it in some Cases ; and Practice, Application, and Custom in most. Bread, or Tobacco, may be neglected, where they are shewn to be useful to Health, because of an Indifference, or Disrelish to them ; Reason and Consideration at first recommends, and begins their Trial, and Use finds, or

Custom

Custom makes them pleasant. That this is so in Virtue too, is very certain. Actions are pleasing, or displeasing, either in themselves, or considered as a Means to a greater and more desirable End. The eating of a well seasoned Dish, suited to a Man's Palate, may move the Mind, by the Delight itself that accompanies the eating, without Reference to any other End: To which the Consideration of the Pleasure there is in Health and Strength, (to which that Meat is subservient) may add a new Gusto, able to make us swallow an ill-relished Potion. In the latter of these, any Action is rendered more or less pleasing, only by the Contemplation of the End, and the being more or less perswaded of its Tendency to it, or necessary Connexion with it: But the Pleasure of the Action itself is best acquired, or increased, by Use and Practice. Trials often reconcile us to that, which, at a distance, we looked on with Aversion; and, by Repetitions, wear us into a liking of what possibly, in the first Essay, displeased us. Habits have powerful Charms, and put so strong Attractions of Easiness and Pleasure, into what we accustom ourselves to, that we cannot forbear to do, or at least be easy in the Omission of Actions, which habitual Practice has suited, and thereby recommends to us. Tho' this be very visible, and every one's Experience shews him he can do so: Yet it is a Part in the Conduct of Men, towards their Happiness, neglected to a degree, that it will be possibly entertain'd as a Paradox, if it be said, that Men can make Things, or Actions, more or less pleasing to themselves; and thereby remedy that, to which one may justly impute a great deal of their wandring. Fashion, and the common Opinion, having settled wrong Notions, and Education and Custom ill Habits, the just Values of Things are misplaced, and the Palates of Men corrupted. Pains should be taken to rectify these; and contrary Habits change our Pleasures, and give a Relish to that which is necessary, or conducive to our Happiness. This every one must confess he can do, and when Happiness is lost, and Misery overtakes him, he will confess he did amiss in neglecting it, and condemn himself for it: And I ask every one, whether he has not often done so?

Preference of Vice to Virtue, a manifest wrong Judgment.

§. 70. I SHALL not now enlarge any farther, on the *wrong Judgments*, and Neglect of what is in their Power, whereby Men mislead themselves. This would make a Volume, and is not my Business. But whatever false Notions, or shameful Neglect of what is in their Power, may put Men out of their Way to Happiness, and distract them, as we see, into so different Courses of Life, this yet is certain, that Morality, established upon its true Foundations, cannot but determine the Choice, in any one that will but consider : And he, that will not be so far a rational Creature, as to reflect seriously upon infinite Happiness and Misery, must needs condemn himself, as not making that Use of his Understanding he should. The Rewards and Punishments of another Life, which the Almighty has established, as the Enforcements of His Law, are of Weight enough to determine the Choice, against whatever Pleasure, or Pain, this Life can shew, when the eternal State is considered, but in its bare Possibility, which no body can make any doubt of. He, that will allow exquisite and endless Happiness to be but the possible Consequence of a good Life here, and the contrary State the possible Reward of a bad one ; must own himself to judge very much amiss, if he does not conclude, That a virtuous Life, with the certain Expectation of everlasting Bliss, which may come, is to be preferred to a vicious one, with the Fear of that dreadful State of Misery, which 'tis very possible may overtake the Guilty ; or at best the terrible, uncertain Hope of Annihilation. This is evidently so, tho' the virtuous Life here had nothing but Pain, and the vicious continual Pleasure : Which yet is, for the most part, quite otherwise, and wicked Men have not much the Odds to brag of, even in their present Possession : Nay, all things rightly considered, have, I think, even the worst Part here. But, when infinite Happiness is put in one Scale, against infinite Misery in the other ; if the worst that comes to the pious Man, if he mistakes, be the best that the Wicked can attain to, if he be in the right, who can, without Madness, run the Venture ? Who in his Wits would chuse to come within a Possibility of infinite Misery, which, if he miss, there is yet nothing to be got by that Hazard ? Whereas, on the other side,

the

the sober Man ventures nothing against infinite Happiness to be got, if his Expectation comes to pass. If the good Man be in the right, he is eternally happy ; if he mistakes, he is not miserable, he feels nothing. On the other side, if the Wicked be in the right, he is not happy ; if he mistakes, he is infinitely miserable. Must it not be a most manifest wrong Judgment, that does not presently see, to which side, in this Case, the Preference is to be given ? I have forbore to mention any thing of the Certainty, or Probability, of a future State, designing here to shew the *wrong Judgment*, that any one must allow he makes, upon his own Principles, laid how he pleases, who prefers the short Pleasures of a vicious Life upon any Consideration, whilst he knows, and cannot but be certain, that a future Life is at least possible.

§. 71. To conclude this Enquiry into human Liberty, which as it stood before, I myself from the Beginning fearing, and a very judicious Friend of mine, since the Publication, suspecting to have some Mistake in it, tho' he could not particularly shew it me, I was put upon a stricter Review of this Chapter : Wherein lighting upon a very easy, and scarce observable Slip I have made, in putting one seemingly indifferent Word for another, that Discovery open'd to me this present View, which here, in this *second* Edition, I submit to the learned World, and which in short is this : *Liberty* is a Power to act, or not to act, according as the Mind directs. A Power to direct the operative Faculties to Motion, or Rest, in particular Instances, is that which we call the *Will*. That, which in the Train of our voluntary Actions, determines the *Will* to any Change of Operation, is some present Uneasiness ; which is, or at least is always accompanied with, that of *Desire*. Desire is always moved by Evil, to fly it ; because a total Freedom from Pain always makes a necessary Part of our Happiness : But every *Good*, nay, every *greater Good*, does not constantly move *Desire*, because it may not make, or may not be taken to make, any necessary Part of our Happiness : For all that we desire, is only to be happy. But tho' this general *Desire* of Happiness operates constantly and invariably, yet the Satisfaction of any particular *Desire* can be suspended from determining the *Will* to any

subservient Action, till we have maturely examined, whether the particular apparent Good, which we then desire, makes a Part of our real Happiness, or be consistent, or inconsistent with it. The Result of our Judgment, upon that Examination, is what ultimately determines the Man, who could not be *free*, if his *Will* were determined by any thing but his own *Desire*, guided by his own *Judgment*. I know that Liberty, by some, is placed in an *Indifference* of the Man, antecedent to the Determination of his *Will*. I wish they, who lay so much Stress on such an *antecedent Indifference*, as they call it, had told us plainly, whether this supposed *Indifference* be antecedent to the Thought and Judgment of the Understanding, as well as to the Degree of the *Will*. For it is pretty hard to state it between them, *i. e.* immediately after the Judgment of the Understanding, and before the Determination of the *Will*, because the Determination of the *Will* immediately follows the Judgment of the Understanding: And to place Liberty in an *Indifference*, antecedent to the Thought and Judgment of the Understanding, seems to me to place Liberty in a State of Darknes, wherein we can neither see, nor say, any thing of it; at least it places it in a Subject, incapable of it, no Agent being allowed capable of Liberty, but in consequence of Thought and Judgment. I am not nice about Phrases, and, therefore, consent to say, with those that love to speak so, that Liberty is placed in *Indifference*: But 'tis in an *Indifference*, which remains after the Judgment of the Understanding; yea, even after the Determination of the *Will*: And that is an *Indifference* not of the Man, (for after he has once judged which is best, *viz.* to do, or forbear, he is no longer indifferent) but an *Indifference* of the operative Powers of the Man, which remaining equally able to operate, or to forbear operating after, as before the Decree of the *Will*, are in a State, which, if one pleases, may be called *Indifference*; and as far as this *Indifference* reaches, a Man is free, and no farther: *V. g.* I have the Ability to move my Hand, or to let it rest, that operative Power is indifferent to move, or not to move my Hand: I am then, in that respect, perfectly free. My *Will* determines that operative Power to Rest, I am yet free, because the *Indifference* of that my operative Power

Power to act, or not to act, still remains ; the Power of moving my Hand is not at all impaired by the Determination of my *Will*, which at present orders Rest ; the *Indifferency* of that Power to act, or not to act, is just as it was before, as will appear, if the *Will* puts it to the Trial, by ordering the contrary. But if, during the Rest of my Hand, it be seized by a sudden Palsey, the *Indifferency* of that operative Power is gone, and with it my Liberty ; I have no longer Freedom in that Respect, but am under a Necessity of letting my Hand rest. On the other side, if my Hand be put into Motion, by a Convulsion, the *Indifferency* of that operative Faculty is taken away by that Motion, and my Liberty in that Case is lost : For I am under a Necessity of having my Hand move. I have added this, to shew in what sort of *Indifferency* Liberty seems to me to consist, and not in any other, real, or imaginary.

§. 72. TRUE Notions concerning the Nature and Extent of *Liberty*, are of so great Importance, that I hope I shall be pardoned this Digression, which my attempt to explain it, has led me into. The *Ideas of Will, Volition, Liberty, and Necessity*, in this Chapter of Power, came naturally in my way. In a former Edition of this Treatise, I gave an Account of my Thoughts concerning them, according to the Light I then had : And now, as a Lover of Truth, and not a Worshipper of my own Doctrines, I own some Change of my Opinion, which, I think, I have discovered Ground for. In what I first writ, I with an unbiassed Indifferency followed Truth, whither I thought she led me. But neither being so vain as to fancy Infallibility, nor so disingenuous as to dissemble my Mistakes, for fear of blemishing my Reputation, I have, with the same sincere Design for Truth only, not been ashamed to publish what a severer Enquiry has suggested. It is not impossible, but that some may think my former Notions right, and some, (as I have already found) these latter, and some neither. I shall not at all wonder at this Variety in Mens Opinions ; impartial Deductions of Reason in controverted Points being so very rare, and exact ones in abstract Notions not so very easy, especially if of any Length. And, therefore, I should think myself not a little beholden to any one, who would, upon

upon these, or any other Grounds, fairly clear this Subject of *Liberty* from any Difficulties that may yet remain.

BEFORE I close this Chapter, it may, perhaps, be to our Purpose, and help to give us clearer Conceptions about *Power*, if we make our Thoughts take a little more exact Survey of *Action*. I have said above, that we have *Ideas* but of two Sorts of *Action*, viz. *Motion* and *Thinking*. These, in truth, tho' call'd and counted *Actions*, yet, if nearly consider'd, will not be found to be always perfectly so. For, if I mistake not, there are Instances of both Kinds, which, upon due Consideration, will be found rather *Passions* than *Actions*, and consequently so far the Effects barely of passive Powers in those Subjects, which, yet, on their account are thought Agents. For in these Instances, the Substance that hath Motion, or Thought, receives the Impression, whereby it is put into that *Action* purely from without, and so acts merely by the Capacity it has to receive such an Impression from some external Agent; and such a *Power* is not properly an *Active Power*, but a mere Passive Capacity in the Subject. Sometimes the Substance, or Agent, puts itself into *Action* by its own Power, and this is properly *Active Power*. Whatsoever Modification a Substance has, whereby it produces any Effect, that is called *Action*; v. g. a solid Substance, by Motion, operates on, or alters the sensible *Ideas* of another Substance, and, therefore, this Modification of Motion we call Action. But yet this Motion in that solid Substance is, when rightly considered, but a Passion, if it received it only from some external Agent. So that the *Active Power* of Motion is in no Substance, which cannot begin Motion in itself, or in another Substance, when at Rest. So likewise in *Thinking*, a Power to receive *Ideas*, or Thoughts, from the Operation of any external Substance, is called a *Power* of Thinking: But this is but a *Passive Power*, or Capacity. But to be able to bring into View *Ideas* out of Sight, at one's own Choice, and to compare which of them one thinks fit, this is an *Active Power*. This Reflexion may be of some use to preserve us from Mistakes about *Powers* and *Actions*, which Grammar, and the common Frame of Languages, may be apt to lead us into: Since what is signified by *Verbs* that Gram-

marians call *Active*, does not always signify *Action*; *v. g.* this Proposition, I see the Moon, or a Star, or I feel the Heat of the Sun, tho' expressed by a *Verb Active*, does not signify any Action in me, whereby I operate on those Substances; but the Reception of the *Ideas* of Light, Roundness, and Heat, wherein I am not active, but barely passive, and cannot in that Position of my Eyes, or Body, avoid receiving them. But when I turn my Eyes another way, or remove my Body out of the Sun-beams, I am properly active; because of my own Choice, by a Power within myself, I put myself into that Motion. Such an *Action* is the Product of *Active Power*.

§. 73. AND thus I have, in a short Draught, given a View of our *original Ideas*, from whence all the rest are derived, and of which they are made up; which, if I would consider, as a Philosopher, and examine on what Causes they depend, and of what they are made, I believe, they all might be reduced to these few primary and original ones, *viz.*

Extension,

Solidity,

Mobility, or the Power of being moved;

which by our Senses we receive from the Body:

Perceptivity, or the Power of Perception, or Thinking;

Motivity, or the Power of Moving;

which, by Reflexion, we receive from our Minds. I crave Leave to make use of these two new Words, to avoid the Danger of being mistaken in the Use of those which are equivocal. To which if we add,

Existence,

Duration,

Number;

which belonged both to one and the other, we have, perhaps, all the Original *Ideas*, on which the rest depend. For, by these, I imagine, might be explained the Nature of Colours, Sounds, Tastes, Smells, and all other *Ideas* we have, if we had but Faculties acute enough to perceive the severally modified Extensions,

tensions, and Motions of those minute Bodies, which produce those several Sensations in us. But my present Purpose being only to enquire into the Knowledge the Mind has of Things, by those *Ideas* and Appearances, which *God* has fitted it to receive from them, and how the Mind comes by that Knowledge, rather than into their Causes, or Manner of Production; I shall not, contrary to the Design of this Essay, set myself to enquire Philosophically into the peculiar Constitution of Bodies, and the Configuration of Parts, whereby they have the Power to produce in us the *Ideas* of their sensible Qualities: I shall not enter any farther into that Disquisition; it sufficing to my Purpose to observe, That Gold, or Saffron, has a Power to produce in us the *Idea* of Yellow; and Snow, or Milk, the *Idea* of White; which we can only have by our Sight, without examining the Texture of the Parts of those Bodies, or the particular Figures, or Motion, of the Particles, which rebound from them, to cause in us that particular Sensation: Tho', when we go beyond the bare *Ideas* of our Minds, and would enquire into their Causes, we cannot conceive any Thing else to be in any sensible Object, whereby it produces different *Ideas* in us, but the different Bulk, Figure, Number, Texture, and Motion of its insensible Parts.

C H A P. XXII.

Of Mixed Modes.

Mixed Modes,
what.

§. i.

HA VING treated of *simple Modes* in the foregoing Chapters, and given several Instances of some of the most considerable of them, to shew what they are, and how we come by them; we are now in the next Place to consider those we call *Mixed Modes*; such are the complex *Ideas*, we mark by the Names *Obligation*, *Drunkenness*, a *Lie*, &c. which, consisting of several Combinations of simple *Ideas* of different Kinds, I have called *Mixed Modes*, to distinguish them from the

more

more simple Modes, which consist only of simple *Ideas* of the same Kind. These Mixed Modes being also such Combinations of simple *Ideas*, as are not looked upon to be Characteristical Marks of any real Beings that have a steady Existence, but scattered and independent *Ideas*, put together by the Mind, are therefore distinguished from the complex *Ideas* of Substances.

§. 2. THAT the Mind, in respect of its simple *Ideas*, is wholly passive, and receives them all *Made by the Mind.* from the Existence and Operations of Things, such as Sensation, or Reflexion, offers them, without being able to make any one *Idea*, Experience shews us. But, if we attentively consider these *Ideas* I call *Mixed Modes*, we are now speaking of, we shall find their Original quite different. *The Mind often exercises an Active Power, in making these several Combinations:* For, it being once furnished with simple *Ideas*, it can put them together, in several Compositions, and so make Variety of complex *Ideas*, without examining whether they exist so together in Nature. And hence, I think, it is, that these *Ideas* are called *Notions*, as if they had their original, and constant Existence, more in the Thoughts of Men, than in the Reality of Things; and to form such *Ideas*, it sufficed, that the Mind puts the Parts of them together, and that they were consistent in the Understanding, without considering whether they had any real Being; tho' I do not deny, but several of them might be taken from Observation, and the Existence of several simple *Ideas* so combined, as they are put together in the Understanding. For the Man, who first framed the *Idea* of *Hypocrisy*, might have either taken it at first from the Observation of one, who made shew of good Qualities which he had not; or else have framed that *Idea* in his Mind, without having any such Pattern to fashion it by: For it is evident, that in the Beginning of Languages, and Societies of Men, several of those complex *Ideas*, which were consequent to the Constitutions established amongst them, must needs have been in the Minds of Men, before they existed anywhere else; and that many Names, that stood for such complex *Ideas*, were in use, and so those *Ideas* framed, before the Combinations they stood for ever existed.

*Sometimes got
by; the Explica-
tion of their
Names.*

Stand for them.

*The Name ties
the Parts of
Mixed Modes
into one Idea.*

§. 3. INDEED, now that Languages are made, and abound with Words standing for such Combinations, *an usual Way of getting these complex Ideas, is by the Explication of those Terms that*

For, consisting of a Company of simple Ideas, combined, they may, by Words standing for those simple Ideas, be represented to the Mind of one who understands those Words, tho' that complex Combination of simple Ideas were never offered to his Mind, by the real Existence of Things. Thus a Man may come to have the *Idea of Sucrilege, or Murder,* by enumerating to him the simple Ideas which these Words stand for, without ever seeing either of them committed.

§. 4. EVERY Mixed Mode, consisting of many distinct, simple Ideas, it seems reasonable to enquire, whence it has its Unity; and how such a precise Multitude comes to make but one Idea,

since that Combination does not always exist together in Nature? To which I answer, It is plain, it has its Unity from an Act of the Mind, combining those several simple Ideas together, and considering them as one complex one, consisting of those Parts; and the Mark of this Union, or that which is looked on generally to complete it, is one Name given to that Combination. For it is by their Names, that Men commonly regulate their Account of their distinct Species of Mixed Modes, seldom allowing, or considering, any Number of simple Ideas, to make one complex one, but such Collections as there be Names for. Thus, tho' the killing of an old Man be as fit in Nature to be united into one complex Idea, as the killing a Man's Father; yet, there being no Name standing precisely for the one, as there is the Name of *Parricide* to mark the other, it is not taken for a particular, complex Idea, nor a distinct Species of Actions from that of killing a young Man, or any other Man.

*The Cause of
making Mixed
Modes.*

§. 5. IF we should enquire a little farther, to see what it is that occasions Men to make several Combinations of simple Ideas, into distinct, and, as it were, settled Modes, and neglect others, which, in the Nature of Things themselves, have as much an Aptness

Aptness to be combined, and make distinct *Ideas*, we shall find the Reason of it to be the End of Language; which being to mark, or communicate Mens Thoughts to one another, with all the Dispatch that may be, they usually make such Collections of *Ideas* into complex Modes, and affix Names to them, as they have frequent Use of, in their Way of Living, and Conversation; leaving others, which they have but seldom an Occasion to mention, loose, and without Names, that tie them together: They rather chusing to enumerate (when they have need) such *Ideas* as make them up, by the particular Names that stand for them, than to trouble their Memories by multiplying of complex *Ideas* with Names to them, which they shall seldom, or never, have any Occasion to make use of.

§. 6. THIS shews us *how it comes to pass*, that *Why Words in
there are in every Language many particular one Language,
Words, which cannot be rendered by any one single have none an-
Word of another:* For the several Fashions, Cus- swering in an-
toms, and Manners of one Nation, making several Combinati- other.
ons of *Ideas* familiar and necessary in one, which another Peo-
ple have never had Occasion to make, or, perhaps, so much as
take notice of; names come of Course to be annexed to them,
to avoid long Paraphrases in Things of daily Conversation; and
so they become so many distinct complex *Ideas* in their Minds.
Thus ἐπαντίμος amongst the Greeks, and *Proscriptio* amongst the
Romans, were Words, which other Languages had no Names that
exactly answered, because they stood for complex *Ideas*, which
were not in the Minds of the Men of other Nations. Where
there was no such Custom, there was no Notion of any such
Actions; no Use of such Combinations of *Ideas*, as were united,
and, as it were, tied together by those Terms: And, therefore,
in other Countries, there were no Names for them.

§. 7. HENCE also we may see the Reason, why *And Lan-
guages constantly change*, take up new, and *ges change*.
lay by old Terms: Because Change of Customs and Opinions
bringing with it new Combinations of *Ideas*, which it is necessary
frequently to think on, and talk about, new Names, to avoid
long Descriptions, are annexed to them; and so they become

new Species of complex Modes. What a Number of different Ideas are by this means wrapt up in one short Sound, and how much of our Time and Breath is thereby saved, any one will see, who will but take the pains to enumerate all the Ideas that either *Reprise*, or *Appeal*, stands for ; and, instead of either of those Names, use a Periphrasis, to make any one understand their Meaning.

Mixed Modes, where they exist. §.8. THO' I shall have occasion to consider this more at large, when I come to treat of Words, and their Use ; yet I could not avoid to take thus much notice here of the Names of *Mixed Modes* ; which being fleeting, and transient Combinations of simple Ideas, which have but a short Existence any where, but in the Minds of Men, and there too have no longer any Existence than whilst they are thought on, *have not so much any where the Appearance of a constant and lasting Existence, as in their Names :* Which are, therefore, in these sort of Ideas, very apt to be taken for the Ideas themselves. For, if we should enquire where the Idea of a *Triumph*, or *Apotheosis* exists, it is evident, they could neither of them exist altogether any where in the Things themselves, being Actions that require Time to their Performance, and so could never all exist together : And, as to the Minds of Men, where the Ideas of these Actions are supposed to be lodged, they have there too a very uncertain Existence ; and, therefore, we are apt to annex them to the Names that excite them in us.

How we get the Ideas of Mixed Modes.

§.9. THERE are, therefore, three Ways whereby we get the complex Ideas of *Mixed Modes*.

1. By Experience and Observation of Things themselves. Thus by seeing two Men wrestle, or fence, we get the Idea of Wrestling, or Fencing. 2. By *Invention*, or voluntary putting together of several simple Ideas in our own Minds : So he that first invented Printing, or Etching, had an Idea of it in his Mind, before it ever existed. 3. Which is the most usual way, by *explaining the Names* of Actions we never saw, or Notions we cannot see ; and by enumerating, and thereby, as it were, setting before our Imaginations all those Ideas, which go to the making them up, and are the constituent

Parts of them. For, having, by *Sensation* and *Reflexion*, stored our Minds with simple *Ideas*, and by Use got the Names that stand for them, we can, by those Names, represent to another any complex *Idea* we would have him conceive; so that it has in it no simple *Ideas* but what he knows, and has, with us, the same Name for. For all our complex *Ideas* are ultimately resolvable into simple *Ideas*, of which they are compounded, and originally made up, tho', perhaps, their immediate Ingredients, as I may so say, are also complex *Ideas*. Thus the *Mixed Mode*, which the Word *Lie* stands for, is made of these simple *Ideas*: 1. Articulate Sounds. 2. Certain *Ideas* in the Mind of the Speaker. 3. Those Words the Signs of those *Ideas*. 4. Those Signs put together by Affirmation, or Negation, otherwise than the *Ideas* they stand for, are in the Mind of the Speaker. I think, I need not go any farther in the Analysis of that complex *Idea*, we call a *Lie*: What I have said, is enough to shew, that it is made up of simple *Ideas*: And it could not but be an offensive Tedium to my Reader, to trouble him with a more minute Enumeration of every particular simple *Idea*, that goes to this complex one; which, from what has been said, he cannot but be able to make out to himself. The same may be done in all our complex *Ideas* whatsoever; which, however compounded, and decompounded, may, at last, be resolved into simple *Ideas*, which are all the Materials of Knowledge, or Thought, we have, or can have; nor shall we have Reason to fear, that the Mind is hereby stinted to too scanty a Number of *Ideas*, if we consider what an inexhaustible Stock of simple Modes, Number and Figure alone affords us. How far then *Mixed Modes*, which admit of the various Combinations of different simple *Ideas*, and their infinite Modes, are from being few and scanty, we may easily imagine. So that before we have done, we shall see, that no body need be afraid, he shall not have Scope and Compass enough for his Thoughts to range in, tho' they be, as I pretend, confined only to simple *Ideas*, received from Sensation, or Reflexion, and their several Combinations.

§. 10. It is worth our observing, which of all Motion, Thinking, and Power,
our simple Ideas have been most modified, and had most

have been most modified. most Mixed Modes made out of them, with Names given to them: And those have been these three; Thinking, and Motion, (which are the two *Ideas* which comprehend in them all Action) and Power, from whence these Actions are conceived to flow. These simple *Ideas*, I say, of Thinking, Motion, and Power, have been those which have been most modified; and out of whose Modifications have been made most complex Modes, with Names to them. For Action being the great Busines of Mankind, and the whole Matter about which all Laws are conversant, it is no wonder, that the several Modes of Thinking and Motion should be taken notice of, the *Ideas* of them observed, and laid up in the Memory, and have Names assigned to them; without which, Laws could be but ill-made, or Vice and Disorder repressed. Nor could any Communication be well had amongst Men, without such complex *Ideas*, with Names to them: And, therefore, Men have settled Names, and supposed settled *Ideas*, in their Minds, of Modes of Actions, distinguished by their Causes, Means, Objects, Ends, Instruments, Time, Place, and other Circumstances; and also of their Powers fitted for those Actions, v. g. Boldnes is the Power to speak, or do what we intend, before others, without Fear, or Disorder; and the Greeks call the Confidence of Speaking, by a peculiar Name, *πρεσβολή*: Which Power, or Ability in Man, of doing any thing, when it has been acquired by frequent doing the same thing, is that *Idea* we name Habit: When it is forward, and ready upon every Occasion to break into Action, we call it Disposition. Thus Testiness is a Disposition, or Aptness, to be angry.

To conclude, Let us examine any *Modes of Action*, v. g. Consideration and Assent, which are Actions of the Mind; Running and Speaking, which are Actions of the Body; Revenge and Murder, which are Actions of both together, and we shall find them but so many *Collections of simple Ideas*, which, together, make up the complex ones signified by those Names.

Several Words seeming to signify Action, signify but the Effect.

§. 11. POWER being the Source from whence all Action proceeds, the Substances wherein these Powers are, when they exert this Power into Act, are called Causes; and the Substances which therupon

thereupon are produced, or the simple *Ideas*, which are introduced into any Subject, by the exerting of that Power, are called *Effects*. The *Efficacy*, whereby the new Substance, or *Idea*, is produced, is called, in the Subject exerting that Power, *Action*; but in the Subject, wherein any simple *Idea* is changed, or produced, it is called *Passion*: Which Efficacy, however various, and the Effects almost infinite, yet we can, I think, conceive it, in intellectual Agents, to be nothing else but Modes of Thinking and Willing; in corporeal Agents, nothing else but Modifications of Motion. I say, I think, we cannot conceive it to be any other but these two: For whatsoever sort of Action, besides these, produces any Effects, I confess myself to have no Notion, nor *Idea* of; and so it is quite remote from my Thoughts, Apprehensions, and Knowledge, and as much in the dark to me as five other Senses, or as the *Ideas* of Colours to a blind Man: And, therefore, many Words, which seem to express some Action, signify nothing of the Action, or *Modus Operandi* at all, but barely the Effect, with some Circumstances of the Subject wrought on, or Cause operating, v.g. Creation, Annihilation, contain in them no *Idea* of the Action, or Manner, whereby they are produced, but barely of the Cause, and the Thing done. And when a Countryman says the Cold freezes Water, tho' the Word Freezing seems to import some Action, yet truly it signifies nothing but the Effect, viz. that Water, that was before fluid, is become hard and consistent, without containing any *Ideas* of the Action whereby it is done.

§. 12. I THINK I shall not need to remark here, that tho' Power and Action make the greatest Part of Mixed Modes, mark'd by Names, and familiar in the Minds and Mouths of Men; yet other simple Ideas, and their several Combinations, are not excluded: Much less, I think, will it be necessary for me to enumerate all the Mixed Modes, which have been settled, with Names to them. That would be to make a Dictionary of the greatest Part of the Words made use of in Divinity, Ethics, Law, and Politics, and several other Sciences. All that is requisite to my present Design, is, to shew what sort of Ideas those are, which I call Mixed Modes; how the

Mixed Modes,
made also of o-
ther Ideas.

the Mind comes by them, and that they are Compositions, made up of simple *Ideas*, got from Sensation and Reflexion; which, I suppose, I have done.

C H A P. XXIII.

Of our complex Ideas of Substances.

Ideas of Substances, how made.

§. 1. **T**H E Mind being, as I have declared, furnished with a great Number of the simple *Ideas*, conveyed in by

the *Senses*, as they are found in exterior Things, or, by *Reflexion*, on its own Operations, takes notice also, that a certain Number of these simple *Ideas* go constantly together; which being presumed to belong to one Thing, and Words being suited to common Apprehensions, and made use of for quick Dispatch, are called, so united in one Subject, by one Name; which, by Inadvertency, we are apt afterwards to talk of, and consider as one simple *Idea*, which, indeed, is a Complication of many *Ideas* together: Because, as I have said, not imagining how these simple *Ideas* can subsist by themselves, we accustom ourselves to suppose some *Substratum*, wherein they do subsist, and from which they do result; which, therefore, we call *Substance* *.

§. 2. So

* THIS Section, which was intended only to shew, how the Individuals of distinct Species of Substances came to be looked upon as simple *Ideas*, and so to have simple Names, viz. from the supposed simple *Substratum*, or *Substance*, which was look'd upon as the Thing itself, in which inhereth, and from which resulteth that Complication of *Ideas*, by which it was represented to us, hath been mistaken for an Account of the *Idea* of Substance in general; and, as such, hath been represented in these Words; *But how comes the general Idea of Substance to be framed in our Minds? Is this by abstracting and enlarging simple Ideas? No: ‘ But it is by a Complication of many simple Ideas together: Because not imagining how these simple Ideas can subsist by themselves, we accustom ourselves to suppose some Substratum wherein they do subsist, and from whence they do result; which therefore we call Substance.’ And is this all indeed, that is to be said for the Being of Substance, That we accustom ourselves*

§. 2. So that if any one will examine himself concerning his *Notion of pure Substance in general*, he will find he has no other *Idea* of it at all, but only a Supposition of he knows not what Support of such Qualities, which are capable of producing simple *Ideas* in us; which Qualities are commonly called Accidents. If any one should be asked, what is the Subject, wherein Colour, or Weight, inheres? he would have nothing to say, but the solid, extended Parts: And if he were demanded, what is it, that Solidity and Extension inhere in, he would not be in a much better Case, than

Our Idea of Substance in general.

ourselves to suppose a *Substratum?* Is that Custom grounded upon true Reason, or not? If not, then Accidents and Modes must subsist of themselves; and these simple Ideas needs no Tortoise to support them: For Figures and Colours, &c. would do well enough of themselves, but for some Fancies Men have accustomed themselves to.

To which Objection of the Bishop of Worcester, our Author * answers thus: Herein your Lordship seems to charge me with two Faults: One, That I make the general Idea of Substance to be framed, not by abstracting and enlarging simple Ideas, but by a Complication of many simple Ideas together: The other, as if I had said, the Being of Substance had no other Foundation, but the Fancies of Men.

As to the first of these, I beg leave to remind your Lordship, That I say, in more Places than one, and particularly Book III. Chap. 3. §. 6. and Book I. Chap. 11. §. 9. where, *ex professo*, I treat of Abstraction and general Ideas, That they are all made by abstracting; and, therefore, could not be understood to mean, that That of Substance was made any other Way: However, my Pen might have slipt, or the Negligence of Expression, where I might have something else, than the general Idea of Substance in View, might make me seem to say so.

THAT I was not speaking of the general Idea of Substance, in the Passage your Lordship quotes, is manifest from the Title of that Chapter, which is, *Of the Complex Ideas of Substances:* And the first Section of it, which your Lordship cites, for those Words you have set down.

IN which Words, I do not observe any, that deny the general Idea of Substance to be made by Abstraction; nor any that say, it is made by a Complication of many simple Ideas together. But speaking, in that Place, of the Ideas of distinct Substances, such as Man, Horse, Gold, &c. I say they are made up of certain Combinations of simple Ideas; which Combinations are looked upon, each of them, as one simple Idea,

than the *Indian* before mentioned, who saying, that the World was supported by a great Elephant, was asked what the Elephant rested on? To which his Answer was, a great Tortoise: But being again pressed to know, what gave support to the broad-back'd Tortoise? Replied, something, he knew not what. And thus here, as in all other Cases, where we use Words without having clear and distinct Ideas, we talk like Children; who being question'd, what such a Thing is, which they know not, readily give this satisfactory Answer, That it is *something*: Which, in Truth, signifies no more, when so used, either by Children, or Men,

Idea, tho' they are many; and we call it by one Name of *Substance*, tho' made up of Modes, from the Custom of supposing a *Substratum*, wherein that Combination does subsist. So that, in this Paragraph, I only give an Account of the *Idea* of distinct Substances, such as *Oak*, *Elephant*, *Iron*, &c. how, tho' they are made up of distinct Complications of Modes, yet they are looked on, as one *Idea*, called by one Name, as making distinct Sorts of Substances.

BUT that my Notion of *Substance in general*, is quite different from these, and has no such Combination of simple Ideas in it, is evident from the immediate following Words, where I say: || 'The *Idea of pure Substance in general*, is only a Supposition of we know not what Support of such Qualities as are capable of producing simple Ideas in us.' And these two, I plainly distinguish all along, particularly where I say, 'Whatever, therefore, be the secret and Abstract Nature of Substance in general, all the Ideas we have of particular, distinct Substances, are nothing but several Combinations of simple Ideas, co-existing in such, tho' unknown, Cause of their Union, as makes the whole subsist of itself.'

THE other Thing laid to my Charge, is, as if I took the *Being of Substance* to be doubtful, or render'd it so, by the imperfect and ill-grounded *Idea* I have given of it. To which I beg leave to say, That I ground not the *Being*, but the *Idea* of Substance, on our accustoming ourselves to suppose some *Substratum*; for 'tis of the *Idea* alone, I speak there, and not of the *Being of Substance*. And having every where affirmed and built upon it, That a Man is a Substance, I cannot be supposed to question, or doubt of, the *Being of Substance*, till

Ib. §. 29. I can question, or doubt of, my own *Being*. Farther, I say, 'Sensation convinces us, that there are solid, extended Substances; and Reflexion, that there are thinking ones.' So that I think, the *Being of Substance* is not shaken, by what I have said: And if the *Idea* of it should be, yet (the *Being of Things depending not on our Ideas*) the *Being of Substance*,

Men, but that they know not what ; and that the Thing they pretend to know, and talk of, is what they have no distinct *Idea* of at all, and so are perfectly ignorant of it, and in the Dark. The *Idea* then we have, to which we give the general Name Substance, being nothing but the supposed, but unknown Support of those Qualities we find existing, which we imagine cannot subsist *sine re substante*, without something to support them, we call that Support *Substantia*; which, according to the true Import of the Word, is, in plain *English*, *standing under*, or *upholding* *.

VOL. I.

N n

§. 3. AN

stance, would not be at all shaken, by my saying, We had but an obscure, imperfect *Idea* of it, and that That *Idea* came from our accustoming ourselves to suppose some *Substratum*; or indeed, if I should say, We had no *Idea* of Substance at all. For a great many Things may be, and are granted to have a *Being*, and be in Nature, of which we have no *Ideas*. For Example : It cannot be doubted but there are distinct Species of separate Spirits, of which yet we have no distinct *Ideas* at all. It cannot be questioned but Spirits have Ways of communicating their Thoughts, and yet we have no *Idea* of it at all.

THE *Being*, then, of *Substance*, being safe and secure, notwithstanding any Thing I have said, let us see whether the *Idea* of it be not so too. Your Lordship asks, with Concern, *And is this all, indeed, that is to be said for the Being* (if your Lordship please, let it be the *Idea*) *of Substance*, that we accustom ourselves to suppose a *Substratum*; *is that Custom grounded upon true Reason, or no?* I have said, that it is grounded upon this, ‘That we cannot conceive how simple *Ideas* of sensible B. II. C. 23. Qualities should subsist alone, and, therefore, we §. 4. suppose them to exist in, and to be supported by, some common Subject, which Support we denote by the Name, *Substance*.’ Which, I think, is a true *Reason*, because it is the same your Lordship grounds the Supposition of a *Substratum* on, in this very Page; even on the *Repugnancy to our Conceptions*, that *Modes and Accidents should subsist by themselves*. So that I have the good Luck, here again, to agree with your Lordship : And consequently conclude, I have your Approbation in this, That the *Substratum* to Modes, or Accidents, which is our *Idea* of Substance in general, is founded in this, ‘That we cannot conceive how Modes, or Accidents, can subsist by themselves.’

* FROM this Paragraph, there hath been raised an Objection by the Bishop of Worcester, as if our Author’s Doctrine here concerning *Ideas*, had almost discarded *Substance* out of the *World*. His Words in this second Paragraph, being brought to prove, that he is one of

*Of the Sorts of
Substances.*

§. 3. An obscure and relative Idea of Substance, in general, being thus made, we come to have the Ideas of particular Sorts of Substances, by collecting such Combinations of simple Ideas, as are, by Experience, and Observation of Mens Senses, taken Notice of, to exist together, and are, therefore, supposed to flow from the particular, internal Constitution, or unknown Essence of that Substance. Thus we come to have the Ideas of a Man, Horse, Gold, Water, &c. of which Substances, whether any one has any other clear Idea, farther than of certain simple Ideas co-existing

the Gentlemen of this new Way of Reasoning, that have almost discarded Substance out of the reasonable part of the World.

* In his first Letter to the Bishop is an Accusation, which your Lordship will pardon me, if I do not readily know what to plead to, because I do not understand what is almost to discard

Substance out of the reasonable Part of the World. If your Lordship means by it, That I deny, or doubt, that there is in the World any such Thing as Substance, that your Lordship will acquit me of, when your Lordship looks again in this 23d Chapter of the second Book, which you have cited more than once; where you will find these Words, §. 4. ‘When we talk, or think of any particular Sort of corporeal Substances, as Horse, Stone, &c. tho’ the Idea we have of either of them, be but the Complication, or Collection of those several simple Ideas of sensible Qualities, which we use to find united in the Thing called Horse, or Stone; yet, because we cannot conceive how they should subsist alone, nor one in another, we suppose them existing in, and supported by some common Subject; which Support we denote by the Name Substance; tho’ it be certain, we have no clear, or distinct Idea of that Thing we suppose a Support.’ And again, §. 5. ‘The same happens concerning the Operations of the Mind, viz. Thinking, Reasoning, Fearing, &c. which we considering not to subsist of themselves, nor apprehending how they can belong to Body, or be produced by it, are apt to think those the Actions of some other Substance, which we call Spirit; whereby yet it is evident, that having no other Idea, or Notion of Matter, but something wherein those many simple Qualities, which affect our Senses, do subsist, by supposing a Substance, wherein Thinking, Knowing, Doubting, and a Power of Moving, &c. do subsist, we have as clear a Notion of the Nature, or Substance of Spirit, as we have of a Body: tho’ one being supposed to be (without knowing what it is) the Substratum of those simple Ideas we have from without; and the other supposed (with a like Ignorance of what it is) to be the Substratum to those Operations, which we experiment in

isting together, I appeal to every one's own Experience. 'Tis the ordinary Qualities observable in Iron, or a Diamond, put together, that make the true complex *Idea* of those Substances, which a Smith, or a Jeweller, commonly knows better than a Philosopher; who, whatever substantial Forms he may talk of, has no other *Idea* of those Substances, than what is framed by a Collection of those simple *Ideas*, which are to be found in them: Only we must take notice, that our complex *Ideas* of Substances, besides all those simple *Ideas* they are made up of, have always the confused *Idea* of something, to which they belong, and in which

'in ourselves within.' And again, §. 6. 'Whatever, therefore, be the secret Nature of Substance in general, all the Ideas we have of particular, distinct Substances, are nothing but several Combinations of simple Ideas, co-existing in such, tho' unknown, Causes of their Union, as makes the whole subsist of it self.' And I farther say, in the same Section, 'That we suppose these Combinations to rest in, and to be adherent to that unknown, common Subject, which inheres not in any Thing else. And our complex Ideas of Substances, besides all those simple Ideas they are made up of, have always the confused Idea of something to which they belong, and in which they subsist; and, therefore, when we speak of any Sort of Substance, we say it is a Thing, having such and such Qualities; a Body is a Thing that is extended, figured, and capable of Motion; a Spirit, a Thing capable of Thinking.'

THESE, and the like Fashions of speaking, intimate, That the Substance is supposed always something, besides the Extension, Figure, Solidity, Motion, Thinking, or other observable *Idea*, tho' we know not what it is.

Our *Idea* of Body, I say, † is an extended, 'solid Substance; and our *Idea* of our Souls, is of a Substance that thinks.' So that as long as there is any such Thing as Body, or Spirit in the World, I have done nothing towards the discarding Substance out of the reasonable Part of the World. Nay, as long as there is any simple *Idea*, or sensible Quality left, according to my Way of Arguing, Substance cannot be discarded, because all simple *Ideas*, all sensible Qualities, carry with them a Supposition of a *Substratum* to exist in, and of a Substance where they inherc; and of this that whole Chapter is so full, that I challenge any one who reads it, to think I have almost, or one jot discarded Substance out of the reasonable Part of the World. And of this, *Man*, *Horse*, *Sun*, *Water*, *Iron*, *Diamond*, &c. which I have mentioned of distinct Sorts of Substances, will be my Witnesses as long as any such Things remain in Being; of which I say,

† B. II.
C. 23. §. 22.

* 'That

which they subsist. And, therefore, when we speak of any Sort of Substance, we say it is a *Thing* having such or such Qualities; as Body is a *Thing* that is extended, figured, and capable of Motion; a Spirit, a *Thing* capable of thinking; and so Hardness, Friability, and Power to draw Iron, we say, are Qualities to be found in a Loadstone. These, and the like Fashions of speaking, intimate, that the Substance is supposed always *something* besides the Extension, Figure, Solidity, Motion, Thinking, or other observable *Ideas*, tho' we know not what it is.

§. 4. HENCE,

* *B. II. C. 12. §. 6.* * 'That the Ideas of Substances are such Combinations of simple Ideas, as are taken to represent distinct particular Things subsisting by themselves, in which the supposed, or confused Idea of Substance is always the first and chief.'

If by almost discarded Substance out of the reasonable Part of the World, your Lordship means, that I have destroyed, and almost discarded the true Idea we have of it, by calling it a *Substratum*,

* *B. II. C. 23. §. 1. §. 2. §. 3. + B. II. C. 13. §. 19.* * a Supposition of we know not what Support of such Qualities as are capable of producing simple Ideas in us, an obscure, relative Idea. + That without knowing what it is, it is that which supports Accidents; so that of Substance we have no Idea of what it is, but only a confus'd, obscure one, of what it does.

I must confess, this, and the like I have said of our Idea of Substance; and should be very glad to be convinced by your Lordship, or any body else, that I have spoken too meanly of it. He that would shew me a more clear, and distinct Idea of Substance, would do me a Kindness I should thank him for. But this is the best I can hiterto find, either in my own Thoughts, or in the Books of Logicians: For their Account, or Idea of it is, that it is *Ens*, or *Res per se subsistens*, & *substantia accidentibus*; which, in effect, is no more but that Substance is a *Being*, or *Thing*; or, in short, *something*, they know not what, or of which they have no clearer Idea, than that it is *something* which supports Accidents, or other simple Ideas, or Modes, or an Accident. So that I do not see but *Burgersdicius*, *Sanderson*, and the whole Tribe of Logicians, must be reckon'd with the Gentlemen of this new Way of Reasoning, who have almost discarded Substance out of the reasonable Part of the World.

BUT supposing, my Lord, that I, or these Gentlemen, Logicians of Note in the Schools, should own that we have a very imperfect, obscure, inadequate Idea of Substance, would it not be a little too hard to charge us with discarding Substance out of the World? For what *alone*! discarding, and *reasonable* Part of the World, signifies, I must

§. 4. HENCE, when we talk, or think, of any particular Sort of corporeal Substances, as *Horse*, *Stone*, &c. tho' the Idea we have of either of them, be but the Complication, or Collection of those several simple Ideas of sensible Qualities, which we use to find united in the Thing called *Horse*, or *Stone*; yet, because we cannot conceive how they should subsist alone, nor one in another, we suppose them existing in, and supported by some common Subject; which Support, we denote by the Name *Substance*; tho' it

*No clear Idea
of Substance in
general.*

I must confess, I do not clearly comprehend; but let *almost*, and *reasonable Part* signify here what they will, for I dare say, your Lordship meant something by them; would not your Lordship think you were a little hardly dealt with, if for acknowledging yourself to have a very imperfect and inadequate Idea of God, or of several other Things which in this very Treatise you confess our Understandings come short in, and cannot comprehend, you should be accused to be one of those Gentlemen that have *almost discarded* God, or those other mysterious Things, whereof you contend we have very imperfect and inadequate Ideas, *out of the reasonable World?* For I suppose your Lordship means by *almost discarding out of the reasonable World*, something that is blameable, for it seems not to be inserted for a Commendation; and yet, I think, he deserves no Blame, who owns the having imperfect, inadequate, obscure Ideas, where he has no better: However, if it be inferr'd from thence, that either he *almost excludes* those Things out of Being, or out of rational Discourse, if that be meant by *the reasonable World*; for the first of these will not hold, because the Being of Things in the World depends not on our Ideas: The latter, indeed, is true, in some Degree, but is no Fault; for it is certain, that where we have imperfect, inadequate, confus'd, obscure Ideas, we cannot discourse and reason about those Things so well, fully, and clearly, as if we had perfect, adequate, clear, and distinct Ideas.

OTHER Objections are made against the following Parts of this Paragraph by that Reverend Prelate, viz. The Repetition of the Story of the Indian Philosopher, and the talking like Children about Substance: To which our Author replies:

YOUR Lordship, I must own, with great Reason, takes notice, that I parallel'd, more than once, our Idea of Substance, with the Indian Philosopher's he-knew-not-what supported the Tortoise, &c.

THIS Repetition is, I confess, a Fault in exact Writing: But I having acknowledged, and excused it in these Words in my Preface; '*I am not ignorant, how little I herein consult my own Reputation, when I knowingly let my F_{ig}s go with a Fault, so apt to disgust the most judicious,*

it be certain we have no clear, or distinct *Idea* of that *Thing* we suppose a Support.

As clear an Idea of Spirit as Body.

§. 5. THE same happens concerning the Operations of the Mind, *viz.* Thinking, Reasoning, Fearing, &c. which we concluding not to subsist of themselves, nor apprehending how they can belong to Body, or be produced by it, we are apt to think these the Actions of some other *Substance*, which we call Spirit: Whereby yet it is evident, that having no other *Idea*, or Notion of Matter, but something, wherein those many sensible Qualities, which affect our

'dicious, who are always the *nicest Readers.*' And there farther add, 'That I did not publish my *Essay* for such great Masters of Knowledge, as your Lordship; but fitted it to Men of my own size, to whom Repetitions might be sometimes useful.' It would not, therefore, have been besides your Lordship's Generosity (who were not intended to be provoked by this Repetition) to have passed by such a Fault, as this, in one, who pretends not beyond the lower Rank of Writers. But I see your Lordship would have me exact, and without any Faults; and I wish I could be so, the better to deserve your Lordship's Approbation.

My Saying, 'That when we talk of Substance, we talk like Children; who being ask'd a Question about something, which they know not, readily give this satisfactory Answer, That it is something;' your Lordship seems mightily to lay to Heart, in these Words that follow; If this be the Truth of the Case, we must still talk like Children, and I know not how it can be remedied. For, if we cannot come at a rational Idea of Substance, we can have no Principle of Certainty to go upon, in this Debate.

If your Lordship has any better and distincter *Idea* of Substance than mine is, which I have given an Account of, your Lordshp is not at all concern'd in what I have there said. But those, whose *Idea* of Substance, whether a *rational*, or not rational *Idea*, is like mine, something, they know not what, must in that, with me, talk like Children, when they speak of something they know not what. For a Philosopher, that says, That which supports Accidents, is something, he knows not what; and a Countryman that says, The Foundation of the great Church at *Harlem*, is supported by something, he knows not what; and a Child, that stands in the Dark, upon his Mother's Muff, and says, he stands upon something, he knows not what, in this respect talk all three alike. But if the Countryman knows, that the Foundation of the Church at *Harlem* is supported by a Rock, as the Houses about *Bristol* are; or by Gravel, as the Houses about *London* are; or by wooden Piles, as the Houses in *Amsterdam* are; it

our Senses, do subsist; by supposing a Substance, wherein *Thinking*, *Knowing*, *Doubting*, and a Power of moving, &c. do subsist, we have as clear a Notion of the Substance of Spirit, as we have of Body: The one being supposed to be (without knowing what it is) the *Substratum* to those simple Ideas we have from without; and the other supposed (with a like Ignorance of what it is) to be the *Substratum* to those Operations we experiment in ourselves within. It is plain then, that the *Idea* of corporeal Substance in Matter, is as remote from our Conceptions and Apprehensions, as that of spiritual Substance, or *Spirit*: And, therefore, from our not having any Notion of the Substance of Spirit, we can no more conclude its Non-existence, than we can, for the same Reason, deny the Existence of Body; it being as rational

to

is plain, that then, having a clear and distinct *Idea* of the Thing, that supports the Church, he does not talk of this Matter as a Child; nor will he, of the support of Accidents, when he has a clearer and more distinct *Idea* of it, than that it is barely *something*. But as long as we think like Children, in Cafes, where our *Ideas* are no clearer, nor distincter than theirs, I agree with your Lordship, that *I know not how it can be remedied*, but that we must talk like them.

FARTHER, the Bishop asks, Whether there be no Difference between the bare Being of a Thing, and its Subsistence by itself? To which our Author answers, Yes. But what will that do to prove, that upon my Principles we can come to no Certainty of Reason, that there is any such Thing as Substance? You seem, by this Question, to conclude, That the *Idea* of a Thing that subsists by itself, is a clear and distinct *Idea* of Substance: But I beg Leave to ask, Is the *Idea* of the Manner of Subsistence of a Thing, the *Idea* of the Thing itself? If it be not, we may have a clear and distinct *Idea* of the Manner, and yet have none but a very obscure and confused one of the Thing. For Example; I tell your Lordship, that I know a Thing that cannot subsist without a Support, and I know another Thing that does subsist without a Support, and say no more of them: Can you, by having the clear and distinct *Ideas* of having a Support, and not having a Support, say, that you have a clear and distinct *Idea* of the Thing that I know which has, and of the Thing that I know which has not a Support? If your Lordship can, I beseech you, to give me the clear and distinct *Ideas* of these, which I only call, by the general Name, Things, that have, or have not Supports: For such there are, and such I shall give your Lordship clear and distinct *Ideas* of, when you shall please to call upon me

to affirm there is no Body, because we have no clear and distinct *Idea* of the *Substance* of Matter, as to say there is no Spirit, because we have no clear and distinct *Idea* of the *Substance* of a Spirit.

Of the Sorts of Substances. §. 6. WHATEVER, therefore, be the secret, abstract Nature of *Substance* in general, all the Ideas we have of particular distinct Sorts of *Substances*, are nothing but several Combinations of simple *Ideas*, co-existing in such, tho' unknown, Cause of their Union, as makes the whole to subsist of itself. It is by such Combinations of simple *Ideas*, and nothing else, that we represent particular Sorts of *Substances* to ourselves; such are the *Ideas* we have of their several Species in our Minds; and such only do we, by their

me for them; tho' I think your Lordship will scarce find them, by the general and confused *Idea* of Things, nor in the clearer and more distinct *Idea* of having, or not having a Support.

To shew a Blind Man, that he has no clear and distinct *Idea* of Scarlet, I tell him, that his Notion of it, that it is a *Thing*, or *Being*, does not prove he has any clear, or distinct *Idea* of it; but barely, that he takes it to be something, he knows not what. He replies, That he knows more than that, v. g. he knows that it subsists, or inheres, in another *Thing*: *And is there no Difference*, says he, in your Lordship's Words, between the bare *Being* of a *Thing*, and its *Subsistence* in another? Yes, say I to him, a great deal; they are very different *Ideas*. But, for all that, you have no clear and distinct *Idea* of Scarlet, not such a one as I have, who see, and know it, and have another Kind of *Idea* of it, besides that of Inherence.

Your Lordship has the *Idea* of *Subsisting* by itself, and, therefore, you conclude, you have a clear and distinct *Idea* of the *Thing*, that *Subsists* by itself; which, methinks, is all one, as if your Countryman should say, he hath an *Idea* of a Cedar of Lebanon, that it is a Tree of a nature to need no Prop to lean on for its Support; therefore, he hath a clear and distinct *Idea* of a Cedar of Lebanon; which clear and distinct *Idea*, when he comes to examine, is nothing but a general one of a Tree, with which his indetermin'd *Idea* of a Cedar is confounded. Just so is the *Idea* of *Substance*; which, however called clear and distinct, is confounded with the general, indetermin'd *Idea* of something. But suppose that the Manner of subsisting by itself, give us a clear and distinct *Idea* of Substance, how does that prove, *That, upon my Principles, we can come to no Certainty of Reason, that there is any such Thing as Substance in the World?* Which is the Proposition to be proved.

their Specific Names, signify to others, *v. g. Man, Horse, Sun, Water, Iron*: Upon hearing which Words, every one, who understands the Language, frames in his Mind a Combination of those several simple *Ideas*, which he has usually observed, or fancied to exist together under that Denomination; all which he supposes to rest in, and be, as it were, adherent to that unknown, common Subject, which inheres not in any Thing else. Tho' in the mean time it be manifest, and every one, upon enquiry into his own Thoughts will find, that he has no other *Idea* of any *Substance*, *v. g. let it be Gold, Horse, Iron, Man, Vitriol, Bread*, but what he has barely of those sensible Qualities, which he supposes to inhere, with a Supposition of such a *Substratum*, as gives, as it were, a Support to those Qualities, or simple *Ideas*, which he has observed to exist united together. Thus the *Idea* of the *Sun*, What is it but an Aggregate of those several, simple *Ideas*, Bright, Hot, Roundish, having a constant, regular Motion, at a certain Distance from us, and, perhaps, some other? As he who thinks and discourses of the *Sun*, has been more, or less accurate, in observing those sensible Qualities, *Ideas*, or Properties, which are in that Thing, which he calls the *Sun*.

§. 7. For he has the perfectest *Idea* of any of the particular Sorts of *Substances*, who has gather'd and put together most of those simple *Ideas*, which do exist in it, among which are to be reckoned its active Powers, and passive Capacities; which, tho' not simple *Ideas*, yet, in this respect, for Brevity's sake, may conveniently enough be reckoned amongst them. Thus the Power of drawing Iron, is one of the *Ideas* of the complex one of that Substance we call a *Loadstone*; and a Power to be so drawn, is a Part of the complex one we call *Iron*; which Powers pass for inherent Qualities in those Subjects. Because every *Substance* being as apt, by the Powers we observe in it, to change some sensible Qualities in other Subjects, as it is to produce in us those simple *Ideas* which we receive immediately from it, does, by those new sensible Qualities, introduced into other Subjects, discover to us those Powers, which do thereby mediately affect our Senses, as regularly as its sensible Qualities

*Power, a great
Part of our
complex Ideas
of Substances.*

do it immediately: *V.g.* we immediately, by our Senses, perceive in *Fire* its Heat and Colour; which are, if rightly considered, nothing but Powers in it, to produce those *Ideas* in us: We also, by our Senses, perceive the Colour and Brittleness of *Charcoal*, whereby we come by the Knowledge of another Power in *Fire*; which it has to change the Colour and Consistency of *Wood*. By the former, *Fire* immediately; by the latter, it mediately discovers to us these several Powers, which, therefore, we look upon to be a Part of the Qualities of *Fire*, and so make them a Part of the complex *Ideas* of it. For all those Powers, that we take Cognizance of, terminating only in the Alteration of some sensible Qualities, in those Subjects, on which they operate, and so making them exhibit to us new sensible *Ideas*; therefore it is, that I have reckoned these Powers amongst the simple *Ideas*, which make the complex ones of the Sorts of *Substances*; tho' these Powers, considered in themselves, are truly complex *Ideas*. And, in this looser Sense, I crave leave to be understood, when I name any of these *Potentialities amongst the simple Ideas*, which we recollect in our Minds, when we think of particular *Substances*. For the Powers that are severally in them, are necessary to be consider'd, if we will have true, distinct Notions of the several sorts of *Substances*.

And why. §. 8. Nor are we to wonder, that Powers make a great Part of our complex Ideas of *Substances*; since their secondary Qualities are those, which, in most of them, serve principally to distinguish *Substances* one from another, and commonly make a considerable Part of the complex *Idea* of the several sorts of them. For our Senses failing us, in the Discovery of the Bulk, Texture and Figure of the minute Parts of Bodies, on which their real Constitutions and Differences depend, we are fain to make use of their secondary Qualities, as the characteristical Notes and Marks, whereby to frame *Ideas* of them in our Minds, and distinguish them one from another: All which secondary Qualities, as has been shewn, are nothing but bare Powers. For the Colour and Taste of *Opium*, are, as well as its soporific, or anodyne Virtues, mere Powers depending on its

its primary Qualities, whereby it is fixed to produce different Operations on different Parts of our Bodies.

§. 9. THE Ideas that make our complex ones of corporeal Substances, are of these three sorts.: *Three sorts of Ideas make our complex ones of Substances.*
First, The Ideas of the primary Qualities of Things, which are discover'd by our Senses, and are in them, even when we perceive them not; such are the Bulk, Figure, Number, Situation, and Motion of the Parts of Bodies, which are really in them, whether we take notice of them, or no. *Secondly*, The sensible, secondary Qualities, which depending on these, are nothing but the Powers those Substances have to produce several Ideas in us by our Senses; which Ideas are not in the Things themselves, otherwise than as any Thing is in its Cause. *Thirdly*, The Aptness we consider in any Substance to give, or receive such Alterations of primary Qualities, as that the Substance so alter'd, should produce in us different Ideas from what it did before; these are called Active and Passive Powers: All which Powers, as far as we have any notice, or notion of them, terminate only in sensible, simple Ideas. For, whatever Alteration a Leadstone has the Power to make, in the minute Particles of Iron, we should have no Notion of any Power it had at all to operate on Iron, did not its sensible Motion discover it: And I doubt not, but there are a thousand Changes, that Bodies we daily handle have a Power to cause in one another, which we never suspect, because they never appear in sensible Effects.

§. 10. POWERS, therefore, justly make a great Part of our complex Ideas of Substances. He that will examine his complex Idea of Gold, will find several of its Ideas, that make it up, to be only Powers; as the Power of being melted, but of not spending itself in the Fire; of being dissolved in *Aq. Regia*, are Ideas, as necessary to make up our complex Idea of Gold, as its Colour and Weight; which, if duly considered, are also nothing but different Powers. For to speak truly, Yellowness is not actually in Gold; but is a Power in Gold to produce that Idea in us by our Eyes, when placed in a due Light: And the Heat, which we cannot leave out of our Idea of the Sun, is no

Powers make a great Part of our complex Ideas of Substances.

more

more really in the Sun, than the white Colour it introduces into Wax. These are both equally Powers in the Sun, operating, by the Motion and Figure of its insensible Parts, so on a Man, as to make him have the *Idea* of Heat; and so on Wax, as to make it capable to produce in a Man the *Idea* of White.

The now secondary Qualities of Bodies would disappear, if we could discover the primary ones of their minute Parts.

§. 11. HAD we Senses acute enough to discern the minute Particles of Bodies, and the real Constitution, on which their sensible Qualities depend, I doubt not but they would produce quite different *Ideas* in us; and that, which is now the yellow Colour of Gold, would then disappear; and, instead of it, we should see an admirable Texture of Parts of a certain Size and Figure. This Microscope plainly discover to us: For what to our naked Eyes produces a certain Colour, is, by thus augmenting the Acuteness of our Senses, discovered to be quite a different thing; and thus altering, as it were, the Proportion of the Bulk of the minute Parts of a colour'd Object to our usual Sight, produces different *Ideas* from what it did before. Thus Sand, or pound'd Glas, which is opake, and white to the naked Eye, is pellucid in a Microscope; and a Hair, seen this way, loses its former Colour, and is in a great Measure pellucid, with a Mixture of some bright, sparkling Colours, such as appear from the Refraction of Diamonds, and other pellucid Bodies. Blood, to the naked Eye, appears all red; but by a good Microscope, wherein its lesser Parts appear, shews only some few Globules of Red, swimming in a pellucid Liquor; and how these red Globules, would appear, if Glasses could be found that yet could magnify them 1000, or 10,000 times more, is uncertain.

*Our Faculties
of Discovery
suited to our
State.*

§. 12. THE infinitely wise Contriver of us, and all Things about us, hath fitted our Senses, Faculties, and Organs, to the Conveniences of Life, and the Business we have to do here. We are able, by our Senses, to know and distinguish Things; and to examine them so far, as to apply them to our Uses, and several ways to accomodate the Exigencies of this Life. We have Insight enough into their admirable Contrivances, and wonderful Effects,

Effects, to admire and magnify the Wisdom, Power, and Goodness of their Author. Such a Knowledge as this, which is suited to our present Condition, we want not Faculties to attain. But it appears not, that God intended we should have a perfect, clear, and adequate Knowledge of them: That, perhaps, is not in the Comprehension of any finite Being. We are furnish'd with Faculties (dull and weak as they are) to discover enough in the Creatures, to lead us to the Knowledge of the Creator, and the Knowledge of our Duty; and we are fitted well enough with Abilities, to provide for the Conveniences of living: These are our Business in this World. But were our Senses alter'd, and made much quicker and acuter, the Appearance and outward Scheme of Things would have quite another Face to us; and, I am apt to think, would be inconsistent with our Being, or at least Well-being, in this Part of the Universe, which we inhabit. He that considers how little our Constitution is able to bear a Remove into Parts of this Air, not much higher than that we commonly breathe in, will have reason to be satisfied, that in this Globe of Earth, allotted for our Mansion, the All-wise Architect has suited our Organs, and the Bodies that are to affect them, one to another. If our Sense of Hearing were but 1000 times quicker than it is, how would a perpetual Noise distract us? And we should, in the quietest Retirement, be less able to sleep, or meditate, than in the middle of a Sea-fight. Nay, if that most instructive of our Senses, Seeing, were in any Man 1000, or 100,000 times more acute, than it is now by the best Microscope, Things several Millions of times less than the smallest Object of his Sight now, would then be visible to his naked Eyes, and so he would come nearer the Discovery of the Texture and Motion of the minute Parts of corporeal Things; and in many of them probably get *Ideas* of their internal Constitutions. But then he would be in a quite different World from other People: Nothing would appear the same to him, and others; the visible *Ideas* of every thing would be different. So that I doubt, whether he and the rest of Men could discourse concerning the Objects of Sight, or have any Communication about Colours, their Appearances being so wholly different. And, perhaps, such a Quickness

ness and Tenderness of Sight could not endure bright Sun-shine, or so much as open Day-light, nor take in but a very small Part of any Object at once, and that too only at a very near distance. And if, by the help of such microscopical Eyes, (if I may so call them) a Man could penetrate farther than ordinary, into the secret Composition, and radical Texture of Bodies, he would not make any great Advantage by the Change, if such an acute Sight would not serve to conduct him to the Market and Exchange; if he could not see Things he was to avoid, at a convenient Distance, nor distinguish Things he had to do with, by those sensible Qualities others do. He that was sharp-sighted enough to see the Configuration of the minute Particles of the Spring of a Clock, and observe upon what peculiar Structure and Impulse its elastic Motion depends, would no doubt discover something very admirable: But if Eyes so framed, could not view at once the Hand, and the Characters of the Hour-plate, and thereby at a distance see what a-clock it was, their Owner could not be much benefited by that Acuteness; which, whilst it discovered the secret Contrivance of the Parts of the Machine, made him lose its Use.

Conjecture about Spirits.

§. 13. AND here give me leave to propose an extravagant Conjecture of mine, *viz.* That since we have some reason (if there be any Credit to be given to the Report of Things, that our Philosophy cannot account for) to imagine, that Spirits can assume to themselves Bodies of different Bulk, Figure, and Conformation of Parts; whether one great Advantage, some of them have over us, may not lie in this, that they can so frame and shape to themselves Organs of Sensation, or Perception, as to suit them to their present Design, and the Circumstances of the Object they would consider? For how much would that Man exceed all others in Knowledge, who had but the Faculty so to alter the Structure of his Eyes, that one Sense, as to make it capable of all the several degrees of Vision, which the Assistance of Glasses (casually at first light on) has taught us to conceive? What Wonders would he discover, who could so fit his Eyes to all sorts of Objects, as to see, when he pleased, the Figure and Motion of the minute

minute Particles in the Blood, and other Juices of Animals, as distinctly as he does, at other times, the Shape and Motion of the Animals themselves? But to us, in our present State, unalterable Organs, so contrived, as to discover the Figure and Motion of the minute Parts of Bodies, whereon depend those sensible Qualities we now observe in them, would, perhaps, be of no Advantage. God has, no doubt, made them so, as is best for us in our present Condition. He hath fitted us for the Neighbourhood of the Bodies that surround us, and we have to do with: And tho' we cannot, by the Faculties we have, attain to a perfect Knowledge of Things, yet they will serve us well enough for those Ends above-mention'd, which are our great Concernment. I beg my Reader's Pardon, for laying before him so wild a Fancy, concerning the ways of Perception in Beings above us: But how extravagant soever it be, I doubt, whether we can imagine any thing about the Knowledge of Angels, but after this manner, some way or other, in Proportion to what we find and observe in ourselves. And tho' we cannot but allow, that the infinite Power and Wisdom of God, may frame Creatures, with a thousand other Faculties and ways of perceiving Things without them, than what we have; yet our Thoughts can go no farther than our own: So impossible it is for us to enlarge our very Guesses, beyond the *Ideas* received from our own Sensation and Reflexion. The Supposition, at least, that Angels do sometimes assume Bodies, need not startle us; since some of the most ancient and most learned Fathers of the Church seemed to believe, that they had Bodies: And this is certain, that their State, and way of Existence, is unknown to us.

§. 14. BUT to return to the Matter in hand: The *Ideas* we have of Substances, and the ways we come by them; I say, our *Specific Ideas of Substances* are nothing else but a *Collection of a certain Number of simple Ideas, considered as united in one Thing*. These *Ideas of Substances*, tho' they are commonly called simple Apprehensions, and the Names of them simple Terms; yet, in effect, are complex and compounded. Thus the *Idea*, which an Englishman signifies by the Name *Swan*, is white Colour, long Neck, red

red Beak, black Legs, and whole Feet, and all these of a certain Size, with a Power of swimming in the Water, and making a certain kind of Noise; and, perhaps, to a Man, who has long observed those kind of Birds, some other Properties, which all terminate in sensible, simple *Ideas*, all united in one common Subject.

*Idea of spiritual Substances,
as clear as of
bodily Substances.*

§. 15. BESIDES the Complex *Ideas* we have of material, sensible Substances, of which I have last spoken, by the simple *Ideas* we have taken from those Operations of our own Minds, which we experiment daily in ourselves, as Thinking, Understanding, Willing, Knowing, and Power of beginning Motion, &c. co-existing in some Substance; we are able to frame the complex Idea of an immaterial Spirit. And thus, by putting together the Ideas of Thinking, Perceiving, Liberty, and Power of moving themselves, and other Things, we have as clear a Perception and Notion of immaterial Substances, as we have of material. For putting together the *Ideas* of Thinking and Willing, or the Power of moving, or quieting corporeal Motion, joined to Substance, of which we have no distinct *Idea*, we have the *Idea* of an immaterial Spirit; and by putting together the *Ideas* of coherent, solid Parts, and a Power of being moved, joined with Substance, of which likewise we have no positive *Idea*, we have the *Idea* of Matter. The one is as clear and distinct an *Idea*, as the other: The *Idea* of Thinking, and moving a Body, being as clear and distinct *Ideas*, as the *Ideas* of Extension, Solidity, and being moved. For our *Idea* of Substance is equally obscure, or none at all in both; it is but a supposed, I know not what, to support those *Ideas* we call Accidents. It is for want of Reflexion, that we are apt to think, that our Senses shew us nothing but material Things. Every Act of Sensation, when duly considered, gives us an equal View of both Parts of Nature, the Corporeal and Spiritual. For, whilst I know, by Seeing, or Hearing, &c. that there is some corporeal Being without me, the Object of that Sensation; I do more certainly know, that there is some Spiritual Being within me, that sees and hears. This, I must be convinced, cannot be the Action

on of bare insensible Matter ; nor ever could be, without an immaterial, thinking Being.

§. 16. By the complex Idea of extended, figured, coloured, and all other sensible Qualities, which is all that we know of it, we are as far from the Idea of the Substance of Body, as if we knew nothing at all : *Nor*, after all the Aequaintance and Familiarity, which we imagine we have with Matter, and the many Qualities Men assure themselves they perceive, and know in Bodies, will it, perhaps, upon Examination, be found, that they have any *more*, or *clearer*, primary Ideas, belonging to Body, than they have belonging to immaterial Spirit.

No Idea of abstract Substance.

§. 17. THE primary Ideas we have, peculiar to Body, as contra-distinguished to Spirit, are the Cohesion of solid, and consequently separable Parts, and a Power of communicating Motion by Impulse. These, I think, are the original Ideas proper and peculiar to Body ; for Figure is but the Consequence of finite Extension.

The Cohesion of solid Parts and Impulse, the primary Ideas of Body.

§. 18. THE Ideas we have belonging, and peculiar to Spirit, are Thinking, and Will, or a Power of putting Body into Motion by Thought, and, which is consequent to it, Liberty. For as Body cannot but communicate its Motion by Impulse to another Body, which it meets with at Rest; so the Mind can put Bodies into Motion, or forbear to do so, as it pleases. The Ideas of Existence, Duration, and Mobility, are common to them both.

Thinking and Motivity, the primary Ideas of Spirit.

§. 19. THERE is no Reason why it should be thought strange, that I make Mobility belong to Spirit. For having no other Idea of Motion, but Change of Distance, with other Beings, that are considered as at rest ; and finding, that Spirits, as well as Bodies, cannot operate but where they are, and that Spirits do operate at several Times, in several Places, I cannot but attribute Change of Place to all finite Spirits ; (for of the infinite Spirit I speak not here.) For my Soul, being a real Being, as well as my Body, is certainly as capable of changing Distance with any other Body,

Spirits capable of Motion.

or Being, as Body itself, and so is capable of Motion. And if a Mathematician can consider a certain Distance, or a Change of that Distance, between two Points, one may certainly conceive a Distance, and a Change of Distance between two Spirits ; and so conceive their Motion, their Approach, or Removal, one from another.

§. 20. EVERY one finds in himself, that his Soul can think, will, and operate on his Body, in the Place where that is ; but cannot operate on a Body, or in a Place, an hundred Miles distant from it. No body can imagine, that his Soul can think, or move a Body at *Oxford*, whilst he is at *London*; and cannot but know, that being united to his Body, it constantly changes Place all the whole Journey, between *Oxford* and *London*, as the Coach, or Horse, does that carries him ; and, I think, may be said to be truly all that while in Motion, or if that will not be allowed to afford us a clear *Idea* enough of its Motion, its being separated from the Body in Death, I think, will : For to consider it as going out of the Body, or leaving it, and yet to have no *Idea* of its Motion, seems to me impossible.

§. 21. If it be said by any one, that it cannot change Place, because it hath none, for Spirits are not *in Loco*, but *Ubi*; I suppose that way of talking will not now be of much weight to many, in an Age that is not much disposed to admire, or suffer themselves to be deceived by such unintelligible ways of speaking. But if any one thinks there is any Sense in that Distinction, and that it is applicable to our present Purpose, I desire him to put it into intelligible *English*; and then from thence draw a Reason to shew, that immaterial Spirits are not capable of Motion. Indeed, Motion cannot be attributed to G O D ; not because He is an immaterial, but because He is an infinite Spirit.

*Idea of Soul
and Body com-
pared.*

§. 22. LET US compare then our complex *Idea* of an immaterial Spirit, with our complex *Idea* of Body, and see whether there be any more Obscurity in one than in the other, and in which most. Our *Idea* of Body, as I think, is an extended, solid Substance, capable of communicating Motion by Impulse : And our *Idea*

Idea of our Soul, as an immaterial Spirit, is of a Substance that thinks, and has a Power of exciting Motion in Body, by Willing, or Thought. These, I think, are *our complex Ideas of Soul and Body, as contra-distinguished*; and now let us examine, which has most Obscurity in it, and Difficulty to be apprehended. I know, that People, whose Thoughts are immersed in Matter, and have so subjected their Minds to their Senses, that they seldom reflect on any thing beyond them, are apt to say, they cannot comprehend a thinking Thing, which, perhaps, is true: But I affirm, when they consider it well, they can no more comprehend an extended Thing.

§. 23. If any one say, he knows not what 'tis thinks in him, he means, he knows not what the Substance is of that thinking Thing: No more, say I, knows he what the Substance is of that solid Thing. Farther, if he says, he knows not how he thinks; I answer, Neither knows he how he is extended; how the solid Parts of Body are united, or cohere together to make Extension. For, tho' the Pressure of the Particles of Air may account for the *Cohesion of several Parts of Matter*, that are grosser than the Particles of Air, and have Pores less than the Corpuscles of Air; yet the Weight, or Pressure of the Air, will not explain, nor can be a Cause of the Coherence of the Particles of Air themselves. And if the Pressure of the Æther, or any subtler Matter than the Air, may unite, and hold fast together the Parts of a Particle of Air, as well as other Bodies; yet it cannot make Bonds for itself, and hold together the Parts, that make up every least Corpuscle of that *Materia subtilis*. So that That Hypothesis, how ingeniously soever explained, by shewing, that the Parts of sensible Bodies are held together by the Pressure of other external, insensible Bodies, reaches not the Parts of the Æther itself; and by how much the more evident it proves, that the Parts of other Bodies are held together by the external Pressure of the Æther, and can have no other conceivable Cause of their Cohesion and Union, by so much the more it leaves us in the dark concerning the Cohesion of the Parts of the Corpuscles of the Æther itself; which

Cohesion of solid Parts in Body, as hard to be conceived, as Thinking in a Soul.

we can neither conceive without Parts, they being Bodies, and divisible; nor yet how their Parts cohere, they wanting that Cause of Cohesion, which is given of the Cohesion of the Parts of all other Bodies.

§. 24. But in truth, *the Pressure of any ambient Fluid*, how great soever, *can be no intelligible Cause of the Cohesion of the solid Parts of Matter*. For, tho' such a Pressure may hinder the Avulsion of two polished Superficies one from another, in a Line perpendicular to them, as in the Experiment of two polished Marbles; yet it can never, in the least, hinder the Separation by a Motion, in a Line parallel to those Surfaces: Because the ambient Fluid, having a full Liberty to succeed in each Point of Space, deserted by a lateral Motion, resists such a Motion of Bodies, so joined, no more than it would resist the Motion of that Body, were it on all Sides environ'd by that Fluid, and touched no other Body: And, therefore, if there were no other Cause of Cohesion, all Parts of Bodies must be easily separable by such a lateral, sliding Motion. For, if the Pressure of the Æther be the adequate Cause of Cohesion, wherever that Cause operates not, there can be no Cohesion. And since it cannot operate against such a lateral Separation, (as has been shewn) therefore, in every imaginary Plane, intersecting any Mass of Matter, there could be no more Cohesion, than of two polished Surfaces, which will always, notwithstanding any imaginary Pressure of a Fluid, easily slide one from another. So that, perhaps, how clear an Idea soever we think we have of the Extension of Body, which is nothing but the Cohesion of solid Parts, he that shall well consider it in his Mind, may have Reason to conclude, That 'tis *as easy* for him to have a clear Idea, *how the Soul thinks, as how the Body is extended*. For since Body is no farther, nor otherwise extended, than by the Union and Cohesion, of its solid Parts, we shall very ill comprehend the Extension of Body, without understanding wherein consists the Union and Cohesion of its Parts; which seems to me as incomprehensible, as the manner of Thinking, and how it is performed.

§. 25. I allow it is usual for most People to wonder, how any one should find a Difficulty in what they think they every Day observe.

observe. Do we not see, will they be ready to say, the Parts of Bodies stick firmly together? Is there any thing more common? And what doubt can there be made of it? And the like, I say, concerning *Thinking* and *voluntary Motion*: Do we not every Moment experiment it in ourselves, and, therefore, can it be doubted! The Matter of Fact is clear, I confess; but when we would a little nearer look into it, and consider how it is done, there, I think, we are at a Loss, both in the one, and the other; and can as little understand how the Parts of Body cohere, as how we ourselves perceive, or move. I would have any one intelligibly explain to me, how the Parts of Gold, or Brass, (that but now in Fusion were as loose from one another, as the Particles of Water, or the Sands of an Hour-glass,) come in a few Moments to be so united; and adhere so strongly one to another, that the utmost Force of Mens Arms cannot separate them: A considering Man will, I suppose, be here at a Loss, to satisfy his own, or another Man's Understanding.

§. 26. THE little Bodies, that compose that Fluid, we call *Water*, are so extremely small, that I never heard of any one, who, by a Microscope, (and yet I have heard of some, that have magnified to 10,000, nay, to much above 100,000 times) pretended to perceive their distinct Bulk, Figure, or Motion; and the Particles of *Water* are also so perfectly loose one from another, that the least Force sensibly separates them. Nay, if we consider their perpetual Motion, we must allow them to have no Cohesion one with another; and yet let but a sharp Cold come, and they unite, they consolidate, these little Atoms cohere, and are not, without great Force, separable. He that could find the Bonds that tie these Heaps of loose little Bodies together so firmly; he that could make known the Cement that makes them stick so fast one to another, would discover a great, and yet unknown Secret: And yet, when that was done, would he be far enough from making the Extension of Body (which is the Cohesion of its solid Parts) intelligible, till he could shew wherein consisted the Union, or Consolidation of the Parts of those Bonds, or of that Cement, or of the least Particle of Matter that exists. Whereby it appears, that this primary, and supposed obvious

Quality of Body, will be found, when examined, to be as incomprehensible, as any Thing belonging to our Minds, and *a solid, extended Substance, as hard to be conceived, as a thinking, immaterial one*, whatever Difficulties some would raise against it.

§. 27. For, to extend our Thoughts a little farther, that Pressure, which is brought to explain the Cohesion of Bodies, is as unintelligible as the Cohesion itself. For, if Matter be considered, as no doubt it is, finite, let any one send his Contemplation to the Extremities of the Universe, and there see what conceivable Hoops, what Bond he can imagine to hold this Mass of Matter in so close a Pressure together; from whence Steel has its Firmness, and the Parts of a Diamond their Hardness and Indissolubility. If Matter be finite, it must have its Extremes; and there must be something to hinder it from scattering asunder. If, to avoid this Difficulty, any one will throw himself into the Supposition and Abyfs of infinite Matter, let him consider what Light he thereby brings to the *Cohesion of Body*; and whether he be ever the nearer making it intelligible, by resolving it into a Supposition, the most absurd, and most incomprehensible of all other: So far is our Extension of Body (which is nothing but the Cohesion of solid Parts) from being clearer, or more distinct, when we would enquire into the Nature, Cause, Manner of it, than the *Idea of Thinking*.

Communication of Motion by Impulse, or by Thought, equally intelligible.

§. 28. ANOTHER *Idea* we have of Body, is the Power of *Communication of Motion by Impulse*; and of our Souls, the Power of exciting *Motion by Thought*. These *Ideas*, the one of

Body, the other of our Minds, every Day's Experience clearly furnishes us with: But, if here again we enquire how this is done, we are *equally in the Dark*. For in the Communication of Motion by Impulse, wherein as much Motion is lost to one Body, as is got to the other, which is the ordinary Case, we can have no other Conception, but of the passing of Motion out of one Body into another; which, I think, is as obscure and unconceivable, as how our Minds move, or stop our Bodies by Thought; which we every Moment find they do. The Increase of Motion by Impulse, which is observed, or believed

lieved sometimes to happen, is yet harder to be understood. We have, by daily Experience, clear Evidence of Motion, produced both by Impulse and by Thought ; but the Manner how, hardly comes within our Comprehension ; we are equally at a loss in both. So that however we consider Motion, and its Communication, either from Body, or Spirit, *the Idea which belongs to Spirit, is at least as clear, as that which belongs to Body.* And if we consider the active Power of Moving, or, as I may call it, *Motivity*, it is much clearer in Spirit than Body ; since two Bodies, placed by one another at rest, will never afford us the *Idea* of a Power in the one to move the other, but by a borrowed Motion : Whereas the Mind, every Day, affords us *Ideas* of an active Power of moving of Bodies ; and, therefore, it is worth our Consideration, whether active Power be not the proper Attribute of Spirits, and passive Power of Matter. Hence may be conjectured, that created Spirits are not totally separate from Matter, because they are both active and passive. Pure Spirit, *viz.* God, is only active ; pure Matter is only passive ; those Beings that are both active and passive, we may judge to partake of both. But, be that as it will, I think, we have as many, and as clear *Ideas* belonging to Spirit, as we have belonging to Body, the Substance of each being equally unknown to us ; and the *Idea* of Thinking in Spirit, as clear as of Extension in Body ; and the Communication of Motion by Thought, which we attribute to Spirit, is as evident as that by Impulse, which we ascribe to Body. Constant Experience makes us sensible of both of these, tho' our narrow Understandings can comprehend neither. For, when the Mind would look beyond those original *Ideas* we have from Sensation, or Reflexion, and penetrate into their Causes, and Manner of Production, we find still it discovers nothing, but its own Short-sightedness.

§. 29. To conclude, Sensation convinces us, that there are solid, extended Substances ; and Reflexion, that there are thinking ones : Experience assures us of the Existence of such Beings ; and that the one hath a Power to move Body by Impulse, the other by Thought ; this we cannot doubt of. Experience, I say, every Moment furnishes us with the clear *Ideas*, both of the one and

and the other. But beyond these *Ideas*, as received from their proper Sources, our Faculties will not reach. If we would enquire farther into their Nature, Causes, and Manner, we perceive not the Nature of Extension, clearer than we do of Thinking. If we would explain them any farther, one is as easy as the other; and there is no more Difficulty to conceive, how a Substance we know not, should, by Thought, set Body into Motion, than how a Substance we know not, should, by Impulse, set Body into Motion. So that we are no more able to discover, wherein the *Ideas* belonging to Body consist, than those belonging to Spirit. From whence it seems probable to me, that the simple *Ideas* we receive from Sensation, and Reflexion, are the Boundaries of our Thoughts; beyond which, the Mind, whatever Efforts it would make, is not able to advance one Jot; nor can it make any Discoveries, when it would pry into the Nature and hidden Causes of those *Ideas*.

Idea of Body and Spirit compared. §. 30. So that, in short, the *Idea* we have of *Spirit, compared with the Idea we have of Body,* stands thus: The Substance of Spirit is unknown to us; and so is the Substance of Body equally unknown to us. Two primary Qualities, or Properties of Body, *viz.* solid, coherent Parts and Impulse, we have distinct, clear *Ideas* of: So, likewise, we know, and have distinct, clear *Ideas* of two primary Qualities, or Properties, of Spirit, *viz.* Thinking, and a Power of Action; *i.e.* a Power of beginning, or stopping several Thoughts, or Motions. We have also the *Ideas* of several Qualities inherent in Bodies, and have the clear, distinct *Ideas* of them: Which Qualities are but the various Modifications of the Extension of cohering, solid Parts, and their Motion. We have, likewise, the *Ideas* of the several Modes of Thinking, *viz.* Believing, Doubting, Intending, Fearing, Hoping; all which are but the several Modes of Thinking. We have also the *Ideas* of Willing, and moving the Body consequent to it, and with the Body itself too; for, as has been shewn, Spirit is capable of Motion.

The Notion of Spirit involves no more Difficulty in it, than that of Body. §. 31. LASTLY, If this Notion of immaterial Spirit may have, perhaps, some Difficulties in it, not easy to be explained, we have, therefore, no more

more Reason to deny, or doubt, the Existence of such Spirits, than we have to deny, or doubt, the Existence of Body; because the Notion of Body is cumbered with some Difficulties, very hard, and, perhaps, impossible to be explained, or understood by us. For I would fain have instanced any Thing in our Notion of Spirit, more perplexed, or nearer a Contradiction, than the very Notion of Body includes in it; the Divisibility *in infinitum* of any finite Extension, involving us, whether we grant, or deny it, in Consequences impossible to be explicated, or made in our Apprehensions consistent; Consequences, that carry greater Difficulty, and more apparent Absurdity, than any Thing can follow from the Notion of an immaterial, knowing Substance.

§. 32. WHICH we are not at all to wonder at, since we, having but some few, superficial Ideas of Things, discovered to us only by the Senses, from without, or by the Mind, reflecting on what it experiments in itself within, have no Knowledge beyond that, much less of the internal Constitution, and true Nature of Things, being destitute of Faculties to attain it. And, therefore, experimenting and discovering in ourselves Knowledge, and the Power of voluntary Motion, as certainly as we experiment, or discover in Things without us, the Cohesion and Separation of solid Parts, which is the Extension and Motion of Bodies; *we have as much Reason to be satisfied with our Notion of immaterial Spirit, as with our Notion of Body, and the Existence of the one as well as the other.* For it being no more a Contradiction, that Thinking should exist, separate and independent from Solidity, than it is a Contradiction, that Solidity should exist, separate and independent from Thinking, they being both but simple Ideas, independent one from another; and having as clear and distinct Ideas in us of Thinking, as of Solidity, I know not why we may not as well allow a thinking Thing without Solidity, *i. e. immaterial*, to exist, as a solid Thing without Thinking, *i. e. Matter* to exist; especially since it is no harder to conceive how Thinking should exist without Matter, than how Matter should think. For, whensoever we would proceed beyond these

We know nothing beyond our simple Ideas.

simple *Ideas* we have from Sensation and Reflexion, and dive farther into the Nature of Things, we fall presently into Darkness and Obscurity, Perplexedness and Difficulties; and can discover nothing farther, but our own Blindness and Ignorance. But which ever of these complex *Ideas* be clearest, that of Body, or immaterial Spirit, this is evident, that the simple *Ideas* that make them up, are no other than what we have received from Sensation, or Reflexion; and so it is of all our other *Ideas* of Substances, even of God Himself.

§. 33. For, if we examine the *Ideas* we have Idea of God. of the incomprehensible, supreme Being, we shall find, that we come by it the same Way; and that the complex *Ideas* we have, both of God, and separate Spirits, are made up of the simple *Ideas* we receive from *Reflexion*; v. g. having from what we experiment in ourselves, got the *Ideas* of Existence and Duration; of Knowledge and Power; of Pleasure and Happiness; and of several other Qualities and Powers, which it is better to have, than to be without: When we would frame an *Idea*, the most suitable we can, to the supreme Being, we enlarge every one of these with our *Idea* of Infinity, and so, putting them together, make our complex *Idea of God*. For that the Mind has such a Power of enlarging some of its *Ideas*, received from Sensation and Reflexion, has been already shewn.

§. 34. If I find that I know some few Things, and some of them, or all, perhaps, imperfectly, I can frame an *Idea* of knowing twice as many; which I can double again, as often as I can add to Number; and thus enlarge my *Idea* of Knowledge, by extending its Comprehension to all Things existing, or possible: The same also I can do of knowing them more perfectly, i. e. all their Qualities, Powers, Causes, Consequences, and Relations, &c. till all be perfectly known, that is in them, or can any Way relate to them; and thus frame the *Idea* of infinite, or boundless Knowledge. The same may also be done of Power, till we come to that we call Infinite; and also of the Duration of Existence, without Beginning, or End; and so frame the *Idea* of an eternal Being. The Degrees, or Extent, wherein we ascribe Existence, Power, Wisdom, and all other Perfections,

tions, (which we can have any *Ideas* of) to that sovereign Being, which we call GOD, being all boundless and infinite, we frame the best *Idea* of Him our Minds are capable of: All which is done, I say, by enlarging those simple *Ideas* we have taken from the Operations of our own Minds, by Reflexion; or by our Senses, from exterior Things, to that Vastness, to which Infinity can extend them.

§. 35. For it is Infinity, which, joined to our *Ideas* of Existence, Power, Knowledge, &c. makes that complex *Idea*, whereby we represent to ourselves, the best we can, the supreme Being. For tho' in His own Essence, (which certainly we do not know, not knowing the real Essence of a Pebble, or a Fly, or of our own selves) God be simple and uncompounded; yet, I think, I may say, we have no other *Idea* of Him, but a complex one of Existence, Knowledge, Power, Happiness, &c. infinite and eternal: Which are all distinct *Ideas*, and some of them being relative, are again compounded of others; all which being, as has been shewn, originally got from *Sensation* and *Reflexion*, go to make up the *Idea*, or Notion, we have of God.

§. 36. THIS farther is to be observed, that there is no *Idea* we attribute to God, bating Infinity, which is not also a Part of our complex *Idea* of other Spirits. Because, being capable of no other simple *Ideas*, belonging to any Thing but Body, but those which, by Reflexion, we receive from the Operation of our Minds, we can attribute to Spirits no other, but what we receive from thence: And all the Difference we can put between them, in our Contemplation of Spirits, is only in the several Extents, and Degrees, of their Knowledge, Power, Duration, Happiness, &c. For that in our *Ideas*, as well of Spirits, as of other Things, we are *restrained to those we receive from Sensation and Reflexion*, is evident from hence; that, in our *Ideas* of Spirits, how much soever advanced in Perfection beyond those of Bodies, even to that of Infinite, we cannot yet have any *Idea* of the Manner wherein they discover their Thoughts one to another: Tho' we must necessarily conclude, that separate Spirits, which

No Ideas in
our complex one
of Spirits, but
those got from
Sensation, or
Reflexion.

which are Beings that have perfecter Knowledge, and greater Happiness than we, must needs have also a perfecter Way of communicating their Thoughts than we have, who are fain to make use of corporeal Signs, and particular Sounds, which are, therefore, of most general Use, as being the best and quickest we are capable of. But of immediate Communication, having no Experiment in ourselves, and, consequently, no Notion of it at all, we have no *Idea*, how Spirits, which use not Words, can with Quickness, or much less, how Spirits, that have no Bodies, can be Masters of their own Thoughts, and communicate, or conceal them at pleasure, tho' we cannot but necessarily suppose they have such a Power.

Recapitulation. §. 37. AND thus we have seen, *what kind of Ideas we have of Substances of all kinds*, wherein they consist, and how we come by them. From whence, I think, it is very evident,

First, THAT all our *Ideas* of the several Sorts of Substances, are nothing but Collections of simple *Ideas*, with a Supposition of something to which they belong, and in which they subsist; tho' of this supposed something, we have no clear, distinct *Idea* at all.

Secondly, THAT all the simple *Ideas*, that, thus united in one common *Substratum*, make up our complex *Ideas* of several Sorts of Substances, are no other but such as we have received from *Sensation*, or *Reflexion*. So that even in those, which we think we are most intimately acquainted with, and that come nearest the Comprehension of our most enlarged Conceptions, we cannot go beyond those simple *Ideas*. And even in those, which seem the most remote from all we have to do with, and do infinitely surpass any thing we can perceive in ourselves, by *Reflexion*, or discover by *Sensation* in other Things, we can attain to nothing but those simple *Ideas*, which we originally received from *Sensation*, or *Reflexion*; as is evident in the complex *Ideas* we have of Angels, and particularly of God Himself.

Thirdly, THAT most of the simple *Ideas*, that make up our complex *Ideas* of Substances, when truly considered, are only Powers, however we are apt to take them for positive Qualities;

v.g. the

v. g. the greatest part of the *Ideas*, that make our complex *Idea* of *Gold*, are *Yellowness*, great *Weight*, *Ductility*, *Fusibility*, and *Solubility*, in *Aq. Regia*, &c. all united together in an unknown *Substratum*: All which *Ideas* are nothing else but so many Relations to other Substances, and are not really in the *Gold*, consider'd barely in itself, tho' they depend on those real and primary Qualities of its internal Constitution, whereby it has a *Fitness*, differently to operate, and be operated on by several other Substances.

C H A P. XXIV.

Of Collective Ideas of Substances.

§. 1. **B**E S I D E S these complex *Ideas* of one *Idea* ;
several, single Substances, as of Man,

Horse, Gold, Violet, Apple, &c. the Mind hath also complex, collective *Ideas* of Substances; which I so call, because such *Ideas* are made up of many particular Substances, consider'd together as united into one *Idea*, and which, so join'd, are look'd on as one; v. g. the *Idea* of such a Collection of Men as make an Army, tho' consisting of a great Number of distinct Substances, is as much one *Idea*, as the *Idea* of a Man: And the great collective *Idea* of all Bodies whatsoever, signified by the Name *World*, is as much one *Idea*, as the *Idea* of any the least Particle of Matter in it; it sufficing to the Unity of any *Idea*, that it be consider'd as one Representation, or Picture, tho' made up of ever so many Particulars.

§. 2. **T**HESSE collective *Ideas* of Substances, *Made by the Power of composition and uniting severally, either simple, or complex Ideas, into one*, as it does by the same Faculty make the complex *Ideas* of particular Substances, consisting of an Aggregate of divers, simple *Ideas*, united in one Substance. And as the Mind, by putting together the repeated *Ideas* of Unity, makes the collective Mode, or complex *Idea* of any Number, as a Score, or a Croft, &c. So, by putting together several particular

particular Substances; it makes collective *Ideas* of Substances; as a Troop, an Army, a Swarm, a City, a Fleet; each of which, every one finds that he represents to his own Mind, by one *Idea*, in one View; and so, under that Notion, considers those several Things as perfectly one, as one Ship, or one Atom. Nor is it harder to conceive, how an Army of ten thousand Men should make one *Idea*, than how a Man should make one *Idea*; it being as easy to the Mind, to unite into one the *Idea* of a great Number of Men, and consider it as one, as it is to unite into one Particular, all the distinct *Ideas* that make up the Composition of a Man, and consider them all together as one.

*All artificial
Things are
collective
Ideas.*

§. 3. AMONGST such Kind of collective *Ideas* are to be counted most Part of artificial Things; at least such of them as are made up of distinct Substances:

And, in Truth, if we consider all these collective *Ideas* aright; as *ARMY*, *Constellation*, *Universe*, as they are united into so many single *Ideas*, they are but the artificial Draughts of the Mind, bringing Things very remote, and independent on one another, into one View, the better to contemplate, and discourse of them, united into one Concepti-
on, and signified by one Name. For there are no Things so remote, nor so contrary, which the Mind cannot, by this Art of Composition, bring into one *Idea*; as is visible, in that signified by the Name *Universe*.

C H A P. XXV.

Of RELATION.

Relation, what.

BE SIDES the *Ideas*, whether simple, or complex, that the Mind has of Things, as they are in themselves, there are others it gets from their Comparison one with another. The Under-
standing, in the Consideration of any Thing, is not confined to that precise Object: It can carry any *Idea*, as it were, beyond it-
self, or, at least, look beyond it, to see how it stands in confor-
mity to any other. When the Mind so considers one Thing,
that

that it does, as it were, bring it to, and set it by another, and carry its View from one to the other ; this is, as the Words import, *Relation* and *Respect* ; and the Denominations given to positive Things, intimating that *Respect*, and serving as Marks to lead the Thoughts beyond the Subject itself denominated, to something distinct from it, are what we call *Relatives* ; and the Things so brought together, *Related*. Thus, when the Mind considers *Cajus*, as such a positive Being, it takes nothing in to that *Idea*, but what really exists in *Cajus*; *v. g.* when I consider him as Man, I have nothing in my Mind, but the complex *Ideas* of the Species, Man. So, likewise, when I say *Cajus* is a white Man, I have nothing but the bare Consideration of Man, who hath that white Colour. But when I give *Cajus* the Name, *Husband*, I intimate some other Person ; and when I give him the Name, *Whiter*, I intimate some other Thing. In both Cases my Thought is led to something beyond *Cajus*, and there are two Things brought into Consideration. And since any *Idea*, whether simple, or complex, may be the Occasion why the Mind thus brings two Things together, and, as it were, takes a View of them at once, tho' still considered as distinct ; therefore any of our *Ideas* may be the Foundation of Relation. As in the above-mentioned Instance, the Contract and Ceremony of Marriage with *Sempronius*, is the Occasion of the Denomination, or Relation of Husband ; and the Colour White, the Occasion why he is said whiter than Free-stone.

§. 2. THESE, and the like *Relations*, express'd by relative Terms, that have others answering them, with a reciprocal Intimation, as Father and Son, Bigger and Less, Cause and Effect, are very obvious to every one, and every body, at first Sight, perceives the Relation. For Father and Son, Husband and Wife, and such other correlative Terms, seem so nearly to belong one to another, and, through Custom, do so readily chime, and answer one another in People's Memories, that upon the naming of either of them, the Thoughts are presently carried beyond the Thing so named ; and no body overlooks, or doubts of, a Relation, where it is so plainly intimated. But, where

Relations with-
out correlative
Terms, not ea-
sily perceiv'd.
Language's

Languages have failed to give correlative Names, there the Relation is not always so easily taken notice of. *Concubine* is, no doubt, a relative Name, as well as *Wife*: But in Languages where this, and the like Words, have not a correlative Term; there People are not so apt to take them to be so, as wanting that evident Mark of Relation which is between Correlatives, which seem to explain one another, and not to be able to exist, but together. Hence it is, that many of those Names which, duly considered, do include evident Relations, have been called External Denominations. But all Names, that are more than empty Sounds, must signify some *Idea*, which is either in the Thing to which the Name is applied; and then it is positive, and is looked on as united to, and existing in the Thing to which the Denomination is given: Or else it arises from the Respect the Mind finds in it, to something distinct from it, with which it considers it; and then it includes a Relation.

*Some seemingly
absolute Terms
contain Relati-
ons.*

§. 3. ANOTHER Sort of *relative Terms* there is, which are not looked on to be either relative, or so much as external Denominations;

*which yet, under the Form and Appearance of
signifying something absolute in the Subject, do conceal a tacit,
tho' less observable Relation. Such are the seemingly positive
Terms of *Old*, *Great*, *Imperfect*, &c. whereof I shall have occa-
sion to speak more at large, in the following Chapters.*

*Relation differ-
ent from the
Things related.*

§. 4. THIS farther may be observed, that the Ideas of Relation may be the same in Men, who have far different Ideas of the Things that are related, or that are thus compared; *v. g.* those who have far different Ideas of a *Man*, may yet agree in the Notion of a *Father*: Which is a Notion superinduced to the Substance, or *Man*, and refers only to an Act of that Thing called *Man*, whereby he contributed to the Generation of one of his own Kind, let *Man* be what it will.

*Change of Rela-
tion may be,
without any
Change in the
Subject.*

§. 5. THE Nature therefore of Relation consists in the referring, or comparing two Things, one to another; from which Comparison, one, or both, comes to be denominated. And if ei- ther

ther of those Things be removed, or cease to be, the Relation ceases, and the Denomination consequent to it, tho' the other receive in itself no Alteration at all : *V. g. Cagus*, whom I consider To-day as a Father, ceases to be so To-morrow, only by the Death of his Son, without any Alteration made in himself. Nay, barely by the Mind's changing the Object, to which it compares any Thing, the same Thing is capable of having contrary Denominations, at the same Time : *V. g. Cagus*, compared to several Persons, may truly be said to be older and younger, stronger and weaker, &c.

§. 6. WHATSOEVER doth, or can exist, or be consider'd as one Thing, is positive : And so not only simple Ideas and Substances, but Modes also, are positive Beings ; tho' the Parts, of which they consist, are very often relative one to another ; but the whole together, consider'd as one Thing, and producing in us the complex Idea of one Thing ; which Idea is in our Minds, as one Picture, tho' an Aggregate of divers Parts ; and, under one Name, it is a positive, or absolute Thing, or Idea. Thus a Triangle, tho' the Parts thereof compared to one another be *relative*, yet the Idea of the whole is a positive, absolute Idea. The same may be said of a Family, a Tune, &c. for there can be no Relation, but between two Things, consider'd as two Things. There must always be in Relation two Ideas, or Things, either in themselves really separate, or consider'd as distinct, and then a ground, or occasion for their Comparison.

§. 7. CONCERNING Relation in general, these Things may be consider'd.

First, THAT there is *no one Thing*, whether simple Idea, Substance, Mode, or Relation, or Name of either of them, *which is not capable of almost an infinite Number of Considerations*, in reference to other Things ; and, therefore, this makes no small Part of Mens Thoughts and Words : *V. g.* One single Man may at once be concern'd in, and sustain all these following Relations, and many more, *viz.* Father, Brother, Son, Grandfather, Grandson, Father-in-law, Son-in-law, Husband, Friend, Enemy, Subject, General, Judge, Patron, Client,

*Relation only
between two
Things.*

*All Things ca-
pable of Relati-
on.*

Professor, *European*, *Englishman*, *Islander*, *Servant*, *Master*, *Professor*, *Captain*, *Superior*, *Inferior*, *Bigger*, *Lefs*, *Older*, *Younger*, *Contemporary*, *Like*, *Unlike*, &c. to an almost infinite Number: He being capable of as many Relations, as there can be Occasions of comparing them to other Things, in any Manner of Agreement, Disagreement, or Respect whatsoever. For, as I said, *Relation* is a way of comparing, or considering two Things together, and giving one, or both of them, some Appellation from that Comparison; and sometimes giving even the Relation itself a Name.

The Ideas of Relations, clearer often than of the Subjects related.

§. 8. Secondly, THIS farther may be consider'd concerning *Relation*, that tho' it be not contain'd in the real Existence of Things, but something extraneous and super-induc'd; yet the

Ideas, which relative Words stand for, are often clearer and more distinct, than of those Substances to which they do belong. The Notion we have of a Father, or Brother, is a great deal clearer, and more distinct, than that we have of a Man; or, if you will, *Paternity* is a Thing, whereof it is easier to have a clear *Idea*, than of *Humanity*: And I can much easier conceive what a Friend is, than what God: Because the Knowledge of one Action, or one simple *Idea*, is oftentimes sufficient to give me the Notion of a Relation: But, to the knowing of any substantial Being, an accurate Collection of sundry *Ideas* is necessary. A Man, if he compares two Things together, can hardly be supposed not to know what it is, wherin he compares them: So that when he compares any Things together, he cannot but have a very clear *Idea* of that Relation. The *Ideas* then of *Relations are capable, at least, of being more perfect and distinct in our Minds, than those of Substances*: Because it is commonly hard to know all the simple *Ideas* which are really in any Substance, but for the most part easy enough to know the simple *Ideas* that make up any Relation I think on, or have a Name for: V. g. Comparing two Men, in reference to one common Parent, it is very easy to frame the *Ideas* of Brothers, without having yet the perfect *Idea* of a Man: For significant, relative Words, as well as others, standing only for *Ideas*; and those being all either simple, or made

made up of simple ones, it suffices for the knowing the precise *Idea* the relative Term stands for, to have a clear Conception of that, which is the Foundation of the Relation; which may be done, without having a perfect and clear *Idea* of the Thing it is attributed to: Thus having the Notion, that one laid the Egg, out of which the other was hatch'd, I have a clear *Idea* of the Relation of *Dam and Chick*, between the two Cassowaries in *St. James's Park*; tho', perhaps, I have but a very obscure and imperfect *Idea* of those Birds themselves.

§. 9. Thirdly, Tho' there be a great Number of Considerations, wherein Things may be compared one with another, and so a Multitude of *Relations*; yet they all terminate in, and are concern'd about those *simple Ideas*, either of Sensation, or Reflexion; which I think to be the whole Materials of all our Knowledge. To clear this, I shall shew it, in the most considerable Relations that we have any Notion of, and in some that seem to be the most remote from *Sense*, or *Reflexion*; which yet will appear to have their *Ideas* from thence, and leave it past doubt, that the Notions we have of them are but certain simple *Ideas*, and so originally deriv'd from Sense, or Reflexion.

§. 10. Fourthly, THAT Relation being the considering of one Thing with another, which is extrinsical to it, it is evident, that all Words, that necessarily lead the Mind to any other *Ideas*, than are supposed really to exist in that Thing, to which the Word is apply'd, are *relative Words*: V. g. A *Man black, merry, thoughtful, thirsty, angry, extended*; these, and the like, are all absolute, because they neither signify, nor intimate any Thing, but what does, or is supposed really to exist in the Man thus denominat-ed: But *Father, Brother, King, Husband, Blacker, Merrier, &c.* are Words which, together with the Thing they denominate, imply also something else separate, and exterior to the Existence of that Thing.

§. 11. HAVING laid down these Premises concerning *Relation* in general, I shall now proceed to shew, in some Instances, how all the *Ideas* we have of *Rela-tion*:

*Relations all
terminate in
simple Ideas.*

*Terms, leading
the Mind beyond
the Subject de-
nominated, are
relative.*

Conclusion.

tion are made up, as the others are, only of simple *Ideas*; and that they all, how refined, or remote from Sense soever they seem, terminate at last in simple *Ideas*. I shall begin with the most comprehensive Relation, wherein all Things that do, or can exist, are concerned; and that is, the Relation of *Cause* and *Effect*; the *Idea* whereof, how deriv'd from the two Fountains of all our Knowledge, *Sensation* and *Reflexion*, I shall in the next Place consider.

C H A P. XXVI.

Of Cause and Effect, and other Relations.

Whence their Ideas got.

§. 1. IN the Notice, that our Senses take, of

I the constant Vicissitude of Things, we cannot but observe,

that several particular, both Qualities and Substances, begin to exist; and that they receive this their Existence from the due Application and Operation of some other Being. From this Observation, we get our *Ideas* of *Cause* and *Effect*: That, which produces any simple, or complex *Idea*, we denote by the general Name *Cause*; and that which is produc'd, *Effect*. Thus finding, that in that Substance, which we call Wax, Fluidity, which is a simple *Idea*, that was not in it before, is constantly produced by the Application of a certain degree of Heat; we call the simple *Idea* of Heat, in relation to Fluidity in Wax, the *Cause* of it, and Fluidity the *Effect*. So also finding, that the Substance, Wood, which is a certain Collection of simple *Ideas*, so called, by the Application of Fire, is turned into another Substance, called Ashes; i. e. another complex *Idea*, consisting of a Collection of simple *Ideas*, quite different from that complex *Idea*, which we call Wood; we consider Fire, in relation to Ashes, as *Cause*, and the Ashes as *Effect*. So that whatever is consider'd by us, to conduce, or operate to the producing any particular, simple *Idea*, or Collection of simple *Ideas*, whether Substance, or Mode, which did not

not before exist, hath thereby, in our Minds, the relation of a Cause, and so is denominated by us.

§. 2. HAVING thus, from what our Senses are able to discover in the Operations of Bodies on one another, got the Notion of *Cause* and *Effect*, viz. that a *Cause* is that which makes any other Thing, either simple *Idea*, Substance, or Mode, begin to be; and an *Effect* is that, which had its Beginning from some other Thing: The Mind finds no great Difficulty to distinguish the several Originals of Things into two sorts.

Creation, Generation, making Alteration.

First, WHEN the Thing is wholly made new, so that no Part thereof did ever exist before; as when a new Particle of Matter doth begin to exist, *in rerum natura*, which had before no Being, and this we call *Creation*.

Secondly, WHEN a Thing is made up of Particles, which did all of them before exist, but that very Thing, so constituted of pre-existing Particles, which, consider'd all together, make up such a Collection of simple *Ideas*, had not any *Existence* before; as this Man, this Egg, Rose, or Cherry, &c. and this, when referred to a Substance, produced in the ordinary Course of Nature, by an internal Principle, but set on work by, and received from some external Agent, or Cause, and working by insensible ways, which we perceive not, we call *Generation*. When the Cause is extrinsical, and the Effect produced by a sensible Separation, or *juxta* Position of discernable Parts, we call it *Making*; and such are all artificial Things. When any simple *Idea* is produced, which was not in that Subject before, we call it *Alteration*. Thus a Man is generated, a Picture made, and either of them alter'd, when any new sensible Quality, or simple *Idea* is produced in either of them, which was not there before; and the Things thus made to exist, which were not there before, are *Effects*; and those Things, which operated to the Existence, *Causes*. In which, and all other Cases, we may observe, that the Notion of *Cause* and *Effect*, has its Rise from *Ideas*, received by Sensation, or Reflexion; and that this Relation, how comprehensive soever, terminates at last in them. For to have the *Idea* of *Cause* and *Effect*, it suffices to consider any simple *Idea*,

or

or Substance as beginning to exist by the Operation of some other, without knowing the manner of that Operation.

Relations of Time. §. 3. TIME and Place are also the Foundations of very large Relations, and all finite Beings, at least, are concerned in them. But having already shewn, in another Place, how we get these *Ideas*, it may suffice here to intimate, that most of the Denominations of Things, received from Time, are only Relations. Thus, when any one says, that Queen *Elizabeth* lived Sixty-nine, and reign'd Forty-five Years; these Words import only the Relation of that Duration to some other, and mean no more but this, that the Duration of her Existence was equal to Sixty-nine, and the Duration of her Government to Forty-five annual Revolutions of the Sun; and so are all Words answering, *How long?* Again, *William* the Conqueror invaded *England* about the Year 1070; which means this, that taking the Duration from our Saviour's Time till now, for one entire, great Length of Time, it shews at what Distance this Invasion was from the two Extremes: And so do all Words of Time, answering to the Question, *When?* which shews only the Distance of any Point of Time, from the Period of a longer Duration, from which we measure, and to which we thereby consider it, as related.

§. 4. THERE are yet, besides those, other Words of Time, that ordinarily are thought to stand for positive *Ideas*, which yet will, when considered, be found to be relative; such as are *Young*, *Old*, &c. which include and intimate the relation any Thing has to a certain Length of Duration, whereof we have the *Idea* in our Minds. Thus, having settled in our Thoughts, the *Idea* of the ordinary Duration of a Man to be Seventy Years; when we say a Man is *young*, we mean, that his Age is yet but a small Part of that, which usually Men attain to: And, when we denominate him *old*, we mean, that his Duration is run out almost to the End of that which Men do not usually exceed. And so it is but comparing the particular Age, or Duration of this, or that Man, to the *Idea* of that Duration, which we have in our Minds, as ordinarily belonging to that Sort of Animals: Which is plain, in the Application of these Names to other Things; for a Man

a Man is called young at Twenty Years, and very young at Seven Years old: But yet a Horse we call old at Twenty, and a Dog at Seven Years; because in each of these, we compare their Age to different *Ideas* of Duration, which are settled in our Minds, as belonging to these several Sorts of Animals, in the ordinary Course of Nature. But the Sun and Stars, tho' they have outlasted several Generations of Men, we call not old, because we do not know what Period God hath set to that sort of Beings. This Term belonging properly to those Things, which we can observe, in the ordinary Course of Things, by a natural Decay, to come to an End in a certain Period of Time; and so have in our Minds, as it were, a Standard, to which we can compare the several Parts of their Duration; and, by the relation they bear thereunto, call them young or old; which we cannot therefore do to a Ruby, or a Diamond, Things whose usual Periods we know not.

§. 5. THE Relation also that Things have to one another, in their Places and Distances, is very obvious to observe; as Above, Below, a Mile distant from Charing-Cross, in England, and in London. But as in Duration, so in Extension and Bulk, there are some *Ideas* that are relative, which we signify by Names that are thought positive; as Great and Little are truly Relations. For here also having, by Observation, settled in our Minds the Ideas of the Bigness of several Species of Things, from those we have been most accustomed to, we make them as it were the Standards, whereby to denominate the Bulk of others. Thus we call a great Apple, such a one as is bigger than the ordinary sort of those we have been used to; and a little Horse, such a one as comes not up to the Size of that *Idea*, which we have in our Minds to belong ordinarily to Horses: And that will be a great Horse to a Welchman, which is but a little one to a Fleming; they two having, from the different Breed of their Countries, taken several siz'd *Ideas*, to which they compare, and in relation to which they denominate their Great and their Little.

*Relations of
Place and Ex-
tension.*

Absolute Terms often stand for Relations.

§. 6. So, likewise, *Weak* and *Strong* are but relative Denominations of Power, compared to some Ideas we have, at that time, of greater, or less Power. Thus when we say a weak Man, we mean one that has not so much Strength, or Power to move, as usually Men have, or usually those of his Size have; which is a comparing his Strength to the Idea we have of the usual Strength of Men, or Men of such a Size. The like, when we say the Creatures are all weak Things; weak, there, is but a relative Term, signifying the Disproportion there is in the Power of God and the Creatures. And so Abundance of Words, in ordinary Speech, stand only for Relations (and, perhaps, the greatest Part) which, at first Sight, seem to have no such Signification: *V. g.* The Ship has necessary Stores: *Necessary* and *Stores* are both relative Words; one having a relation to the accomplishing the Voyage intended, and the other to future Use. All which Relations, how they are confined to, and terminate in Ideas derived from *Sensation*, or *Reflexion*, is too obvious to need any Explication.

C H A P. XXVII.

Of Identity and Diversity.

Wherein Identity consists.

§. I.

ANOTHER Occasion the Mind oftentimes takes of comparing, is, the very Being of Things, when considering any Thing as existing at any determin'd Time and Place, we compare it with itself existing at another Time, and thereon form the Ideas of *Identity* and *Diversity*. When we see any Thing to be in any Place, in any instant of Time, we are sure (be it what it will) that it is that very Thing, and not another, which at that same Time exists in another Place, how like and undistinguishable soever it may be in all other respects; and in this consists *Identity*, when the Ideas, it is attributed to, vary not at all from what they were that Moment, wherein we consider their former Existence, and to which we compare the present; for we

never

never finding, nor conceiving it possible, that two Things, of the same Kind, should exist in the same Place at the same Time, we rightly conclude, that whatever exists any where, at any Time, excludes all of the same Kind, and is there itself alone. When, therefore, we demand, Whether any Thing be the same, or no? It refers always to something that existed such a Time, in such a Place, which it was certain at that Instant was the same with itself, and no other: From whence it follows, that one Thing cannot have two Beginnings of Existence, nor two Things one Beginning; it being impossible for two Things of the same Kind to be, or exist, in the same Instant, in the very same Place, or one and the same Thing in different Places: That, therefore, that had one Beginning, is the same Thing; and that, which had a different Beginning in Time and Place from that, is not the same, but divers. That which has made the Difficulty about this Relation, has been the little Care and Attention used, in having precise Notions of the Things, to which it is attributed.

§. 2. We have the *Ideas* but of three sorts of *Identity of Substances.* 1. God. 2. Finite Intelligences. 3. Bodies.

1. *God.* God is without beginning, eternal, unalterable, and every where; and, therefore, concerning his Identity, there can be no doubt. 2. *Finite Intelligences.* Finite Spirits having had each its determinate Time and Place of beginning to exist, the relation to that Time and Place will always determine to each of them its Identity, as long as it exists. 3. *Bodies.* The same will hold of every Particle of Matter, to which no Addition, or Subtraction of Matter being made, it is the same; for tho' these three sorts of Substances, as we term them, do not exclude one another out of the same Place; yet we cannot conceive but that they must necessarily each of them exclude any of the same Kind out of the same Place; or else the Notions and Names of Identity and Diversity would be in vain, and there could be no such Distinction of Substances, or any thing else one from another. For Example; could two Bodies be in the same Place, at the same time, then those two Parcels of Matter must be one and the same, take them great, or little; nay, all Bodies must be one

Identity of Modes.

and the same: For, by the same reason that two Particles of Matter may be in one Place, all Bodies may be in one Place; which, when it can be supposed, takes away the Distinction of Identity, and Diversity, of one and more, and renders it ridiculous. But it being a Contradiction, that two, or more, should be one, Identity and Diversity are Relations and Ways of comparing well founded, and of Use to the Understanding. All other Things being but Modes, or Relations, ultimately terminated in Substances, the Identity and Diversity of each particular Existence of them too will be, by the same Way, determined: Only as to Things, whose Existence is in Succession; such as are the Actions of finite Beings, *v.g. Motion and Thought*, both which consist in a continued Train of Succession, concerning their Diversity, there can be no Question; because each perishing the Moment it begins, they cannot exist in different Times, or in different Places, as permanent Beings can at different Times exist in distant Places; and, therefore, no Motion, or Thought, considered as at different Times, can be the same, each Part thereof having a different Beginning of Existence!

Principium Individuationis.

§. 3. FROM what has been said, it is easy to discover what is so much enquired after, the *Principium Individuationis*; and that, it is plain, is Existence itself, which determines a Being of any sort to a particular Time and Place, incommunicable to two Beings of the same Kind. This, tho' it seems easier to conceive in simple Substances, or Modes, yet, when reflected on, is not more difficult in compounded ones, if Care be taken to what it is applied: *V.g.* Let us suppose an Atom, *i.e.* a continued Body, under one immutable Superficies, existing in a determined Time and Place; it is evident that, consider'd in any Instant of its Existence, it is in that Instant the same with itself. For being at that Instant what it is, and nothing else, it is the same, and so must continue as long as its Existence is continued; for so long it will be the same, and no other. In like manner, if two, or more Atoms be joined together, into the same Mass, every one of those Atoms will be the same, by the foregoing Rule; and whilst

whilst they exist united together, the Mass, consisting of the same Atoms, must be the same Mass, or the same Body, let the Parts be ever so differently jumbled. But, if one of these Atoms be taken away, or one new one added, it is no longer the same Mass, or the same Body. In the State of living Creatures, their Identity depends not on a Mass of the same Particles, but on something else. For in them the Variation of great Parcels of Matter alters not the Identity. An Oak, growing from a Plant to a great Tree, and then lopp'd, is still the same Oak; and a Colt grown up to a Horse, sometimes fat, and sometimes lean, is all the while the same Horse; tho', in both these Cases, there may be a manifest Change of the Parts; so that truly they are not either of them the same Masses of Matter, tho' they be truly one of them the same Oak, and the other the same Horse; the Reason whereof is, that in these two Cases, of a Mass of Matter, and a living Body, *Identity* is not applied to the same Thing.

§. 4. WE must, therefore, consider wherein *Identity of Vegetables.*
an Oak differs from a Mass of Matter, and that seems to me to be in this; that the one is only the Cohesion of Particles of Matter, any how united, the other, such a Disposition of them as constitutes the Parts of an Oak, and such an Organization of those Parts, as is fit to receive and distribute Nourishment, so as to continue and frame the Wood, Bark, and Leaves, &c. of an Oak, in which consists the vegetable Life. That being then one Plant, which has such an Organization of Parts in one coherent Body, partaking of one common Life, it continues to be the same Plant, as long as it partakes of the same Life, tho' that Life be communicated to new Particles of Matter, vitally united to the living Plant, in a like continued Organization, conformable to that sort of Plants. For this Organization, being at any one Instant in any one Collection of *Matter*, is in that particular Concrete distinguish'd from all other, and is that individual Life, which existing constantly from that Moment, both forwards and backwards, in the same Continuity of insensibly succeeding Parts, united to the living Body of the Plant, it has that Identity, which makes the same Plant, and all the Parts of it, Parts of the same Plant, during all the Time that

that they exist united in that continued Organization, which is fit to convey that common Life to all the Parts so united.

Identity of Animals. §. 5. THE Case is not so much different in *Brutes*, but that any one may hence see what makes an Animal, and continues it the same.

Something we have like this in Machines, and may serve to illustrate it. For Example, What is a Watch? 'Tis plain, 'tis nothing but a fit Organization, or Construction of Parts, to a certain End, which, when a sufficient Force is added to it, it is capable to attain. If we would suppose this Machine one continued Body, all whose organized Parts were repair'd, increas'd, or diminish'd, by a constant Addition, or Separation of insensible Parts, with one common Life, we should have something very much like the Body of an Animal, with this Difference, That in an Animal, the Fitness of the Organization, and the Motion wherein Life consists, begin together, the Motion coming from within; but in Machines, the Force coming sensibly from without, is often away, when the Organ is in Order, and well fitted to receive it.

Identity of Man. §. 6. THIS also shews, wherein the Identity of the same *Man* consists, viz, in nothing but a

Participation of the same continued Life, by constantly, fleeting Particles of Matter, in succession vitally united to the same organized Body. He that shall Place the *Identity* of *Man* in any Thing else, but, like that of other Animals, in one fitly organized Body, taken in any one Instant, and from thence continued under one Organization of Life in several successively, fleeting Particles of Matter united to it, will find it hard to make an *Embryo*, one of Years, mad and sober, the same *Man*, by any Supposition, that will not make it possible for *Seth, Ishmael, Socrates, Pilate, St. Austin, and Cesar Borgia,* to be the same *Man*. For, if the *Identity* of Soul alone makes the same *Man*, and there be nothing in the Nature of Matter, why the same individual Spirit may not be united to different Bodies, it will be possible, that those Men living in distant Ages, and of different Tempers, may have been the same *Man*: Which Way of speaking must be, from a very strange Use of the Word *Man*,

applied

applied to an *Idea*, out of which Body and Shape is excluded: And that Way of speaking would agree yet worse with the Notions of those Philosophers, who allow of Transmigration, and are of Opinion that the Souls of Men may, for their Miscarriages, be detrued into the Bodies of Beasts, as fit Habitations, with Organs suited to the Satisfaction of their brutal Inclinations. But yet, I think, no body, could he be sure that the Soul of *Heliogabalus* were in one of his Hogs, would yet say that Hog were a *Man*, or *Heliogabalus*.

§. 7. 'Tis not, therefore, Unity of Substance, *Identity suited to the Idea.* that comprehends all Sorts of *Identity*, or will determine it in every Case; but to conceive and judge of it aright, we must consider what *Idea* the Word it is applied to, stands for; it being one Thing to be the same *Substance*, another the same *Man*, and a third the same *Person*, if *Person*, *Man*, and *Substance*, are three Names, standing for three different *Ideas*; for such as is the *Idea* belonging to that Name, such must be the *Identity*: Which, if it had been a little more carefully attended to, would, possibly have prevented a great deal of that Confusion, which often occurs about this Matter, with no small seeming Difficulties, especially concerning *Personal Identity*, which, therefore, we shall in the next Place a little consider.

§. 8. An Animal is a living, organized Body; *Same Man.* and, consequently, the same Animal, as we have observed, is the same continued Life, communicated to different Particles of Matter, as they happen, successively, to be united to that organiz'd, living Body. And, whatever is talked of other Definitions, ingenious Observation puts it past doubt, that the *Idea* in our Minds, of which the Sound, *Man*, in our Mouths is the Sign, is nothing else but of an Animal of such a certain Form: Since, I think, I may be confident, that whoever should see a Creature of his own Shape and Make, tho' it had no more Reason all its Life than a *Cat*, or a *Parrot*, would call him still a *Man*; or whoever should hear a *Cat*, or a *Parrot*, discourse, reason, and philosophize, would call, or think, it nothing but a *Cat*, or a *Parrot*; and say, the one was a dull, irrational *Man*,

* *Memoirs of what pass'd in Christendom from 1672, to 1679, P. 552.*

Man, and the other a very intelligent, rational *Parrot*. A Relation we have in an Author of great Note, is sufficient to countenance the Supposition of a rational *Parrot*. His Words * are :

' I HAD a mind to know, from Prince Maurice's own Mouth, ' the Account of a common, but much credited Story, that I ' had heard so often from many others, of an old *Parrot* he had ' in *Brasil*, during his Government there, that spoke, and asked, ' and answered common Questions, like a reasonable Creature : ' So that those of his Train there, generally concluded it to be ' Witchery, or Possession ; and one of his Chaplains, who lived ' long afterwards in *Holland*, would never, from that Time, en- ' dure a *Parrot*, but said, they all had a Devil in them. I had ' heard many Particulars of this Story, and assevered by People ' hard to be discredited, which made me ask Prince Maurice, ' What there was of it ? He said, with his usual Plainness, and ' Dryness in Talk, there was something true, but a great deal ' false, of what had been reported. I desired to know of him, ' what there was of the first ? He told me short and coldly, that ' he had heard of such an old *Parrot*, when he came to *Brasil*; ' and tho' he believ'd nothing of it, and it was a good Way off, ' yet he had so much of Curiosity as to send for it ; that 'twas a ' very great and a very old one ; and when it came first into the ' Room where the Prince was, with a great many *Dutchmen* a- ' bout him, it said presently, *What a Company of White Men are here ? They ask'd it, what he thought that Man was ? pointing at the Prince : It answer'd, Some General or other ; when they*

* *Whence come ye ? it answer'd, From Marinian. The Prince, To whom do you belong ? The Parrot, To a Portugueze. Prince, What do you there ? Par-*

' brought it close to him, he asked it, * *D'o ve- nez vous ?* It answered, *De Marinian.* The Prince, *A qui estes vous ?* The Parrot, *A un Por- tugais.* Prince, *Que fais tu la ?* Parrot, *Je garde lez Poules.* The Prince laugh'd, and said, *Vous gardez les Poules ?* The Parrot answered, *Ouy moy, & je scay bien faire ;* and made the Chuck, four or five times, that People use to make to Chickens when they call them. I set

down

' down the Words of this worthy Dialogue in
 ' French, just as Prince Maurice said them to me.
 ' I asked him in what Language the Parrot spoke;
 ' and he said, in Brasilian: I asked whether he
 ' understood the Brasilian; He said, No; but
 ' he had taken care to have two Interpreters by
 ' him, the one a Dutchman that spoke Brasilian,
 ' and the other a Brasilian, that spoke Dutch;
 ' that he asked them separately and privately,
 ' and both of them agreed in telling him just the same thing that
 ' the Parrot said. I could not but tell this odd Story, because
 ' it is so much out of the Way, and from the first Hand, and what
 ' may pass for a good one: For I dare say this Prince, at least,
 ' believ'd himself in all he told me, having ever passed for a very
 ' honest and pious Man. I leave it to Naturalists to reason, and to
 ' other Men to believe as they please upon it; however, it is not,
 ' perhaps, amiss to relieve, or enliven, a busy Scene sometimes
 ' with such Digressions, whether to the Purpose, or no.

I HAVE taken care that the Reader should have the Story at large, in the Author's own Words, because he seems to me not to have thought it incredible; for it cannot be imagined that so able a Man as he, who had Sufficiency enough to warrant all the Testimonies he gives of himself, should take so much Pains, in a Place where it had nothing to do, to pin so close, not only on a Man whom he mentions as his Friend, but on a Prince, in whom he acknowledges very great Honesty and Piety, a Story, which, if he himself thought incredible, he could not but also think ridiculous. The Prince, 'tis plain, who vouches this Story, and our Author, who relates it from him, both of them call this Talker a Parrot; and I ask any one else, who thinks such a Story fit to be told, whether if this Parrot, and all of its Kind, had always talked, as we have a Prince's Word for it, as this one did, whether, I say, they would not have passed for a Race of *rational Animals*: But yet, whether for all that they would have been allowed to be Men, and not Parrots? For I presume 'tis not the Idea of a thinking, or rational Being alone, that makes the Idea of a Man,

rot, I look after the Chickens.
 The Prince laughed, and said, You look after the Chickens? Parrot answered, Yes I, and I know well enough how to do it.

in most People's Sense, but of a Body, so and so shaped, joined to it ; and, if that be the *Idea* of a *Man*, the same successive Body not shifted all at once, must, as well as the same imaterial Spirit, go to the making of the same *Man*.

Personal Identity. §. 9. THIS being premised, to find wherein *personal Identity* consists, we must consider what

Person stands for ; which, I think, is a thinking; intelligent Being, that has Reason and Reflexion, and can consider itself as itself, the same thinking Thing, in different Times and Places ; which it does only by that Consciousness, which is inseparable from Thinking, and, as it seems to me, essential to it : It being impossible for any one to perceive, without perceiving that he does perceive. When we see, hear, smell, taste, feel, meditate, or will any Thing, we know that we do so. Thus it is always as to our present Sensations and Perceptions : And, by this, every one is to himself that which he calls *Self*; it not being considered in this Case, whether the same *Self* be continued in the same, or divers Substances. For, since Consciousness always accompanies Thinking, and 'tis That that makes every one to be what he calls *Self*, and thereby distinguishes himself from all other thinking Things ; in this alone consists *personal Identity*, i. e. the Sameness of a rational Being : And, as far as this Consciousness can be extended backwards, to any past Action, or Thought, so far reaches the Identity of that *Person*; it is the same *Self* now, it was then ; and 'tis by the same *Self* with this present one, that now reflects on it, that That Action was done.

Consciousness makes personal Identity.

§. 10. BUT it is farther enquir'd, whether it be the same Identical Substance ? This, few would think they had Reason to doubt of, if these Perceptions, with their Consciousness, always remain'd present in the Mind, whereby the same thinking Thing would be always consciously present, and, as would be thought, evidently the same to it self. But that which seems to make the Difficulty is this, that this Consciousness being interrupted always by Forgetfulness, there being no Moment of our Lives,

wherein we have the whole Train of all our past Actions before our

our Eyes in one View, but even the best Memories losing the Sight of one Part, whilst they are viewing another; and we sometimes, and that the greatest Part of our Lives, not reflecting on our past Selves, being intent on our present Thoughts, and in found Sleep, having no Thoughts at all, or, at least, none with that Consciousness, which remarks our waking Thoughts: I say, in all these Cases, our Consciousness being interrupted, and we losing the Sight of our past *Selves*, Doubts are raised, whether we are the same thinking Thing, *i. e.* the same Substance, or no? which, however reasonable, or unreasonable, concerns not *personal Identity* at all: The Question being, what makes the same *Person*, and not whether it be the same Identical Substance, which always thinks in the same Person; which in this Case matters not at all: Different Substances, by the same Consciousness, (where they do partake in it) being united into one Person, as well as different Bodies, by the same Life, are united into one Animal, whose *Identity* is preserved, in that Change of Substances, by the Unity of one continued Life. For, it being the same Consciousness that makes a Man be himself to himself, *personal Identity* depends on that only, whether it be annexed only to one individual Substance, or can be continued in a Succession of several Substances. For, as far as any intelligent Being can repeat the *Idea* of any past Action, with the same Consciousness it had of it at first, and with the same Consciousness it has of any present Action; so far it is the same *personal Self*. For it is by the Consciousness it has of its present Thoughts and Actions, that it is *Self* to it *Self* now, and so will be the same *Self*, as far as the same Consciousness can extend to Actions past, or to come; and would be, by Distance of Time, or Change of Substance, no more two *Persons*, than a Man be two Men, by wearing other Cloaths to Day than he did Yesterday, with a long or short Sleep between: The same Consciousness uniting those distant Actions into the same *Person*, whatever Substances contributed to their Production.

§. 11. THAT this is so, we have some Kind of Evidence in our very Bodies, all whose Particles, whilst vitally united to this same thinking conscious *Self*, so that we feel when they are touch'd, and are affect-

Personal Identity in Change of Substances.

ed by, and conscious of Good, or Harm that happens to them, are a Part of *ourselves*; i. e. of our thinking, conscious *Self*. Thus the Limbs of his Body is to every one a Part of *himself*: He sympathizes and is concerned for them. Cut off an Hand, and thereby separate it from that Consciousness he had of its Heat, Cold, and other Affections, and it is then no longer a Part of that, which is *himself*, any more than the remotest Part of Matter. Thus we see the *Substance*, whereof *personal Self* consisted at one Time, may be varied at another, without the Change of personal *Identity*; there being no Question about the same Person, tho' the Limbs, which but now were a part of it, be cut off.

Whether in the Change of thinking Substances. §. 12. But the Question is, Whether, if the same Substance, which thinks, be changed, it can be the same Person; or remaining the same, it can be different Persons?

AND to this I answer, first, This can be no Question at all to those, who place Thought in a purely material, animal Constitution, void of an immaterial Substance. For, whether their Supposition be true, or no; 'tis plain, they conceive personal Identity preserved in something else than Identity of Substance; as animal Identity is preserved in Identity of Life, and not of Substance. And, therefore, those who place Thinking in an immaterial Substance only, before they can come to deal with these Men, must shew why personal Identity cannot be preserved in the Change of immaterial Substances, or Variety of particular, immaterial Substances, as well as animal Identity, is preserved in the Change of material Substances, or Variety of particular Bodies: Unless they will say, 'tis one immaterial Spirit that makes the same Life in Brutes, as it is one immaterial Spirit that makes the same Person in Men; which the *Cartesians*, at least, will not admit, for fear of making Brutes thinking Things too.

§. 13. But next, as to the first Part of the Question, Whether if the same thinking Substance (supposing immaterial Substances only to think) be changed, it can be the same Person? I answer, That cannot be resolv'd, but by those who know what Kind of Substances they are that do think, and whether the Consciousness of past Actions can be transferred from one thinking

ing Substance to another. I grant, were the same Consciousness the same individual Action, it could not : But it being but a present Representation of a past Action, why it may not be possible, that That may be represented to the Mind to have been, which really never was, will remain to be shewn. And, therefore, how far the Consciousness of past Actions is annexed to any individual Agent, so that another cannot possibly have it, will be hard for us to determine, 'till we know what kind of Action it is, that cannot be done, without a reflex Act of Perception accompanying it, and how performed by thinking Substances, who cannot think without being conscious of it. But that, which we call the *same Consciousness*, not being the same individual Act, why one intellectual Substance may not have represented to it, as done by itself, what it never did, and was, perhaps, done by some other Agent ; why, I say, such a Representation may not possibly be without Reality of Matter of Fact, as well as several Representations in Dreams are, which yet, whilst dreaming, we take for true, will be difficult to conclude from the Nature of Things. And that it never is so, will by us, till we have clearer Views of the Nature of thinking Substances, be best resolved into the Goodness of God, who, as far as the Happiness, or Misery of any of His sensible Creatures is concerned in it, will not by a fatal Error of theirs transfer, from one to another, that Consciousness which draws Reward, or Punishment with it. How far this may be an Argument, against those who would place Thinking in a System of fleeting, animal Spirits, I leave to be consider'd. But yet to return to the Question before us, it must be allow'd, That if the same Consciousness (which, as has been shewn, is quite a different Thing from the same numerical Figure, or Motion in Body) can be transferred from one thinking Substance to another, it will be possible, that two thinking Substances may make but one Person. For the same Consciousness being preserved, whether in the same, or different Substances, the personal Identity is preserved.

§. 14. As to the second Part of the Question, Whether the same immaterial Substance remaining, there may be two distinct Persons? Which Question seems to me to be built on this, Whether

ther the same immaterial Being, being conscious of the Actions of its past Duration, may be wholly stripped of all the Consciousness of its past Existence, and lose it beyond the Power of ever retrieving again ; and so, as it were, beginning a new Account from a new Period, have a Consciousness that cannot reach beyond this new State ? All those, who hold Pre-existence, are evidently of this Mind, since they allow the Soul to have no remaining Consciousness of what it did in that pre-existent State, either wholly separate from Body, or informing any other Body ; and, if they should not, 'tis plain, Experience would be against them : So that personal Identity reaching no farther than Consciousness reaches, a pre-existing Spirit, not having continued so many Ages in a State of Silence, must needs make different Persons. Suppose a *ChristianPlatonist*, or *Pythagorean*, should, upon God's having ended all his Works of Creation the Seventh Day, think his Soul hath existed ever since ; and should imagine it has revolved in several Human Bodies, as I once met with one, who was persuaded his had been the Soul of *Socrates* : (how reasonably, I will not dispute; this I know, that in the Post he fill'd, which was no inconsiderable one, he passed for a very rational Man; and the Press has shewn that he wanted not Parts, or Learning) Would any one say, that he being not conscious of any of *Socrates*'s Actions, or Thoughts, could be the same Person with *Socrates*? Let any one reflect upon himself, and conclude, that he has in himself an immaterial Spirit, which is that which thinks in him, and in the constant Change of his Body keeps him the same ; and is that which he calls himself: Let him also suppose it to be the same Soul, that was in *Nestor*, or *Therstites*, at the Siege of *Troy*, (for Souls being, as far as we know any thing of them in their Nature, indifferent to any Parcel of Matter, the Supposition has no apparent Absurdity in it) which it may have been, as well as it is now, the Soul of any other Man: But he now having no Consciousness of any of the Actions either of *Nestor*, or *Therstites*, does, or can he, conceive himself the same Person with either of them? Can he be concern'd in either of their Actions? Attribute them to himself, or think them his own, more than the Actions of any other Man that ever existed? So that this Consciousness not reaching to any

any of the Actions of either of those Men, he is no more one *Self* with either of them, than if the Soul, or immaterial Spirit, that now informs him, had been created, and began to exist, when it began to inform his present Body; tho' it were ever so true, that the same Spirit that inform'd *Nestor's*, or *Therites's* Body, were numerically the same that now informs his. For this would no more make him the same Person with *Nestor*, than if some of the Particles of Matter, that were once a Part of *Nestor*, were now a Part of this Man; the same immaterial Substance, without the same Consciousness, no more making the same Person, by being united to any Body, than the same Particle of Matter, without Consciousness united to any Body, makes the same Person. But let him once find himself conscious of any of the Actions of *Nestor*, he then finds himself the same Person with *Nestor*.

§. 15. AND thus we may be able, without any Difficulty, to conceive the same Person at the Resurrection, tho' in a Body not exactly in Make, or Parts, the same which he had here, the same Consciousness going along with the Soul that inhabits it. But yet the Soul alone, in the Change of Bodies, would scarce to any one, but to him that makes the Soul the *Man*, be enough to make the same *Man*. For should the Soul of a Prince, carrying with it the Consciousness of the Prince's past Life, enter and inform the Body of a Cobler, as soon as deserted by his own Soul, every one sees he would be the same Person with the Prince, accountable only for the Prince's Actions: But who would say it was the same *Man*? The Body too goes to the making the *Man*, and would, I guess, to every Body, determine the *Man* in this Case; wherein the Soul, with all its princely Thoughts about it, would not make another *Man*: But he would be the same Cobler to every one, besides himself. I know that, in the ordinary Way of speaking, the same Person, and the same *Man*, stand for one and the same Thing. And, indeed, every one will always have a Liberty to speak as he pleases, and to apply what articulate Sounds to what *Ideas* he thinks fit, and change them as often as he pleases. But yet, when we will enquire what makes the same *Spirit, Man, or Person*, we must fix the *Ideas* of *Spirit, Man, or Person* in our Minds; and having resolv'd

resolv'd with ourselves what we mean by them, it will not be hard to determine in either of them, or the like, when it is the *same*, and when not.

Consciousness makes the same Person. §. 16. BUT tho' the same immaterial Substance, or Soul, does not alone, wherever it be, and in whatsoever State, make the same Man;

yet 'tis plain, Consciousness, as far as ever it can be extended, should it be to Ages past, unites Existence and Actions, very remote in Time, into the same Person, as well as it does the Existences and Actions of the immediately preceeding Moment: So that whatever has the Consciousness of present and past Actions, is the same Person to whom they both belong. Had I the same Consciousness, that I saw the Ark, and Noah's Flood, as that I saw an overflowing of the *Thames* last Winter, or as that I write now, I could no more doubt that I who write this now, that saw the *Thames* overflow'd last Winter, and that viewed the Flood at the general Deluge, was the same *Self*, place that *Self* in what Substance you please, than that I who write this, am the same *my Self* now whilst I write (whether I consist of all the same Substance, material, or immaterial, or no) that I was Yesterday. For as to this Point of being the same *Self*, it matters not whether this present *Self* be made up of the same or other Substances; I being as much concern'd, and as justly accountable for any Action was done a thousand Years since, appropriated to me now by this *Self*-consciousness, as I am for what I did the last moment.

Self depends on Consciousness.

§. 17. SELF is that conscious thinking Thing, (whatever Substance made up of, whether spiritual, or material, simple, or compounded, it matters not) which is sensible, or conscious of

Pleasure and Pain, capable of Happiness, or Misery, and so is concern'd for it *Self*, as far as that Consciousness extends. Thus every one finds, that whilst comprehended under that Consciousness, the little Finger is as much a Part of it *Self*, as what is most so. Upon Separation of this little Finger, should this Consciousness go along with the little Finger, and leave the rest of the Body, 'tis evident the little Finger would be the *Person*, the *same Person*; and *Self* then would have nothing to do with the rest of the Body. As in this Case, it is the Conscious-

ness

ncfs that goes along with the Substance, when one Part is separate from another, which makes the same *Person*, and constitutes this inseparable *Self*; so it is in Reference to Substances remote in Time. That, with which the *Consciousness* of this present thinking Thing can join itself, makes the same *Person*, and is one *Self* with it, and with nothing else; and so attributes to it *Self*, and owns all the Actions of that Thing as its own, as far as that Consciousness reaches, and no farther: As every one who reflects, will perceive.

§. 18. In this *Personal Identity*, is founded all the Right and Justice of Reward and Punishment; Happiness and Misery being that for which every one is concern'd for *himself*, not mattering what becomes of any Substance, not joined to, or affected with that Consciousness. For, as it is evident in the Instance I gave but now, if the Consciousness went along with the little Finger when it was cut off, that would be the same *Self* which was concerned for the whole Body Yesterday, as making a Part of it *Self*, whose Actions then it cannot but admit as its own now. Tho' if the same Body should still live, and immediately, from the Separation of the little Finger, have its own peculiar Consciousness, whereof the little Finger knew nothing; it would not at all be concern'd for it, as a Part of it *Self*, or could own any of its Actions, or have any of them imputed to him.

§. 19. THIS may shew us, wherein *personal Identity* consists, not in the Identity of Substance, but, as I have said, in the Identity of *Consciousness*; wherin, if *Socrates*, and the present Mayor of Queenborough agree, they are the same Person: If the same *Socrates*, waking and sleeping, do not partake of the same *Consciousness*, *Socrates* waking and sleeping is not the same Person. And to punish *Socrates* waking for what sleeping *Socrates* thought, and waking *Socrates* was never conscious of, would be no more of Right, than to punish one Twin for what his Brother-Twin did, whereof he knew nothing, because their Out-sides were so like, that they could not be distinguish'd; for such Twins have been seen.

§. 20. But yet, possibly, it will still be objected; suppose I wholly

wholly lose the Memory of some Parts of my Life, beyond a Possibility of retrieving them, so that, perhaps, I shall never be conscious of them again: Yet am I not the same Person that did those Actions, had those Thoughts that I once was conscious of, tho' I have now forgot them? To which I answer, that we must here take notice what the Word *I* is applied to: Which, in this Case, is the Man only. And the same Man being presumed to be the same Person, *I* is easily here supposed to stand also for the same Person. But if it be possible for the same Man to have distinct incommunicable Consciousnesses, at different times, it is past doubt the same Man would, at different times, make different Persons; which, we see, is the Sense of Mankind, in the solemnest Declaration of their Opinions, human Laws not punishing the *mad Man* for the *sober Man's* Actions, nor the *sober Man* for what the *mad Man* did, thereby making them two Persons: Which is somewhat explain'd by our way of speaking in *English*, when we say, such an one is *not himself*, or is *besides himself*; in which Phrases it is insinuated, as if those who now, or, at least, first used them, thought that *self* was changed, the *self* same Person was no longer in that Man.

Difference between Identity of Man and Person.

§. 21. But yet it is hard to conceive, that *Socrates*, the same individual Man, should be two Persons. To help us a little in this, we must consider what is meant by *Socrates*, or the same individual *Man*.

First, It must be either the same individual, immaterial, thinking Substance; in short, the same numeric Soul, and nothing else.

Secondly, On the same Animal, without any regard to an immaterial Soul.

Thirdly, On the same immaterial Spirit, united to the same Animal.

Now, take which of these Suppositions you please, it is impossible to make personal Identity to consist in any thing but Consciousness, or reach any farther than that does.

For, by the first of them, it must be allow'd possible, that a Man, born of different Women, and in distant Times, may be the same Man. A way of speaking, which, whoever admits, must

must allow it possible for the same Man to be two distinct Persons, as any two that have liv'd in different Ages, without the Knowledge of one another's Thoughts.

By the second and third, *Socrates* in this Life, and after it, cannot be the same Man any way, but by the same Consciousness; and so making *human Identity* to consist in the same Thing, wherein we place *personal Identity*, there will be no difficulty to allow the same Man to be the same Person. But then they, who place *human Identity*, in Consciousness only, and not in something else, must consider how they will make the Infant *Socrates* the same Man with *Socrates* after the Resurrection. But whatsoever to some Men makes a *Man*, and consequently the same individual Man, wherein, perhaps, few are agreed, personal Identity can by us be placed in nothing but Consciousness, (which is that alone which makes what we call *Self*) without involving us in great Absurdities.

§. 22. BUT is not a Man drunk and sober the same Person? Why else is he punished for the Fact he commits when drunk, tho' he be never afterwards conscious of it? Just as much the same Person, as a Man that walks, and does other Things in his Sleep, is the same Person, and is answerable for any Mischief he shall do in it. Human Laws punish both, with a Justice suitable to their way of Knowledge; because, in these Cases, they cannot distinguish, certainly, what is real, what counterfeit: And so the Ignorance in Drunkenness, or Sleep, is not admitted as a Plea. For tho' Punishment be annexed to Personality, and Personality to Consciousness, and the Drunkard, perhaps, be not conscious of what he did; yet human Judicatures justly punish him; because the Fact is proved against him; but want of Consciousness cannot be proved for him. But, in the Great Day, wherein the Secrets of all Hearts shall be laid open, it may be reasonable to think, no one shall be made to answer for what he knows nothing of; but shall receive his Doom, his Conscience accusing, or excusing him.

§. 23. NOTHING but Consciousness can unite remote Existences into the same Person, the Identity of Substance will not do it. For what-

*Consciousness
alone makes
Self.*

ever Substance there is, however framed, without Consciousness, there is no Person: And a Carcase may be a Person, as well as any sort of Substance be so, without Consciousness.

COULD we suppose two distinct, incommunicable Consciousnesses acting the same Body, the one constantly by Day, the other by Night; and, on the other side, the same Consciousness, acting by Intervals, two distinct Bodies: I ask, in the first Case, whether the *Day* and the *Night Man* would not be two as distinct Persons, as *Socrates* and *Plato*? And whether, in the second Case, there would not be one Person, in two distinct Bodies, as much as one Man is the same in two distinct Cloathings? Nor is it at all material to say, that this same, and this distinct Consciousness, in the Cases above mentioned, is owing to the same and distinct, immaterial Substances, bringing it with them to those Bodies; which, whether true, or no, alters not the Case; since it is evident the *personal Identity* would equally be determin'd by the Consciousness, whether that Consciousness were annexed to some individual, immaterial Substance, or no. For granting, that the thinking Substance in Man must be necessarily supposed immaterial, it is evident, that immaterial, thinking Thing may sometimes part with its past Consciousness, and be restored to it again; as appears in the Forgetfulness Men often have of their past Actions: And the Mind many times recovers the Memory of a past Consciousness, which it had lost for twenty Years together. Make these Intervals of Memory and Forgetfulness to take their Turns regularly by Day and Night, and you have two Persons, with the same immaterial Spirit, as much as in the former Instance two Persons with the same Body. So that *Self* is not determined by Identity, or Diversity of Substance, which it cannot be sure of, but only by Identity of Consciousness.

§. 24. INDEED it may conceive the Substance, whereof it is now made up, to have existed formerly, united in the same conscious Being: But, Consciousness removed, that Substance is no more its *Self*, or makes no more a Part of it, than any other Substance; as is evident in the Instance we have already given, of a Limb cut off, of whose Heat, or Cold, or other Affections,

ons, having no longer any Consciousness, it is no more of a Man's self, than any other Matter of the Universe. In like manner it will be in reference to any immaterial Substance, which is void of that Consciousness, whereby I am my *Self* to my *Self*: If there be any Part of its Existence, which I cannot upon Recollection join with that present Consciousness; whereby I am now my *Self*, it is in that Part of its Existence no more my *Self*, than any other immaterial Being. For whatsoever any Substance has thought, or done, which I cannot recollect, and by my Consciousness make my own Thought and Action, it will no more belong to me, whether a Part of me thought, or did it, than if it had been thought, or done, by any other immaterial Being, any where existing.

§. 25. I AGREE, the more probable Opinion is, that this Consciousness is annex'd to, and the Affection of one individual, immaterial Substance.

BUT let Men, according to their divers Hypotheses, resolve of that as they please. This every intelligent Being, sensible of Happiness, or Misery, must grant, that there is something that is *himself*, that he is concern'd for, and would have happy; that this *Self* has existed in a continu'd Duration more than one Instant, and, therefore, it is possible may exist, as it has done, Months and Years to come, without any certain Bounds to be set to its Duration; and may be the *same Self*, by the same Consciousness, continu'd on for the future. And thus, by this Consciousness, he finds himself to be the *same Self* which did such, or such an Action some Years since, by which he comes to be happy, or miserable, now. In all which Account of *Self*, the same numerical Substance is not considered as making the *same Self*; but the *same continu'd Consciousness*, in which several Substances may have been united, and again separated from it, which, whilst they continu'd in a vital Union with that, wherein this Consciousness then resided, made a Part of that *same Self*. Thus any Part of our Bodies, vitally united to that which is conscious in us, makes a Part of our *selves*: But upon Separation from the vital Union, by which that Consciousness is communicated, that which a Moment since was Part of our *selves*, is now no more

so, than a Part of another Man's *self* is a Part of me ; and it is not impossible, but in a little Time may become a real Part of another Person. And so we have the same numerical Substance become a Part of two different Persons ; and the same Person preserv'd under the Change of various Substances. Could we suppose any Spirit wholly stript of all its Memory, or Consciousness of past Actions, as we find our Minds always are of a great Part of ours, and sometimes of them all ; the Union, or Separation, of such a spiritual Substance would make no Variation of personal Identity, any more than that of any Particle of Matter does. Any Substance vitally united to the present thinking Being, is a Part of that very *same Self*, which now is : Any Thing united to it by a Consciousness of former Actions, makes also a Part of the *same Self*, which is the same both then and now.

Person, a forensic Term §. 26. PERSON, as I take it, is the Name for this *Self*. Where ever a Man finds what he calls *Himself*, there, I think, another may say is the *same Person*. It is a forensic Term, appropriating Actions and their Merit ; and so belongs only to intelligent Agents, capable of a Law, and Happiness and Misery. This Personality extends *itself* beyond present Existence to what is past, only by Consciousness, whereby it becomes concerned and accountable, owns and imputes to *itself* past Actions, just upon the same Ground, and for the same Reason that it does the present. All which is founded in a Concern for Happiness, the unavoidable Concomitant of Consciousness ; that which is conscious of Pleasure and Pain, desiring that That *Self* that is conscious, should be happy. And, therefore, whatever past Actions it cannot reconcile, or appropriate, to that present *Self* by Consciousness, it can be no more concerned in, than if they never had been done : And to receive Pleasure, or Pain, i. e. Reward, or Punishment, on the Account of any such Action, is all one, as to be made happy, or miserable in his first Being, without any Demerit at all. For, supposing a Man punish'd now for what he had done in another Life, whereof he could be made to have no Consciousness at all, What Difference is there between that Punishment, and being created miserable ? And, therefore, conformable

able to this, the Apostle tells us, that, at the Great Day, when every one shall receive according to his Doings, the Secrets of all Hearts shall be laid open. The Sentence shall be justified by the Consciousness all Persons shall have, that they themselves, in what Bodies soever they appear, or what Substances soever that Consciousness adheres to, are the same, that committed those Actions, and deserve that Punishment for them.

§. 27. I AM apt enough to think I have, in treating of this Subject, made some Suppositions that will look strange to some Readers, and, possibly, they are so in themselves: But, yet, I think, they are such as are pardonable in this Ignorance we are in of the Nature of that thinking Thing that is in us, and which we look on as ourselves. Did we know what it was, or how it was tied to a certain System of fleeting, Animal Spirits; or whether it could, or could not perform its Operations of Thinking and Memory, out of a Body organized as ours is; and whether it has pleased God, that no one such Spirit shall ever be united to any, but one such Body, upon the right Constitution of whose Organs its Memory should depend; we might see the Absurdity of some of those Suppositions I have made. But taking, as we ordinarily now do, (in the Dark, concerning these Matters) the Soul of a Man, for an immaterial Substance, independent from Matter, and indifferent alike to it all, there can, from the Nature of Things, be no Absurdity at all, to suppose, that the same Soul may, at different Times, be united to different Bodies, and with them make up, for that Time, one Man; as well as we suppose a Part of a Sheep's Body Yesterday, should be a Part of Man's Body To-morrow, and, in that Union, make up a vital Part of Melibæus himself, as well as it did of his Ram.

§. 28. To conclude; whatever Substance begins to exist, it must, during its Existence, necessarily be the same: Whatever Compositions of Substances begin to exist, during the Union of those Substances, the Concrete must be the same: Whatsoever Mode begins to exist, during its Existence, it is the same: And so, if the Composition be of distinct Substances, and different Modes, the same Rule holds. Whereby it will appear, that

*The Difficulty
from ill Use of
Names.*

the

the Difficulty, or Obscurity, that has been about this Matter, rather rises from the Names ill used, than from any Obscurity in Things themselves. For, whatever makes the specific *Idea*, to which the Name is applied, if that *Idea* be steadily kept to, the Distinction of any Thing into the same, and divers, will easily be concceived, and there can arise no doubt about it.

Continued Ex. §. 29. For, supposing a rational Spirit be the *istence makes Idea of a Man*, 'tis easy to know what is the *Identity*. *same Man, viz. the same Spirit*, whether sepa-

rate, or in a Body, will be the *same Man*. Supposing a rational Spirit, vitally united to a Body of a certain Conformation of Parts, to make a *Man*, whilst that rational Spirit, with that vital Conformation of Parts, tho' continued in a fleeting, successive Body, remains, it will be the *same Man*. But if, to any one, the *Idea* of a Man be but the vital Union of Parts in a certain Shape; as long as that vital Union and Shape remains, in a Concrete no otherwise the same, but by a continued Succession of fleeting Particles, it will be the *same Man*. For, whatever be the Composition, whereof the Complex *Idea* is made, whenever Existence makes it one particular Thing, under any Denomination, the same Existence continued, preserves it the same individual, under the same Denomination*.

C H A P.

* THE Doctrine of Identity and Diversity contained in this Chapter, the Bishop of Worcester pretends to be inconsistent with the Doctrines of the Christian Faith, concerning the Resurrection of the Dead. His Way of arguing from it, is this: He says, *the Reason of believing the Resurrection of the same Body, upon Mr. Locke's Grounds, is from the Idea of Identity*. To which

* In his 3d Letter to the Bishop of Worcester, P. 167, &c. our Author * answers: Give me Leave, my Lord, to say, that the *Reason of believing any Article of the Christian Faith* (such as your Lordship is here speaking of) to me, and *upon my Grounds*, is its being a Part of Divine Revelation. Upon this Ground

I believed it, before I either writ that Chapter of *Identity and Diversity*; and before I ever thought of those Propositions, which your Lordship quotes out of that Chapter: And, upon the same Ground, I believe it still; and not *from my Idea of Identity*. This Saying of your Lordship's, therefore, being a Proposition neither self-evident, nor allowed by me to be true, remains to be proved. So that your Foundation

Foundation failing, all your large Superstructure built thereon, comes to nothing.

BUT, my Lord, before we go any farther, I crave Leave humbly to represent to your Lordship, that I thought you undertook to make out, that my *Notion of Ideas* was inconsistent with the *Articles of the Christian Faith*. But that, which your Lordship instances in here, is not, that I yet know, an *Article of the Christian Faith*. The *Resurrection of the Dead*, I acknowledge to be an Article of the Christian Faith; but that the *Resurrection of the same Body*, in your Lordship's Sense of the *same Body*, is an Article of the Christian Faith, is, what, I confess, I do not yet know.

IN the New Testament (wherein, I think, are contained all the *Articles of the Christian Faith*) I find our Saviour and the Apostles to preach the *Resurrection of the Dead*, and the *Resurrection from the Dead*, in many Places: But I do not remember any Place, where the *Resurrection of the same Body* is so much as mentioned. Nay, which is very remarkable in the Case, I do not remember, in any Place of the New Testament, (where the general Resurrection at the last Day is spoken of) any such Expression, as the *Resurrection of the Body*, much less of the *same Body*.

I SAY, the general Resurrection at the last Day; because where the Resurrection of some particular Persons, presently upon our Saviour's Resurrection, is mentioned, the Words are, * *The Graves were opened, and many Bodies of Saints, which slept, arose, and came out of the Graves, after his Resurrection, and went into the Holy City, and appeared to many.*

Of which peculiar Way of speaking of this Resurrection, the Passage itself gives a Reason in these Words, *appeared to many; i. e. those who slept, appeared, so as to be known to be risen.* But this could not be known, unless they brought with them the Evidence, that they were those, who had been dead, whereof there were these two Proofs, their Graves were opened, and their Bodies not only gone out of them, but appeared to be the same to those, who had known them formerly alive, and knew them to be dead and buried. For if they had been those, who had been dead so long, that all, who knew them once alive, were now gone, those, to whom they appeared, might have known them to be Men; but could not have known they were risen from the Dead, because they never knew they had been dead. All that, by their appearing, they could have known, was, that they were so many living Strangers, of whose Resurrection they knew nothing. 'Twas necessary, therefore, that they should come in such Bodies, as might, in Make and Size, &c. appear to be the same they had before, that they might be known to those of their Acquaintance, whom they appeared to. And it is probable, they were such as were newly dead, whose Bodies were not yet dissolved, and dissipated; and, therefore, 'tis particularly said here, (differently from what is said of the general Resurrection) That their Bodies arose; because they were the same, that were then lying in their Graves, the Moment before they rose.

BUT your Lordship endeavours to prove, it must be the *same Body*: And let us grant, that your Lordship, nay, and others too, think you have proved, it *must* be the same Body; will you therefore say, that he holds, what is inconsistent with an Article of Faith, who having never seen this your Lordship's Interpretation of the Scripture, nor your Reasons for the *same Body*, in your Sense of *same Body*; or, if he has seen them, yet not understanding them, or not perceiving the Force of them, believes what the Scripture proposes to him, *viz.* That at the last Day, the *Dead shall be raised*, without determining, whether it shall be with the very same Bodies, or no.

I KNOW, your Lordship pretends not to erect your particular Interpretations of Scripture, into Articles of Faith: And, if you do not, he that believes the *Dead shall be raised*, believes that Article of Faith, which the Scripture proposes; and cannot be accused of holding any thing inconsistent with it, if it should happen, that what he holds, is inconsistent with another Proposition, *viz.* *That the Dead shall be raised with the same Bodies*, in your Lordship's Sense; which I do not find proposed in Holy Writ as an Article of Faith.

BUT your Lordship argues, *it must be the same*

* P. 34. 35. *Body*; which, as you explain *same Body* * is not the *same individual Particles of Matter*, which were *united at the Point of Death*; nor the *same Particles of Matter*, that the *Sinner had, at the Time of the Commission of his Sins*: But that it must be the *same material Substance*, which was *vitally united to the Soul here*; i. e. as I understand it, the *same individual Particles of Matter*, which were, some Time or other, during this Life here, vitally united to his Soul.

YOUR first Argument to prove, that *it must be the same Body*, in this Sense of the *same Body*, is taken ‡ from these Words of our Saviour, *All that are in the Graves shall hear his Voice, and shall come forth* ‡. From whence your Lordship argues, That these Words, *all that are in their Graves, relate to no other Substance than what was united to the Soul, in Life*; because a different Substance cannot be said to be in the Graves, and to come out of them. Which Words of your Lordship's, if they prove any Thing, prove, that the Soul too is lodged in the Grave, and raised out of it, at the last Day. For your Lordship says, *Can a different Substance be said to be in their Graves, and come out of them?* So that, according to this Interpretation of these Words of our Saviour, *No other Substance* being raised, but what hears His Voice; and *no other Substance* hearing His Voice, but what being called, comes out of the Grave; and *no other Substance* coming out of the Grave, but what was in the Grave; any one must conclude, that the Soul, unless it be in the Grave, will make no part of the Person that is raised, unless,

‡ John v. 28,
29. ‡ P. 37. as your Lordship argues against me §, *You can make it out, that a Substance which never was in the Grave, may come out of it, or that the Soul is no Substance*,

§ P. 37.

BUT

BUT, setting aside the Substance of the Soul, another Thing that will make any one doubt, whether this your Interpretation of our Saviour's Words be necessarily to be received, as their true Sense, is, That it will not be very easily reconciled to your Saying, * you do not mean by the same Body, *The same individual Particles, which were united at the Point of Death.* And yet, by this Interpretation of our Saviour's Words, you can mean no other Particles, but such as were united at the Point of Death; because you mean no other Substance, but what comes out of the Grave; and no Substance, no Particles come out, you say, but what were in the Grave; and, I think, your Lordship will not say, that the Particles that were separate from the Body by Per-spiration, before the Point of Death, were laid up in the Grave.

BUT your Lordship, I find, has an Answer to this, viz. † *That, by comparing this with other Places,* † P. 37. you find that the Words [of our Saviour, above quoted] are to be understood of the Substance of the Body, to which the Soul was united; and not to (I suppose your Lordship writ, of) those individual Particles, i. e. those individual Particles, that are in the Grave, at the Resurrection; for so they must read, to make your Lordship's Sense entire, and to the Purpose of your Answer here: And then, methinks, this last Sense of our Saviour's Words, given by your Lordship, wholly overturns the Sense which you have given of them above; where, from those Words, you prefs the Belief of the Resurrection of the same Body, by this strong Argument, that a Substance could not, upon hearing the Voice of Christ, come out of the Grave, which was never in the Grave; there (as far as I can understand your Words) your Lordship argues, that our Saviour's Words must be understood of the Particles in the Grave, unless, as your Lordship says, one can make it out, that a Substance, which never was in the Grave, may come out of it. And here your Lordship expressly says, That our Saviour's Words are to be understood of the Substance of that Body, to which the Soul was [at any Time] united, and not to those individual Particles, that are in the Grave. Which, put together, seems to me to say, That our Saviour's Words are to understood of those Particles only that are in the Grave, and not of those Particles only, which are in the Grave; but of others also, which have, at any time, been vitally united to the Soul, but never were in the Grave.

THE next Text your Lordship brings, to make the Resurrection of the same Body, in your Sense, an Article of Faith, are these Words of St. Paul: ‡ *For we must all appear before the Judgment-Seat of Christ, that every one may receive the Things done in his Body, according to that he hath done, whether it be good, or bad.* To which your Lordship subjoins || this Question; *Can these Words be understood of any other material Substance, but that Body, in which these Things were done?* Answer. A Man may suspend his determining the Meaning of the Apostle to be, that a Sinner shall suffer for his Sins in the very same Body, wherein he

committed them ; because St. Paul does not say he shall have the very *same Body*, when he suffers, that he had, when he sinn'd. The Apostle says indeed, done *in his Body*. The Body he had, and did Things in, at Five, or Fifteen, was, no doubt, *his Body*, as much as that, which he did Things in, at Fifty, was *his Body*, tho' *his Body* were not the *very same Body*, at those different Ages : And so will the Body, which he shall have, after the Resurrection, be his Body, tho' it be not the *very same* with that, which he had at Five, or Fifteen, or Fifty. He that at Threescore is broke on the Wheel, for a Murder he committed at Twenty, is punished for what he did in his Body ; tho' the Body he has, i. e. his Body at Threescore, be not the same, i. e. made up of the same individual Particles of Matter, that that Body was, which he had forty Years before. When your Lordship has resolved with yourself, what that same immutable, *he*, is, which at the last Judgment shall receive the Things done in *his Body* ; your Lordship will easily see, that the Body he had, when an *Embryo* in the Womb, when a Child playing in Coats, when a Man marrying a Wife, and when Bed-rid, dying of a Consumption, and, at last, which he shall have after his Resurrection, are each of them, *his Body*, tho' neither of them be the *same Body*, the one with the other.

BUT farther, to your Lordship's Question ; *Can these Words be understood of any other material Substance, but that Body, in which these Things were done?* I answer, These Words of St. Paul may be understood of another material Substance, than that Body, in which these Things were done ; because your Lordship teaches me, and gives me

* P. 34. a strong Reason, so to understand them. Your Lord-

ship says, * That, you do not say the same Particles

of Matter, which the Sinner had, at the very Time

of the Commission of his Sins, shall be raised at the Last Day. And

your Lordship gives this Reason for it : † For then

† P. 35. a long Sinner must have a vast Body, considering the

continual spending of Particles by Perspiration.

Now, my Lord, if the Apostle's Words, as your Lordship would argue, cannot be understood of any other material Substance, but that Body, in which these Things were done ; and no Body, upon the Removal, or Change, of some of the Particles, that, at any Time, makes it up, is the same material Substance, or the same Body : It will, I think, thence follow, that either the Sinner must have all the same individual Particles, vitally united to his Soul, when he is raised, that he had vitally united to his Soul, when he sinn'd : Or else St. Paul's Words, here, cannot be understood to mean the *same Body*, in which the Things were done. For if there were other Particles of Matter, in the Body, wherein the Things were done, than in that, which is raised, that which is raised, cannot be the *same Body* in which they were done : Unless that alone, which has just all the same individual Particles, when any Action is done, being the *same Body*, wherein it was done, that also, which has not the same individual Particles, wherein that Action was done, can be the *same Body*,

wherein

wherein it was done; which is, in effect, to make the same Body, sometimes to be the same, and sometimes not the same.

YOUR Lordship thinks it suffices to make the *same Body*, to have not all, but no other Particles of Matter, but such as were some time, or other, vitally united to the Soul before: But such a Body, made up Part of the Particles some time, or other, vitally united to the Soul, is no more the same Body, wherein the Actions were done, in the distant Parts of the *long Sinner's Life*, than that is the same Body, in which a quarter, or half, or three quarters, of the same Particles, that made it up, are wanting. For Example; A Sinner has acted here, in his *Body*, an hundred Years; he is raised at the Last Day, but with what Body? The same, says your Lordship, that he acted in; because St. Paul says, *he must receive the Things done in his Body*. What, therefore, must his Body at the Resurrection consist of? Must it consist of all the Particles of Matter, that have ever been vitally united to his Soul? For they, in Succession, have, all of them, made up *his Body*, wherein he did *These Things*. No, says your Lordship, * that would make * P. 35. his Body too *vast*; it suffices to make the same Body, in which the Things were done, that it consists of some of the Particles, and no other, but such as were, some time, during his Life, vitally united to his Soul. But, according to this Account, *his Body*, at the Resurrection, being, as your Lordship seems to limit it, near the same Size it was, in some Part of his Life; it will be no more the *same Body*, in which the *Things were done*, in the distant Parts of his Life, than that is the *same Body*, in which the half, or three quarters, or more of the individual Matter, that then made it up, is now wanting. For Example; Let *his Body*, at fifty Years old, consist of a Million of Parts; five hundred thousand at least of those Parts will be different from those, which made up *his Body* at ten Years, and at an hundred. So that to take the numerical Particles, that made up his Body at fifty, or any other Season of his Life; or to gather them promiscuously out of those, which at different Times, have successively been vitally united to his Soul; they will no more make the same Body, which was *his*, wherein some of his Actions were done, than that is the same Body, which has but half the same Particles: And yet all your Lordship's Argument, here, for the same Body, is, because St. Paul says it must be *his Body, in which these Things were done*; which it could not be, if *any other Substance were joined to it*, i. e. if any other Particles of Matter made up the Body, which were not vitally united to the Soul, when the Action was done.

AGAIN, your Lordship says, † *That you do not say the same individual Particles [shall make up the Body at the Resurrection] which were united at the Point of Death; for there must be a great Alteration in them, in a lingering Disease, as, if a fat Man falls into a Consumption. Because, 'tis likely, your Lordship thinks these Particles of a decrepit, wasted, wither'd Body, would be too few, or unfit, to make such a plump, strong,*

strong, vigorous, well-sized Body, as it has pleased your Lordship to proportion out, in your Thoughts, to Men, at the Resurrection; and, therefore, some small Portion of the Particles formerly united vitally to that Man's Soul, shall be re-assumed to make up his Body to the Bulk, your Lordship judges convenient; but the greatest Part of them shall be left out, to avoid the making his Body more *vast*, than your Lordship thinks will be fit, as appears, by these your Lordship's Words, immediately following, *viz.* † *That you do not say, the same Particles the Sinner had, at the very time of Commission of his Sins; for then a long Sinner must have a vast Body.*

BUT then, pray, my Lord, what must an *Embryo* do, who, dying within a few Hours after his Body was vitally united to his Soul, has no Particles of Matter, which were formerly vitally united to it, to make up his Body, of that Size and Proportion, which your Lordship seems to require, in Bodies at the Resurrection? Or must we believe he shall remain content with that small Pittance of Matter, and that yet imperfect Body, to Eternity, because it is an Article of Faith, to believe the *Resurrection of the very same Body?* i. e. made up of only such Particles, as have been vitally united to the Soul. For if

† P. 43. it be so, as your Lordship says, ‡ *That Life is the Result of the Union of Soul and Body*, it will follow,

That the Body of an *Embryo*, dying in the Womb, may be very little, not the thousandth Part of any ordinary Man. For since, from the first Conception and Beginning of Formation, it has Life, and *Life is the Result of the Union of the Soul with the Body*; an *Embryo*, that shall die, either by the untimely Death of the Mother, or by any other Accident, presently after it has Life, must, according to your Lordship's Doctrine, remain a Man, not an Inch long, to Eternity; because there are not Particles of Matter, formerly united to his Soul, to make him bigger; and no other can be made use of, to that Purpose: Tho' what greater Congruity the Soul hath with any Particles of Matter, which were once vitally united to it, but are now so no longer, than it hath with Particles of Matter, which it was never united to, would be hard to determine, if that should be demanded.

By these, and not a few other the like Consequences, one may see, what Service they do to Religion, and the Christian Doctrine, who raise Questions, and make Articles of Faith, about the *Resurrection of the same Body*, where the Scripture says nothing of *the same Body*;

* *1 Cor. xv. 35, &c.* or, if it does, it is with no small Reprimand * to those, who make such an Enquiry. But some Men will say, *How are the Dead raised up? and with what Body do they come? Thou Fool, that, which thou sowest, is not quickened, except it die. And that, which thou sowest, thou sowest not that Body, that shall be, but bare Grain; it may chance of Wheat, or of some other Grain: But God giveth it a Body, as it hath pleased him.* Words, I should think, sufficient to deter us from determining any Thing for, or against, the same Body being raised

at the Last Day. It suffices, that all the *Dead shall be raised*, and every one appear and answer for the Things done in this Life, and receive according to the Things, he hath done in his Body, whether good, or bad. He that believes this, and has said nothing inconsistent herewith, I presume, may, and must, be acquitted from being guilty of any Thing inconsistent with the *Articles of the Resurrection of the Dead*.

BUT your Lordship, to prove the *Resurrection of the same Body to be an Article of Faith*, farther asks, || *How could it be said, if any other Substance be joined to the Soul, at the Resurrection, as its Body, that they were the Things done in, or by the Body?* Answ. Just as it may be said of a Man, at an hundred Years old, that hath then another Substance joined to his Soul, than he had at twenty, that the Murder, or Drunkenness, he was guilty of, at twenty, were *Things done in the Body*: How, by the *Body*, comes in here, I do not see.

YOUR Lordship adds, *And St. Paul's Dispute, about the Manner of raising the Body, might soon have ended, if there were no Necessity of the same Body.* Answ. When I understand what Argument there is in these Words, to prove the Resurrection of the same Body, without the Mixture of one new Atom of Matter, I shall know what to say to it. In the mean time, this I understand, That St. Paul would have put as short an End to all Disputes about this Matter, if he had said, *That there was a Necessity of the same Body*, or that it should be the *same Body*.

THE next Text of Scripture you bring, for the same Body, is, † *If there be no Resurrection of the Dead, then is not Christ raised.* From which your Lordship argues; * *It seems, then, other Bodies are to be raised, as his was.*

† Cor. xv. 16.

* P. 38.

I grant other Dead, as certainly raised, as Christ was; for else his Resurrection would be of no use to Mankind: But I do not see how it follows, that they should be raised with the same Body, as Christ was raised with the same Body, as your Lordship infers, in these Words annexed; *And can there be any doubt, whether his Body was the same material Substance, which was united to his Soul before?* I answer, None at all; nor that it had just the same distinguishing Lineaments and Marks; yea, and the same Wounds, that it had at the Time of his Death. If, therefore, your Lordship will argue, from *other Bodies being raised, as his was*, That they must keep Proportion with his, in *Sameness*; then we must believe, that every Man shall be raised with the same Lineaments, and other Notes of Distinction, he had, at the Time of his Death, even with his Wounds yet open, if he had any, because our Saviour was so raised; which seems, to me, scarce reconcileable with what your Lordship says, † *of a fat Man falling into a Consumption, and dying.*

† P. 34.

BUT whether it will consist, or no, with your Lordship's Meaning in that Place, this to me seems a Consequence, that will need to be better proved, viz. That our Bodies must be raised the same, just as our

our Saviour's was; because St. Paul says, *if there be no Resurrection of the Dead, then is not Christ risen.* For it may be a good Consequence, Christ is risen; and, therefore, there shall be a Resurrection of the Dead; and yet this may not be a good Consequence, Christ was raised with the same Body he had at his Death, therefore all Men shall be raised with the same Body they had at their Death, contrary to what your Lordship says, concerning a *fat Man* dying of a *Consumption*. But the Case I think far different, betwixt our Saviour, and those to be raised at the Last Day.

1. HIS Body saw not *Corruption*, and, therefore, to give him another Body, new moulded, mixed with other Particles, which were not contained in it, as it lay in the Grave, whole and entire, as it was laid there, had been to destroy his Body, to frame him a new one, without any Need. But why with the remaining Particles of a Man's Body, long since dissolved, and mouldred into Dust and Atoms, (whereof, possibly, a great Part may have undergone Variety of Changes, and enter'd into other Concretions, even in the Bodies of other Men) other new Particles of Matter mixed with them, may not serve to make his Body again, as well as the Mixture of new and different Particles of Matter with the old, did, in the Compas of his Life, make his Body; I think no Reason can be given.

THIS may serve to shew, why, tho' the Materials of our Saviour's Body, were not changed at his Resurrection; yet it does not follow, but that the Body of a Man, dead and rotten in his Grave, or burnt, may, at the Last Day, have several new Particles in it, and that without any Inconvenience: Since, whatever Matter is vitally united to his Soul, is his Body, as much as is that, which was united to it, when he was born, or in any other Part of his Life.

2. IN the next Place, the Size, Shape, Figure, and Lineaments of our Saviour's Body, even to his Wounds, into which doubting Thomas put his Fingers and his Hand, were to be kept, in the raised Body of our Saviour, the same they were at his Death, to be a Conviction to his Disciples, to whom he shew'd himself, and who were to be Witnesses of his Resurrection, that their Master, the very same Man, was crucified, dead, and buried, and raised again; and, therefore, he was handled by them, and eat before them, after he was risen, to give them, in all Points, full Satisfaction, that it was really he, the same, and not another, nor a Spectre, or Apparition, of him: Tho' I do not think your Lordship will thence argue, That because others are to be raised, as he was, therefore it is necessary to believe, that because he eat after his Resurrection, others, at the Last Day, shall eat and drink, after they are raised from the Dead; which seems to me, as good an Argument, as because his undissolved Body was raised out of the Grave, just as it there lay, intire, without the Mixture of any new Particles, therefore the corrupted and consumed Bodies of the Dead, at the Resurrection, shall be new framed, only out of those scatter'd Particles, which were once vitally united to their Souls, without the least Mixture of any one single Atom of new Matter. But, at the Last Day, when all Men are raised, there will be

no need to be assured of any one particular Man's Resurrection. 'Tis enough, that every one shall appear before the Judgment-Seat of Christ, to receive according to what he had done, in his former Life; but, in what Sort of Body he shall appear, or of what Particles made up, the Scripture having said nothing, but that it shall be *a Spiritual Body, raised in Incorruption*, it is not for me to determine.

YOUR Lordship asks, * *Were they [who saw our Saviour after his Resurrection] Witnesses only of some material Substance, then united to his Soul?* In an-

* P. 39.

swer, I beg your Lordship to consider, whether you suppose our Saviour was known to be the same Man (to the Witnesses, that were to see him, and testify of his Resurrection) by his Soul, that could neither be seen, nor known to be the same; or by his Body, that could be seen, and by the discernible Structure and Marks of it, be known to be the same? When your Lordship has resolved that, all that you say in that Page, will answer itself. But, because one Man cannot know another to be the same, but by the outward, visible Lineaments, and sensible Marks, he has been wont to be known and distinguished by; will your Lordship therefore argue, that the Great Judge, at the Last Day, who gives to each Man, whom He raises, his new Body, shall not be able to know who is who, unless He gives to every one of them a Body, just of the same Figure, Size, and Features, and made up of the very same individual Particles, he had in his former Life? Whether such a Way of arguing for the *Resurrection of the same Body, to be an Article of Faith*, contributes much to the strengthening the Credibility of the Article of the Resurrection of the Dead, I shall leave to the Judgment of others.

FARTHER, for the proving *the Resurrection of the same Body, to be an Article of Faith*, your Lordship † P. 40. says, † *But the Apostle insists upon the Resurrection of Christ, not merely as an Argument of the Possibility of ours, but of the Certainty of it; ‡ because he rose, as the First-Fruits; Christ the First-Fruits, afterwards they that are Christ's at his Coming.* Answ. No doubt, the † 1 Cor. xv. 20. 23. *Resurrection of Christ is a Proof of the Certainty of our Resurrection.* But is it, therefore, a Proof of the Resurrection of the *same Body*, consisting of the same individual Particles, which concur'd to the making up of our Body here, without the Mixture of any one other Particle of Matter? I confess, I see no such Consequence.

BUT your Lordship goes on: || *St. Paul was aware of the Objections in Mens Minds, about the Resurrection of the same Body; and 'tis of great Consequence, as to this Article, to shew upon what Grounds he proceeds.* But some Men will say, How are the Dead raised up, and with what Body do they come? First, he shews, that the *seminal Parts of Plants are wonderfully improv'd by the ordinary Providence of God, in the Manner of their Vegetation.* Answ. I do not perfectly understand, what it is for the *seminal Parts of Plants to be wonderfully improved, by the ordinary Providence of God, in the Manner of their Vegetation;*

Or

Or else, perhaps, I should better see how this here tends to the Proof of the Resurrection of the same Body, in your Lordship's Sense.

* P. 40. IT continues, * They sow bare Grain of Wheat, or of soinc other Grain, but God giveth it a Body,

as it hath pleased Him, and to every Seed his own Body. Here, says your Lordship, is an Identity of the material Substance supposed. It may be so. But to me a Diversity of the material Substance, i. e. of the component Particles, is here supposed, or in direct Words said. For the Words of St. Paul,

† V. 37. taken all together, run thus, † That which thou sowest, thou sowest not that Body which shall be, but bare Grain, and so on, as your Lordship has set down the Remainder of them. From which Words of St. Paul, the natural Argument seems to me to stand thus: If the Body that is put in the Earth in sowing, is not that Body which shall be, then the Body that is put in the Grave, is not that, i. e. the same Body that shall be.

BUT your Lordship proves it to be the same Body, by these three Greek Words of the Text, τὸ ἑαυτοῦ σῶμα, which † P. 40. your Lordship interprets thus, † That proper Body which belongs to it. Answer. Indeed by those Greek

Words τὸ ἑαυτοῦ σῶμα, whether our Translators have rightly rendered them his own Body, or your Lordship more rightly, that proper Body which belongs to it, I formerly understood no more but this, that in the Production of Wheat, and other Grain from Seed, God continued every Species distinct, so that from Grains of Wheat sown, Root, Stalk, Blade, Ear and Grains of Wheat were produced, and not those of Barley; and so of the rest, which I took to be the Meaning, of to every Seed his own Body. No, says your Lordship, these Words prove, That to every Plant of Wheat, and to every Grain of Wheat produced in it, is given the proper Body that belongs to it, is the same Body with the Grain that was sown. Answer. This, I confess, I do not understand; because I do not understand how one individual Grain can be the same with twenty, fifty, or an hundred individual Grains; for such sometimes is the Increase.

BUT your Lordship proves it. For, says your || P. 40. Lordship, || Every Seed having that Body in little which is afterwards so much enlarged; and in Grain the Seed is corrupted before its Germination; but it hath its proper, organical Parts, which make it the same Body with that which it grows up to. For, altho' Grain be not divided into Lobes, as other Seeds are, yet it hath been found, by the most accurate Observations, that upon separating the Membranes, these seminal Parts are discerned in them; which afterwards grow up to that Body which we call Corn. In which Words I crave Leave to observe, that your Lordship supposes, that a Body may be enlarged, by the addition of an hundred, or a thousand times as much Bulk as its own Matter, and yet continue the same Body; which, I confess, I cannot understand.

BUT in the next Place, if that could be so, and that the Plant, in its full Growth at Harvest, increased by a Thousand, or a Million of times

times as much new Matter added to it, as it had, when it lay in little, concealed in the Grain that was sown, was the very same Body : yet I do not think, that your Lordship will say, that every minute, insensible, and inconceivably small Grain of the Hundred Grains, contained in that little, organized, seminal Plant, is every one of them the very same with that Grain, which contains that whole, little, seminal Plant, and all those invisible Grains in it: For then it will follow, that one Grain is the same with an Hundred, and an hundred, distinct Grains the same with one ; which I shall be able to assent to, when I can conceive, that all the Wheat in the World is but one Grain.

For I beseech you, my Lord, consider, what it is St. Paul here speaks of: It is plain he speaks of *that, which is sown and dies, i. e.* the Grain, that the Husbandman takes out of his Barn, to sow in his Field. And of this Grain, St. Paul says, that it is not that *Body that shall be*. These two, *viz.* *That which is sown*, and *That Body, that shall be*, are all the Bodies that St. Paul here speaks of, to represent the Agreement, or Difference, of Mens Bodies after the Resurrection, with those they had, before they died. Now, I crave Leave to ask your Lordship, which of these Two is that little, invisible, seminal Plant, which your Lordship here speaks of? Does your Lordship mean by it, the *Grain, that is sown?* But that is not what St. Paul speaks of; he could not mean this *embryonated*, little Plant; for he could not denote it by these Words, *that which thou sowest*, for that, he says, must die; but this little, *embryonated* Plant, contained in the Seed that is sown, dies not : Or does your Lordship mean by it, the *Body that shall be?* But neither by these Words, *the Body that shall be*, can St. Paul be supposed to denote this insensible, little, *embryonated* Plant; for that is already in Being, contained in the Seed that is sown ; and, therefore, could not be spoke of, under the Name of *the Body that shall be*. And, therefore, I confess, I cannot see of what use it is to your Lordship, to introduce, here, this third Body, which St. Paul mentions not ; and to make that the same, or not the same, with any other, when those, which St. Paul speaks of, are, as I humbly conceive, these two, visible, sensible Bodies, the Grain sown, and the Corn grown up to Ear ; with neither of which this insensible, *embryonated* Plant can be the same Body, unless an insensible Body can be the same Body with a sensible Body ; and a little Body can be the same Body with one ten Thousand, or an hundred Thousand times as big as itself. So that yet, I confess, I see not the *Resurrection of the same Body* proved, from these Words of St. Paul, to be an *Article of Faith*.

YOUR Lordship goes on: * *St. Paul indeed saith,*
That we sow not that Body that shall be ; but he * P. 41.
speaks not of the Identity, but the Perfection of it.

Here my Understanding fails me again : For I cannot understand St. Paul to say, That the same, identical, sensible Grain of Wheat, which was sown at Seed-time, is the very same, with every Grain of Wheat, in the Ear, at Harvest, that sprang from it : Yet so I must understand it, to make it prove, that the same, sensible Body, that is laid in the

Grave, shall be the very same with that, which shall be raised at the Resurrection. For I do not know of any seminal *Body in little*, contained in the dead Carcase of any Man, or Woman; which, as your Lordship says, in Seeds, having its proper, Organical Parts, shall afterwards be enlarged, and, at the Resurrection, grow up into the same Man. For I never thought of any Seed, or *seminal Parts*, either of Plant, or Animal, so wonderfully improved by the Providence of God, whereby the same Plant, or Animal, should beget itself; nor ever heard, that it was, by Divine Providence, designed to produce the same Individual, but for the producing of future and distinct Individuals, for the Continuation of the same Species.

YOUR Lordship's next Words are, * *And altho'*

* P. 41.

there be such a Difference from the Grain itself, when it comes up to be perfect Corn, with Root, Stalk, Blade and Ear, that it may be said, to outward Appearance, not to be the same Body; yet, with regard to the seminal and organical Parts, it is as much the same, as a Man, grown up, is the same with the Embryo in the Womb.

Answer. It does not appear, by any Thing I can find in the Text, That St. Paul here compared the *Body* produced, with the *seminal and organical Parts* contained in the *Grain*, it sprang from, but with the whole, sensible *Grain*, that was sown. Microscopes had not then discovered the little *Embryo* Plant in the *Seed*; and supposing it should have been revealed to St. Paul, (tho', in the Scripture, we find little Revelation of Natural Philosophy) yet an Argument, taken from a Thing perfectly unknown to the *Corinthians*, whom he writ to, could be of no Manner of Use to them, nor serve at all, either to instruct, or convince them. But granting that those, St. Paul writ to, knew it, as well as Mr. *Lewenhoek*; yet your Lordship thereby proves not the raising of the *same Body*: Your Lordship says, it is as much the *same* [I crave leave to add; *Body*] *as a Man grown up is the same* (*same* what, I beseech your Lordship?) *with the Embryo in the Womb.* For that the *same Body* of the *Embryo* in the *Womb*, and *Body* of the *Man* *grown up*, is the *same Body*, I think no one will say, unless he can persuade himself, that a *Body*, that is not the hundredth Part of another, is the *same* with that other; which, I think, no one will do, till having renounced this dangerous Way by Ideas, of Thinking and Reasoning, he has learnt to say, that a Part and the Whole are the *same*.

YOUR Lordship goes on, † *And altho' many Argu-*

† P. 41.

ments may be used to prove, that a Man is not the same; because *Life, which depends upon the Course of the Blood, and the Manner of Respiration, and Nutrition, is so different in both States; yet that Man would be thought ridiculous, that should seriously affirm, That it was not the same Man.*

And your Lordship says, *I grant that the Variation of great Parcels of Matter in Plants, alters not the Identity; and that the Organization of the Parts in one coherent Body, partaking of one common Life, makes the Identity of a Plant.* *Answer.* My Lord, I think the Question is not about the *same*

same Man, but the same Body: For tho' I do say,
 * (somewhat differently from what your Lordship sets down, as my Words, here) 'That that, which
 has such an Organization, as is fit to receive
 'and distribute Nourishment, so as to continue and frame the Wood,
 'Bark, and Leaves, &c. of a Plant, in which consists the vegetable
 'Life, continues to be the same Plant, as long as it partakes of the
 'same Life, tho' that Life be communicated to new Particles of Mat-
 'ter, vitally united to the living Plant:' Yet I do not remember,
 that I any where say, That a Plant, which was once no bigger than
 an Oaten Straw, and afterwards grows to be above a Fathom about,
 is the *same Body*, tho' it be still the *same Plant*.

THE well known Tree in *Epping Forest*, called the *King's Oak*, which, from not weighing an Ounce at first, grew to have many Tuns of Timber in it, was all along the same *Oak*, the very *same Plant*; but no body, I think, will say it was the *same Body*, when it weighed a Tun, as it was when it weighed but an Ounce; unless he has a Mind to signalize himself, by saying, That that is the *same Body*, which has a thousand Particles of different Matter in it, for one Particle that is the same; which is no better than to say, That a thousand different Particles are but one and the same Particle, and one and the same Particle is a thousand different Particles; a thousand times a greater Absurdity, than to say Half is the Whole, or the Whole is the same with the Half; which will be improved ten Thousand times, yet farther, if a Man shall say, (as your Lordship seems, to me, to argue here) That that great Oak is the very same Body with the Acorn, it sprang from, because there was, in that Acorn, an Oak in little, which was *afterwards* (as your Lordship expresses it) so much enlarged, as to make that mighty Tree: For this *Embryo*, if I may so call it, or Oak in little, being not the one hundredth, or, perhaps, the thousandth Part of the Acorn, and the Acorn being not the thousandth Part of the grown Oak, 'twill be very extraordinary to prove the Acorn and the grown Oak to be the *same Body*, by a way, wherein it cannot be pretended, that above one Particle of an hundred Thousand, or a Million, is the same in the one Body, that it was in the other. From which way of Reasoning, it will follow, that a Nurse and her fucking Child have the *same Body*; and be past doubt, that a Mother and her Infant have the *same Body*. But this is a way of *Certainty*, found out to establish the Articles of Faith, and to overturn the new *Method of Certainty*, that your Lordship says I have started, which is apt to leave Mens Minds more doubtful than before.

AND now I desire your Lordship to consider, of what Use it is to you, in the present Case, to quote out of my *Essay* these Words, 'That partaking of one common Life, makes the Identity of a Plant; since the Question is not about the *Identity of a Plant*, but about the *Identity of a Body*: It being a very different thing to be the *same Plant*, and to be the *same Body*. For that, which makes the *same Plant*, does not make the *same Body*; the one being the partaking in the same, continued, vegetable Life, the other the consist-

ing of the same, numerical Particles of Matter. And, therefore, your Lordship's Inference from my Words above quoted, in these which you subjoin, * seems to me a very strange one, *viz.* So that, in *Things capable of*

any sort of Life, the Identity is consistent with a continued Succession of Parts; and so the Wheat, grown up, is the same Body with the Grain that was sown. For I believe, if my Words, from which you infer, *And so the Wheat, grown up, is the same Body with the Grain that was sown,* were put into a Syllogism, this would hardly be brought to be the Conclusion.

BUT your Lordship goes on, with Consequence upon Consequence, tho' I have not Eyes acute enough, every where to see the Connexion, until you bring it to the Resurrection of the same Body. The

* P. 42. Connexion of your Lordship's Words * is as followeth: *And thus the Alteration of the Parts of the Body, at the Resurrection, is consistent with its Identity,*

if its Organization and Life be the same; and this is a real Identity of the Body, which depends not upon Consciousness: From whence it follows, that to make the same Body, no more is required, but restoring Life to the organized Parts of it. If the Question were about raising the same Plant, I do not say, but there might be some Appearance, for making such an Inference from my Words as this: *Whence it follows, that to make the same Plant, no more is required, but to restore Life to the organized Parts of it.* But this Deduction, wherein, from those Words of mine, that speak only of the Identity of a Plant, your Lordship infers, there is no more required to make the same Body, than to make the same Plant; being too subtle for me, I leave to my Reader to find out.

YOUR Lordship goes on, and says, † That I
† P. 42. grant likewise, 'That the Identity of the same Man
' consists in a Participation of the same, continued
' Life, by constantly fleeting Particles of Matter, in Succession, vi-
' tally united to the same organized Body.' Answ. I speak, in these
Words, of the Identity of the same Man; and your Lordship thence roundly concludes; so that there is no Difficulty of the Sameness of
the Body. But your Lordship knows, that I do not take these two
Sounds, *Man* and *Body*, to stand for the same Thing; nor the Identity
of the *Man* to be the same, with the Identity of the *Body*.

BUT let us read out your Lordship's Words: ‡
‡ P. 42. So that there is no Difficulty, as to the Sameness of
the Body, if Life were continued; and if, by Divine
Power, Life be restored to that material Substance, which was before
united, by a Re-union of the Soul to it, there is no Reason to deny the
Identity of the Body: Not from the Consciousness of the Soul, but from
that Life, which is the Result of the Union of the Soul and Body.

IF I understand your Lordship right, you, in these Words, from the Passages above quoted out of my Book, argue, that, from those Words of mine, it will follow, That it is, or may be, the same Body, that is raised at the Resurrection. If so, my Lord, your Lordship has then

then proved, That my Book is not inconsistent with, but conformable to this Article of the *Resurrection of the same Body*, which your Lordship contends for, and will have to be an Article of Faith: For tho' I do, by no Means, deny that the *same Bodies* shall be raised at the Last Day, yet I see nothing your Lordship has said to prove it to be an Article of Faith.

BUT your Lordship goes on, with your Proofs, and says; *§ But St. Paul still supposes, that it must be that material Substance, to which the Soul was before united. For, saith he, it is sown in Corruption, it is raised in Incorruption: It is sown in Dishonour, it is raised in Glory: It is sown in Weakness, it is raised in Power: It is sown a Natural Body, it is raised a Spiritual Body. Can such a material Substance, which was never united to the Body, be said to be sown in Corruption, and Weakness, and Dishonour? Either, therefore, he must speak of the same Body, or his Meaning cannot be comprehended.* I answer, *Can such a material Substance, which was never laid in the Grave, be said to be sown, &c? For your Lordship says, * You do not mean the same individual Particles, which were united at the Point of Death, shall be raised at the Last Day;* and no other Particles are laid in the Grave, but such as are united at the Point of Death; either, therefore, your Lordship must speak of another Body, different from that, which was sown, which shall be raised; or else your Meaning, I think, cannot be comprehended.

BUT, whatever be your Meaning, your Lordship proves it to be St. Paul's Meaning, That the *same Body* shall be raised, which was sown, in these following Words; *† For what does all this relate to a conscious Principle? Answ. The Scripture being express, That the same Person should be raised, and appear before the Judgment-Seat of Christ, that every one may receive, according to what he had done in his Body; it was very well suited to common Apprehensions (which refined not, about Particles, that had been vitally united to the Soul!) to speak of the Body, which each one was to have, after the Resurrection, as he would be apt to speak of it, himself. For it being his Body, both before and after the Resurrection, every one ordinarily speaks of his Body, as the same, tho', in a strict and philosophical Sense, as your Lordship speaks, it be not the very same. Thus it is no Impropriety of Speech to say, this Body of mine, which was formerly strong and plump, is now weak and wasted; tho' in such a Sense as you are speaking here, it be not the same Body. Revelation declares nothing, any where, concerning the *same Body*, in your Lordship's Sense of the *same Body*, which appears not to have been then thought of. The Apostle directly proposes nothing for, or against, the *same Body*, as necessary to be believed: That which he is plain and direct in, is his opposing and condemning such curious Questions about the Body, which could serve only to perplex, not to confirm, what was material and necessary for them to believe, viz. a Day of Judgment,*

and

and Retribution to Men in a Future State; and, therefore, 'tis no Wonder that, mentioning their Bodies, he should use a Way of Speaking, suited to vulgar Notions, from which it would be hard positively to conclude any thing, for the determining of this Question, (especially against Expressions, in the same Discourse, that plainly incline to the other Side) in a Matter which, as it appears, the Apostle thought not necessary to determine; and the Spirit of God thought not fit to gratify any one's Curiosity in.

BUT your Lordship says, † *The Apostle speaks plainly of that Body, which was once quickned, and afterwards falls to Corruption, and is to be restored with more noble Qualities.* I wish your Lordship had quoted the Words of St. Paul, wherein he speaks plainly of that numerical Body, *that was once quickned;* they would presently decide this Question. But your Lordship proves it, by these following Words of St. Paul; *For this Corruption must put on Incorruption, and this Mortal must put on Immortality;* to which your Lordship adds, *That you do not see how he could more expressly affirm the Identity of this corruptible Body, with that after the Resurrection.* How expressly it is affirmed by the Apostle, shall be considered by and by. In the mean time, it is past doubt, that your Lordship best knows, what you do, or *do not see:* But this I will be bold to say, that if St. Paul had any where, in this Chapter, (where there are so many Occasions for it, if it had been necessary to have been believed) but said in express Words, that the *same Bodies* should be raised; every one else, who thinks of it, will *see,* he had *more expressly affirmed the Identity of the Bodies,* which Men now have, with those they shall have after the Resurrection.

THE Remainder of your Lordship's Period,* is;
 * P. 44. *And that without any Respect to the Principle of Self-consciousness.* Answ. These Words, I doubt not, have some Meaning, but, I must own, I know not what; either, towards the Proof of the Resurrection of the *same Body,* or to shew, that any thing I have said, concerning *Self-consciousness,* is inconsistent: For I do not remember, that I have any where said, *That the Identity of Body consisted in Self-consciousness.*

FROM your preceeding Words, your Lordship
 † P. 44. concludes thus. † *And so, if the Scripture be the sole Foundation of our Faith, this is an Article of it.* My Lord, to make the Conclusion unquestionable, I humbly conceive, the Words must run thus; and so, if the Scripture, and your Lordship's Interpretation of it, *be the sole Foundation of our Faith;* the Resurrection of the *same Body is an Article of it.* For, with Submission, your Lordship has neither produced express Words of Scripture for it, nor so proved that to be the Meaning of any of those Words of Scripture, which you have produced for it, that a Man, who reads, and sincerely endeavours, to understand the Scripture, cannot but find himself obliged to believe, as expressly, that *the same Bodies of the Dead,* in your Lordship's Sense, shall be raised, as that *the Dead shall be raised.* And I crave Leave to give your Lordship this

this one Reason for it. He who reads, with Attention, this Discourse of St. Paul, || where he discourses of the Resurrection, will see, that he plainly distinguishes between the *Dead*, that shall be raised, and *the Bodies of the Dead*. For it is νεκροί, πάντες, ὁι, are the Nominative Cases to * ἐγειρόμενοι, ζωοποιούσονται, εγείθησονται, all along, and not σώματα, *Bodies*; which one may, with Reason, think would, somewhere or other, have been expressed, if all this had been said, to propose it, as an Article of Faith, that the very same *Bodies* should be raised. The same manner of Speaking, the Spirit of God observes, all thro' the New Testament, where it is said, * raise the *Dead*, quicken, or make alive, the *Dead*, the Resurrection of the *Dead*. Nay, these very Words of our Saviour, † urged by your Lordship for the Resurrection of the *same Body*, run thus: Πάντες ὁι ἐν τοῖς μνήμεσις ἀπέστολαι τῆς φωνῆς ἀυτῆς, καὶ ἐπιφένεντοι τοις τὰ ἀγαθὰ ποιήσαντες εἰς ἀνάστασιν ζῶντες, οἱ δὲ τὰ φαῦλα πράξαντες, εἰς ἀνάστασιν νεκροὶ. Would a well-meaning Searcher of the Scriptures be apt to think, that if the Thing, here intended by our Saviour, were to teach, and propose it as an Article of Faith, necessary to be believed by every one, that the very *same Bodies of the Dead* should be raised; would not, I say, any one be apt to think, that, if our Saviour meant so, the Words should rather have been πάντα τὰ σώματα ὡς ἐν τοῖς μνήμεσις, i. e. all the *Bodies*, that are in the *Graves*, rather than *all, who are in the Graves*; which must denote Persons, and not precisely *Bodies*?

ANOTHER Evidence, that St. Paul makes a Distinction between the *Dead*, and the *Bodies of the Dead*, so that the *Dead* cannot be taken in this, 1. Cor. xv. to stand precisely for the *Bodies of the Dead*, are these Words of the Apostle; || *But some Men will say, How are the Dead raised? And, with what Bodies do they come?* Which Words, *Dead*, and, *They*, if supposed to stand precisely for the *Bodies of the Dead*, the Question will run thus: *How are the dead Bodies raised? And, with what Bodies do the dead Bodies come?* which seems to have no very agreeable Sense.

THIS, therefore, being so, that the Spirit of God keeps so expressly to this Phrase, or Form of speaking, in the New Testament, of raising, quickning, rising, Resurrection, &c. of the *Dead*, where the Resurrection at the Last Day is spoken of; and that the *Body* is not mentioned, but in answer to this Question, *With what Bodies shall those Dead, who are raised, come?* So that, by the *Dead*, cannot precisely be meant, *the dead Bodies*; I do not see but a good Christian, who reads the Scripture, with an Intention to believe all, that is there revealed to him, concerning the Resurrection, may acquit himself of his Duty therein, without entering into the Enquiry, whether

the

the Dead shall have the *very same Bodies*, or no ; which Sort of Enquiry, the Apostle, by the Appellation he bestows here, on him that makes it, seems not much to encourage. Nor, if he shall think himself bound to determine, concerning the Identity of the Bodies of the Dead, raised at the Last Day ; will he, by the Remainder of St. Paul's Answer, find the Determination of the Apostle, to be much in favour of the *very same Body*; unless the being told, that the Body, fown, *is not that Body, that shall be*; that the Body raised is as different, from that which was laid down, as the *Flesh of Man* is from the *Flesh of Beasts, Fishes, and Birds*, or as the *Sun, Moon, and Stars*, are different one from another; or as different as a corruptible, weak, natural, mortal Body, is from an incorruptible, powerful, spiritual, immortal Body ; and lastly, as different as a Body, that is *Flesh* and *Blood*, is from a Body that is not *Flesh* and *Blood*:

For *Flesh and Blood cannot*, says St. Paul, in this
 * 1 Cor. xv. 50. very Place, * *inherit the Kingdom of God*; unless, I say, all this, which is contained in St. Paul's Words, can be supposed to be the Way to deliver this, as an Article of Faith, which is required to be believed by every one, viz. That the *Dead should be raised, with the very same Bodies that they had before, in this Life*; which Article, proposed in these, or the like plain and express Words, could have left no room for Doubt, in the meanest Capacities ; nor for Contest, in the most perverse Minds.

YOUR Lordship adds, in the next Words ; † *And so it hath been always understood, by the Christian Church*, viz. *That the Resurrection of the same Body*, in your Lordship's Sense of the *same Body*, *is an Article of Faith*. *Answer.* What the *Christian Churches always understand*, is beyond my Knowledge. But for those who, coming short of your Lordship's great Learning, cannot gather their Articles of Faith, from the Understanding of all the whole Christian Church, ever since the preaching of the Goipel, (who make the far greater Part of Christians, I think I may say, nine hundred ninety and nine of a thousand) but are forced to have recourse to the Scripture, to find them there ; I do not see, that they will easily find there, this proposed as an Article of Faith, that there shall be a *Resurrection of the same Body*; but that there shall be a *Resurrection of the Dead*, without explicitly determining, That they shall be raised with Bodies, made up wholly of the same Particles, which were once vitally united to their Souls, in their former Life ; without the Mixture of any one other Particle of Matter ; which is that, which your Lordship means, by the *same Body*.

BUT, supposing your Lordship to have demonstrated this to be an Article of Faith, tho' I crave leave to own, that I do not see, that all that your Lordship has said, here, makes it so much as probable ;

What is all this to me ? Yes, says your Lordship, in
 † P. 44. the following Words, † *My Idea of personal Identity is inconsistent with it; for it makes the same Body, which was here united to the Soul, not to be necessary to the Doctrine*

trine of the Resurrection. But any material Substance, united to the same Principle of Consciousness, makes the same Body.

THIS is an Argument of your Lordship's, which I am oblig'd to answer to. But is it not fit, I should first understand it, before I answer it? Now, here I do not well know, what it is to make a Thing not to be necessary to the Doctrine of the Resurrection. But to help myself out, the best I can, with a Guess, I will conjecture (which, in disputing with learned Men, is not very safe) your Lordship's Meaning is, That my Idea of personal Identity makes it not necessary, that, for the raising the same Person, the Body should be the same.

YOUR Lordship's next Word is, *But*; to which I am ready to reply, *But what?* What does my Idea of personal Identity do? For something of that Kind the adversative Particle, *But*, should, in the ordinary Construction of our Language, introduce, to make the Proposition clear and intelligible: But here is no such Thing; *But* is one of your Lordship's privileged Particles, which I must not meddle with, for fear your Lordship complain of me again, as so severe a Critic, that for the least Ambiguity in any Particle, fill up Pages in my Answer, to make my Book look considerable, for the Bulk of it. But since this Proposition here, *my Idea of personal Identity makes the same Body, which was here united to the Soul, not necessary to the Doctrine of the Resurrection:* But, any material Substance being united to the same Principle of Consciousness, makes the same Body, is brought to prove my Idea of personal Identity inconsistent with the Article of the Resurrection: I must make it out, in some direct Sense, or other, that I may see, whether it be both true and conclusive. I therefore venture to read it thus: *My Idea of personal Identity makes the same Body, which was here united to the Soul, not to be necessary at the Resurrection; but allows, That any material Substance, being united to the same Principle of Consciousness, makes the same Body: Ergo, my Idea of personal Identity, is inconsistent with the Article of the Resurrection of the same Body.*

If this be your Lordship's Sense, in this Passage, as I here have guessed it to be; or else I know not what it is: I answer,

1. THAT my Idea of personal Identity does not allow, that any material Substance, being united to the same Principle of Consciousness, makes the same Body. I say no such thing in my Book, nor any thing, from whence it may be inferr'd; and your Lordship would have done me a Favour, to have set down the Words, where I say so, or those from which you infer so, and shew'd how it follows from any thing I have said.

2. GRANTING, that it were a Consequence from my Idea of personal Identity, that any material Substance, being united to the same Principle of Consciousness, makes the same Body; this would not prove, that my Idea of personal Identity was inconsistent with this Proposition, *That the same Body shall be raised;* but, on the contrary, affirms it: Since if I affirm, as I do, That the same Persons shall be raised, and it be a Consequence of my Idea of personal Identity,

tity, that any material Substance, being united to the same Principle of Consciousness, makes the same Body; it follows, that, if the same Person be raised, the same Body must be raised; and so I have herein not only said nothing, inconsistent with the Resurrection of the same Body, but have said more for it, than your Lordship. For there can be nothing plainer, than that, in the Scripture, it is revealed, That the same Persons shall be raised, and appear before the Judgment-Seat of Christ, to answer for what they have done in their Bodies. If, therefore, whatever Matter be joined to the same Principle of Consciousness, makes the same Body; it is Demonstration, that if the same Persons are raised, they have the same Bodies.

How, then, your Lordship makes this an Inconsistency with the Resurrection, is beyond my Conception. Yes, says

* P. 44. your Lordship, * It is inconsistent with it; for it makes the same Body, which was here united to the Soul, not to be necessary.

3. I ANSWER, therefore, Thirdly, That this is the first Time, I ever learnt, That not *necessary*, was the same with, *inconsistent*. I say, that a Body, made up of the same numerical Parts of Matter, is not necessary to the making of the same Person; from whence it will, indeed, follow, that, to the Resurrection of the same Person, the same numerical Particles of Matter are not required. What does your Lordship infer from hence? To wit, this: Therefore, he, who thinks that the same Particles of Matter are not necessary to the making of the same Person, cannot believe, that the same Persons shall be raised with Bodies, made of the very same Particles of Matter, if God should reveal, that it shall be so, *viz.* That the same Persons shall be raised, with the same Bodies, they had before: Which is all one as to say, That he, who, thought the blowing of Rams Horns was not necessary, in itself, to the falling down of the Walls of Jericho, could not believe, that they should fall, upon the Blowing of Rams Horns, when God had declared it should be so.

YOUR Lordship says, *My Idea of Personal Identity is inconsistent with the Article of the Resurrection;* The Reason you ground it on, is this, because it makes not the same Body *necessary*, to the making the same Person. Let us grant your Lordship's Consequence to be good, what will follow from it? No less than this, That your Lordship's Notion (for I dare not say your Lordship has any so dangerous Things, as Ideas) of personal Identity, is inconsistent with the Article of the Resurrection. The Demonstration of it is thus; your Lord-

† P. 34, 35. ship says, † It is not necessary that the Body, to be raised at the Last Day, should consist of the same

Particles of Matter, which were united at the Point of Death; for there must be a great Alteration in them, in a long Disease; as if a fat Man falls into a Consumption: You do not say, the same Particles, which the Sinner had, at the very time of Commission of his Sins; for then a long Sinner must have a vast Body, consider-

dering the continual spending of Particles by Perspiration. And again, here your Lordship says, || You || P. 44.
allow the Notion of personal Identity to belong to the same Man, under several Changes of Matter. From which Words it is evident, That your Lordship supposes a Person, in this World, may be continued and preserved the same, in a Body, not consisting of the same individual Particles of Matter; and hence it demonstratively follows, That, let your Lordship's *Notion of personal Identity* be what it will, it makes *the same Body not to be necessary to the same Person*; and, therefore, it is, by your Lordship's Rule, *inconsistent with the Article of the Resurrection*. When your Lordship shall think fit to clear your own *Notion of personal Identity*, from this *Inconsistency* with the Article of the Resurrection, I do not doubt, but my *Idea of personal Identity* will be thereby cleared too. Till then, all *Inconsistency* with that Article, which your Lordship has here charged on mine, will unavoidably fall upon your Lordship's too.

BUT, for the clearing of both, give me leave to say, my Lord, That whatsoever is *not necessary*, does not thereby become *inconsistent*. It is *not necessary* to the same *Person*, that his Body should always consist of the same numerical Particles; this is Demonstration, because the Particles of the Bodies of the same Persons, in this Life, change every Moment, and your Lordship cannot deny it; and yet this makes it *not inconsistent* with God's preserving, if he thinks fit, to the same Persons, Bodies consisting of the same numerical Particles always, from the Resurrection to Eternity. And so likewise, tho' I say any thing, that supposes it *not necessary*, that the same numerical Particles, which were vitally united to the Soul in this Life, should be re-united to it, at the Resurrection, and constitute the Body it shall then have; yet it is *not inconsistent* with this, that God may, if He pleases, give to every one a Body, consisting only of such Particles, as were before vitally united to his Soul. And thus, I think, I have cleared my Book from all that *Inconsistency*, which your Lordship charges on it, and would persuade the World it has, with the *Article of the Resurrection of the Dead*.

ONLY before I leave it, I will set down the Remainder of what your Lordship says, upon this Head, That, tho' I see not the Coherence, or Tendency of it, nor the Force of any Argument in it, against me; yet that nothing may be omitted, that your Lordship has thought fit to entertain your Reader with, on this new Point, nor any one have Reason to suspect, that I have passed by any Word of your Lordship's, (on this now first introduced Subject) wherein he might find, your Lordship had proved what you had promised in your Title-Page. Your remaining Words, are these : *

The Dispute is not how far personal Identity in itself may consist, in the very same material Substance; for we allow the Notion of personal Identity to belong to the same Man, under several Changes of Matter; but, whe ver it doth not depend upon a vital Union between the Soul and Body, and the Life,

* P. 44.

Life, which is consequent upon it: And, therefore, in the Resurrection, the same material Substance must be re-united, or else it cannot be called a Resurrection, but a Renovation; i. e. it may be a new Life, but not a Raising the Body from the Dead. I confess, I do not see how what is here ushered in, by the Words, and therefore, is a Consequence from the preceding Words; but as to the Propriety of the Name, I think it will not be much question'd, that, if the same Man rise, who was dead, it may very properly be called the *Resurrection of the Dead*; which is the Language of the Scripture.

I MUST not part with this Article of the Resurrection, without returning my Thanks to your Lordship, for making me * take Notice of a Fault, in my *Essay*.

* P. 62. When I writ that Book, I took it for granted, as I doubt not, but many others have done, that the Scripture had mentioned, in express Terms, *the Resurrection of the Body*: But, upon the Occasion your Lordship has given me, in your last Letter, to look a little more narrowly into what Revelation has declared, concerning the *Resurrection*, and finding not such express Words in the Scripture, as that the Body *shall rise*, or *be raised*, or the *Resurrection of the Body*; I shall in the next Edition of it, ‡ Essay, B. IV. change these Words of my Book, ‡ *The dead Bodies of Men shall rise*, into these of the Scripture, *The Dead shall rise*. Not that I question, that the Dead shall be raised with Bodies: But, in Matters of Revelation, I think it not only safest, but our Duty, as far as any one delivers it for Revelation, to keep close to the Words of the Scripture; unless he will assume to himself the Authority of one inspired, or make himself wiser than the Holy Spirit himself. If I had spoke of the Resurrection, in

|| P. 63. precisely Scripture Terms, I had avoided giving your Lordship the Occasion, of making || here such a verbal Reflexion on my Words; *What not, if there be an Idea of Identity as to the Body.*

C H A P. XXVIII.

Of Other RELATIONS.

§. 1. **B**E SIDES the before-mentioned
Occasions of Time, Place, and Ca-
sualty of comparing, or referring Things one to
another, there are, as I have said, infinite others, some whereof
I shall mention.

First, THE first I shall name, is some one simple *Idea*; which being capable of Parts, or Degrees, affords an Occasion of comparing the Subjects, wherein it is to one another, in respect of that simple *Idea*, *v. g. whiter, sweeter, bigger, equal, more, &c.* These Relations, depending on the Equality and Excess of the same simple *Idea*, in several Subjects, may be called, if one will, *Proportional*; and that these are only conversant about those simple *Ideas*, received from Sensation, or Reflexion, is so evident, that nothing need be said to evince it.

§. 2. *Secondly, ANOTHER Occasion of compar- ing Things together, or considering one Thing,*
Natural.
so as to include in that Consideration some other Thing, is the Circumstances of their Origin, or Beginning; which being not afterwards to be altered, make the Relations depending thereon as lasting as the Subjects, to which they belong; *v. g. Father and Son, Brothers, Cousin-Germans, &c.* which have their Relations by one Community of Blood, wherein they partake in several Degrees; *Countrymen, i. e. those who were born in the same Country, or Tract of Ground;* and these I call *Natural Relations.* Wherein we may observe, that Mankind have fitted their Notions and Words to the Use of common Life, and not to the Truth and Extent of Things. For it is certain, that in reality the Relation is the same betwixt the Begetter and the Begotten, in the several Races of other Animals, as well as Men; but yet it is seldom said, this Bull is the Grandfather of such a Calf, or that two Pigeons are Cousin-Germans. It is very convenient, that
by

by distinct Names these Relations should be observ'd, and mark'd out in Mankind ; there being occasion, both in Laws, and other Communications one with another, to mention and take Notice of Men under these Relations : From whence also arise the Obligations of several Duties amongst Men: Whereas in Brutes, Men having very little, or no Cause to mind these Relations, they have not thought fit to give them distinct and peculiar Names. This, by the way, may give us some Light into the different State and Growth of Languages ; which being suited only to the Convenience of Communication, are proportion'd to the Notions Men have, and the Commerce of Thoughts familiar amongst them ; and not to the Reality, or Extent of Things, nor to the various Respects might be found among them, nor the different abstract Considerations might be framed about them. Where they had no philosophical Notions, there they had no Terms to express them : And it is no wonder Men should have framed no Names for those Things they found no occasion to discourse of. From whence it is easy to imagine, why, as in some Countries, they may not have so much as the Name for a Horse ; and in others, where they are more careful of the Pedigrees of their Horses than of their own, that there they may have not only Names for particular Horses, but also of their several Relations of Kindred one to another.

Instituted. §. 3. *Thirdly,* SOMETIMES the Foundation of considering Things, with reference to one another, is some Act whereby any one comes by a moral Right, Power, or Obligation to do something. Thus a *General* is one that hath Power to command an Army ; and an Army under a General is a Collection of armed Men, obliged to obey one Man. A *Citizen*, or *Burgher*, is one who has a Right to certain Privileges in this, or that Place. All this sort depending upon Mens Wills, or Agreement in Society, I call *Instituted*, or *Voluntary*; and may be distinguish'd from the natural, in that they are most, if not all of them, some way or other alterable, and separable from the Persons, to whom they have sometimes belonged, tho' neither of the Substances, so related, be destroy'd. Now, tho' these are all reciprocal, as well as the

the rest, and contain in them a reference of two Things one to the other; yet, because one of the two Things often wants a relative Name, importing that reference, Men usually take no notice of it, and the Relation is commonly overlook'd: *V.g.* A *Patron* and *Client* are easily allow'd to be Relations; but a *Constable*, or *Dictator*, are not so readily, at first hearing, consider'd as such; because there is no peculiar Name for those who are under the Command of a Dictator, or Constable, expressing a relation to either of them; tho' it be certain that either of them hath a certain Power over some others, and so is so far related to them, as well as a Patron is to his Client, or General to his Army.

§. 4. *Fourthly*, THERE is another sort of relation, which is, the Conformity, or Disagreement, *Moral.*
 Mens voluntary Actions have to a Rule, to which they are referr'd, and by which they are judg'd of; which, I think, may be called *Moral Relation*, as being that, which denominates our moral Actions, and deserves well to be examined; there being no Part of Knowledge, wherein we should be more careful to get determin'd *Ideas*, and avoid, as much as may be, Obscurity and Confusion. Human Actions, when with their various Ends, Objects, Manners, and Circumstances, they are framed into distinct, complex *Ideas*, are, as has been shewn, so many *mix'd Modes*, a great Part whereof have Names annex'd to them. Thus, supposing Gratitude to be a Readiness to acknowledge and return Kindness receiv'd, Polygamy to be the having more Wives than one at once; when we frame these Notions thus in our Minds, we have there so many determined *Ideas* of mix'd Modes: But this is not all that concerns our Actions; it is not enough to have determin'd *Ideas* of them, and to know what Names belong to such and such Combinations of *Ideas*. We have a farther and greater Concernment, and that is, to know whether such Actions, so made up, are morally good, or bad.

§. 5. Good and Evil, as hath been shewn, *Moral Good*
B. II. Ch. 20. §. 2. and Ch. 21. §. 42. are no- *and Evil.*
thing but Pleasure, or Pain, or that which occa-
sions, or procures Pleasure, or Pain to us. Moral Good and Evil,
then,

then, is only the Conformity, or Disagreement of our voluntary Actions, to some Law, whereby Good, or Evil, is drawn on us, by the Will and Power of the Law-maker ; which Good and Evil, Pleasure, or Pain, attending our Observance, or Breach of the Law, by the Decree of the Law-maker, is that we call Reward and Punishment.

Moral Rules. §. 6. Of these moral Rules, or Laws, to which

Men generally refer, and by which they judge, of the Rectitude, or Pravity of their Actions, there seem to me to be three Sorts, with their three different Enforcements, or Rewards and Punishments. For since it would be utterly in vain to suppose a Rule set to the free Actions of Man, without annexing to it some Enforcement of Good and Evil to determine his Will, we must, wherever we suppose a Law, suppose also some Reward, or Punishment, annex'd to that Law. It would be in vain for one intelligent Being to set a Rule to the Actions of another, if he had it not in his Power to reward the Compliance with, and punish Deviation from his Rule, by some Good and Evil, that is not the natural Product and Consequence of the Action itself : For that being a natural Convenience, or Inconvenience, would operate of itself, without a Law. This, if I mistake not, is the true Nature of all Law, properly so called.

Laws. §. 7. THE Laws, that Men generally refer

their Actions to, to judge of their Rectitude, or Obliquity, seem to me to be these three; 1. The Divine Law. 2. The Civil Law. 3. The Law of Opinion, or Reputation, if I may so call it. By the Relation they bear to the first of these, Men judge whether their Actions are Sins, or Duties ; by the second, whether they be criminal, or innocent; and by the third, whether they be Virtues, or Vices.

Divine Law, the Measure of Sin and Duty. §. 8. First, THE Divine Law, whereby I mean that Law, which God has set to the Actions of Men, whether promulgated to them by the Light of Nature, or the Voice of Revelation. That God has given a Rule, whereby Men should govern themselves, I think there is no body so brutish as to deny. He has a Right to do it, we are His Creatures : He has Goodness and Wisdom to direct

direct our Actions to that which is best ; and He has a Power to enforce it by Rewards and Punishments, of infinite Weight and Duration, in another Life ; for no body can take us out of His Hands. This is the only true Touchstone of *moral Rectitude*, and by comparing them to this Law, it is, That Men judge of the most considerable *moral Good*, or *Evil*, of their Actions ; that is, whether as *Duties*, or *Sins*, they are like to procure them Happiness, or Misery, from the Hands of the ALMIGHTY.

§. 9. Secondly, THE *Civil Law*, the Rule set by the Commonwealth to the Actions of those who belong to it, is another Rule, to which Men refer their Actions, to judge whether they be *criminal*, or no. This Law no body overlooks ; the Rewards and Punishments, that enforce it, being ready at hand, and suitable to the Power that makes it ; which is the Force of the Commonwealth, engaged to protect the Lives, Liberties, and Possessions of those who live according to its Laws, and has Power to take away Life, Liberty, or Goods, from him who disobeys ; which is the Punishment of Offences committed against this Law.

§. 10. Thirdly, THE *Law of Opinion, or Reputation*. Virtue and Vice are Names pretended, and supposed every where, to stand for Actions, in their own Nature right, or wrong ; and, as far as they really are so applied, they so far are co-incident with the *Divine Law* above mentioned. But yet, whatever is pretended, this is visible, that these Names, *Virtue*, and *Vice*, in the particular Instances of their Application, thro' the several Nations and Societies of Men in the World, are constantly attributed only to such Actions, as in each Country and Society are in Reputation, or Discredit. Nor is it to be thought strange, that Men every where should give the Name of *Virtue* to those Actions, which, amongst them, are judged Praise-worthy ; and call that *Vice*, which they account blameable : Since otherwise, they would condemn themselves, if they should think any Thing *right*, to which they allowed not Commendation ; any Thing *wrong*, which they let pass without Blame. Thus the Measure of what is every where called and esteemed *Virtue* and *Vice*, is

*Civil Law, the
Measure of
Crimes and In-
nocence.*

*Philosophical
Law, the Mea-
sure of Virtue
and Vice.*

this Approbation, or Dislike, Praise, or Blame, which, by a secret and tacit Consent, establishes itself in the several Societies, Tribes, and Clubs of Men in the World; whereby several Actions come to find Credit, or Disgrace, amongst them, according to the Judgment, Maxims, or Fashions of that Place. For tho' Men uniting into politic Societies have resign'd up to the Public the disposing of all their Force, so that they cannot employ it against any Fellow-Citizens, any farther than the Law of the Country directs; yet they retain still the Power of thinking well, or ill, approving, or disapproving, of the Actions of those whom they live amongst, and converse with; and, by this Approbation and Dislike, they establish amongst themselves what they will call *Virtue* and *Vice*.

§. II. THAT this is the common *Measure of Virtue and Vice*, will appear to any one, who considers, that tho' that passes for *Vice* in one Country, which is counted a *Virtue*, or at least not *Vice* in another; yet every where *Virtue* and Praise, *Vice* and Blame, go together. *Virtue* is every where that which is thought Praise-worthy; and nothing else but that, which has the Allowance of public Esteem, is called *Virtue**. *Virtue* and
Praise

* OUR Author, in his Preface to the fourth Edition, taking Notice how apt Men have been to mistake him, added what here follows. ' Of this the Ingenious Author of the *Discourse concerning the Nature of Man*, has given me a late Instance, to mention no other.' For the Civility of his Expressions, and the Candor that belongs to his Order, forbid me to think, that he would have closed his Preface with an Insinuation, as if in what I had said, Book II. Chap. 28. concerning the third Rule, which Men refer their Actions to, I went about to make *Virtue Vice*, and *Vice Virtue*, unless he had mistaken my Meaning; which he could not have done, if he had but given himself the Trouble to consider, what the Argument was I was then upon, and what was the chief Design of that Chapter, plainly enough set down in the fourth Section, and those following. For I was there, not laying down moral Rules, but shewing the Original and Nature of moral *Ideas*, and enumerating the Rules Men make use of in moral Relations, whether those Rules were true, or false: And, pursuant thereto, I tell what has every where that Denomination, which, in the Language of that Place, answers to *Virtue* and *Vice* in our's, which alters not the Nature of Things, tho' Men

Praise are so united, that they are call'd often by the same Name. *Sunt sua premia Laudi*, says *Virgil*; and so *Cicero*, *Nihil habet natura præstantius, quam Honestatem, quam Laudem, quam Dignitatem, quam Decus*; which, he tells you, are all Names for the same Thing, *Tusc.* l. 2. This is the Language of the Heathen Philosophers, who well understood wherein the Notions of *Virtue* and *Vice* consisted. And tho', perhaps, by the different Temper, Education, Fashion, Maxims, or Interest of different Sorts of Men, it fell out, that what was thought Praise-worthy in one Place, escaped not Censure in another; and so in different Societies, *Virtues* and *Vices* were changed; yet, as to the main, they, for the most part, kept the same every where. For since nothing can be more natural, than to encourage with Esteem and Reputation that, wherein every one finds his Advantage; and to blame and discountenance the contrary; 'tis no wonder, that Esteem and Discredit, Virtue and Vice, should, in a great Measure, every where correspond with the unchangeable Rule of Right and Wrong, which the Law of God hath establish'd;

there

Men do generally judge of, and denominate their Actions according to the Esteem and Fashion of the Place, or Sect they are of.

If he had been at the Pains to reflect on what I had said, Book I. Chap. 3. §. 18. and in this present Chapter, §. 13, 14, 15. and 20. he would have known what I think of the eternal and unalterable Nature of Right and Wrong, and what I call *Virtue* and *Vice*: And, if he had observed, that in the Place he quotes, I only report, as Matter of Fact, what others call *Virtue* and *Vice*, he would not have found it liable to any great Exception. For, I think, I am not much out in saying, That one of the Rules, made use of in the World, for a Ground, or Measure of a moral Relation, is that Esteem and Reputation, which several Sorts of Actions find variously in the several Societies of Men, according to which they are called *Virtues*, or *Vices*: And whatever Authority the Learned Mr. *Lowde* places in his *old English Dictionary*, I dare say, it no where tells him, (if I should appeal to it) that the same Action is not in Credit, call'd and counted a *Virtue* in one Place, which, being in Disrepute, passes for, and under the Name of *Vice* in another. The taking Notice that Men bestow the Names of *Virtue* and *Vice* according to this Rule of Reputation, is all I have done, or can be laid to my Charge to have done, towards the making *Vice Virtue*, and *Virtue Vice*. But the good Man does well, and as becomes his Calling, to be watchful in such Points, and to take the Alarm, even at Expressions,

there being nothing that so directly and visibly secures and advances the general Good of Mankind in this World, as Obedience to the Laws He has set them; and nothing that breeds such Mischiefs and Confusion, as the Neglect of them. And therefore Men, without renouncing all Sense and Reason, and their own Interest, which they are so constantly true to, could not generally mistake, in placing their Commendation and Blame on that Side, that really deserved it not. Nay, even those Men, whose Practice was otherwise, failed not to give their Approbation right; few being depraved to that Degree, as not to condemn, at least in others, the Faults they themselves were guilty of: Whereby, even in the Corruption of Manners, the true Boundaries of the Law of Nature, which ought to be the Rule of Virtue and Vice, were pretty well preserved. So that even the Exhortations of inspired Teachers have not feared to appeal to common Repute: *Whatsoever is lovely, whatsoever is of good Report, if there be any Virtue, if there be any Praise,* &c. Phil. iv. 8.

§. 12. If

sions, which standing alone by themselves, might stand ill, and be suspected.

'Tis to this Zeal, allowable in his Function, that I forgive his citing, as he does, these Words of mine, in §. 11. of this Chapter; *The Exhortations of inspired Teachers have not feared to appeal to common Repute; whatsoever Things are lovely, whatsoever Things are of good Report, if there be any Virtue, if there be any Praise,* &c. Phil. iv. 8. without taking Notice of those immediately preceding, which introduce them, run thus: *Whereby in the Corruption of Manners, the true Boundaries of the Law of Nature, which ought to be the Rule of Virtue and Vice, were pretty well preserved: So that even the Exhortations of inspired Teachers,* &c. By which Words, and the rest of that Section, it is plain, that I brought that Passage of St. Paul, not to prove, that the general Measure of what Men call *Virtue* and *Vice*, throughout the World, was the Reputation and Fashion of each particular Society, within itself; but to shew, that tho' it were so, yet, for Reasons I there give Men, in that way of denominating their Actions, did not, for the most Part, much vary from the Law of Nature; which is that standing and unalterable Rule, by which they ought to judge of the moral Rectitude and Pravity of their Actions, and accordingly denominate them *Virtues*, or *Vices*. Had Mr. Lowde considered this, he would have found it little to his Purpose, to have quoted that Passage in a Sense I used it not; and would, I imagine,

§. 12. If any one should imagine, that I have forgot my own Notion of a Law, when I make *the Law*, whereby Men judge of *Virtue and Vice*, to be nothing else, but the Consent of private

*Its Inforce-
ments, Com-
mendation, and
Discredit.*

Men, who have not Authority enough to make a Law; especially wanting that, which is so necessary and essential to a Law, a Power to enforce it: I think, I may say, that he, who imagines Commendation and Disgrace not to be strong Motives on Men, to accommodate themselves to the Opinions and Rules of those with whom they converse, seems little skill'd in the Nature, or History of Mankind: The greatest Part whereof he shall find to govern themselves chiefly, if not solely, by this Law of Fashion; and so they do that which keeps them in Reputation with their Company, little regarding the Laws of God, or the Magistrate. The Penalties, that attend the Breach of God's Laws, some, nay, perhaps most, seldom seriously reflect on; and amongst those that do, many, whilst they break the Law, entertain Thoughts of future Reconciliation, and making their Peace for such

Breaches.

imagine, have spared the Explication he subjoins to it, as not very necessary. But I hope this second Edition will give him Satisfaction in the Point, and that this Matter is now so express'd, as to shew him there was no Cause of Scruple.

Tho' I am forced to differ from him in those Apprehensions he has express'd in the latter End of his Preface, concerning what I had said about *Virtue and Vice*; yet we are better agreed than he thinks, in what he says in his third Chapter, P. 73. concerning *natural Inscription*, and *innate Notions*. I shall not deny him the Privilege he claims, P. 52. to state the Question as he pleases, especially when he states it so, as to leave nothing in it contrary to what I have said: For, according to him, *Innate Notions being conditional Things, depending upon the Concurrence of several other Circumstances, in order to the Soul's exerting them*; all that he says for *innate, imprinted, impressed Notions*, (for of *innate Ideas* he says nothing at all) amounts at last only to this; That there are certain Propositions, which, tho' the Soul from the Beginning, or when a Man is born, does not know, yet by *Affistance from the outward Senses, and the Help of some previous Cultivation*, it may afterwards come certainly to know the Truth of; which is no more than what I have affirm'd in my first Book. For I suppose, by the *Soul's* exerting them, he means its Beginning to know them, or else the *Soul's* exerting of *Notions*, will

Breaches. And, as to the Punishments due from the Laws of the Commonwealth, they frequently flatter themselves with the Hopes of Impunity. But no Man 'scapes the Punishment of their Censure and Dislike, who offends against the Fashion and Opinion of the Company he keeps, and would recommend himself to. Nor is there one of ten thousand, who is stiff and insensible enough to bear up under the constant Dislike and Condemnation of his own Club. He must be of a strange and unusual Constitution, who can content himself to live in constant Disgrace and Disrepute with his own particular Society. Solitude many Men have sought, and been reconciled to; but no body, that has the least Thought, or Sense, of a Man about him, can live in Society under the constant Dislike and ill Opinion of his Familiars, and those he converses with. This is a Burthen too heavy for human Sufferance: And he must be made up of irreconcileable Contradictions, who can take Pleasure in Company, and yet be insensible of Contempt and Disgrace from his Companions.

§. 13. THESE

will be to me a very unintelligible Expression; and I think, at best, is a very unfit one in this Case, it misleading Mens Thoughts by an Insinuation, as if these Notions were in the Mind, before the Soul *exerts them*, i. e. before they are known; whereas, truly, before they are known, there is nothing of them in the Mind, but a Capacity to know them, when the *Concurrence of those Circumstances*, which this ingenious Author thinks necessary, *in order to the Soul's exerting them*, brings them into our Knowledge.

P. 52. I FIND him express it thus: *These natural Notions are not so imprinted upon the Soul, as that they naturally and necessarily exert themselves, (even in Children and Idiots) without any Assistance from the outward Senses, or without the Help of some previous Cultivation.* Here he says, *they exert themselves*, as P. 78. that the Soul exerts them. When he has explained to himself, or others, what he means by the Soul's exerting innate Notions, or their exerting themselves, and what that previous Cultivation and Circumstances, in order to their being exerted, are, he will, I suppose, find there is so little of Controversy between him and me in the Point, bating that he calls that exerting of Notions, which I, in a more vulgar Stile, call knowing, that I have Reason to think he brought in my Name upon this Occasion, only out of the Pleasure he has to speak civilly of me, which I must gratefully acknowledge he has done every where he mentions me, not without conferring on me, as some others have done, a Title I have no Right to.

§. 13. THESE three then, *First*, The Law of God; *Secondly*, The Law of politic Societies; *Thirdly*, The Law of Fashion, or private Censure; are those to which Men variously compare their Actions; and 'tis by their Conformity to one of these Laws, that they take their Measures, when they would judge of their moral Rectitude, and denominate their Actions good, or bad.

§. 14. WHETHER the Rule, to which, as to a Touch-stone, we bring our voluntary Actions, to examine them by, and try their Goodness, and accordingly to name them; which is, as it

*These three
Laws the Rules
of Moral
Good and Evil.*

*Morality is the
Relation of
Actions to
these Rules.*

were, the Mark of the Value we set upon them: Whether, I say, we take that Rule from the Fashion of the Country; or the Will of a Law-maker, the Mind is easily able to observe the Relation any Action hath to it, and to judge, whether the Action agrees, or disagrees with the Rule; and so hath a Notion of *moral Goodness, or Evil*, which is either Conformity, or not Conformity of any Action to that Rule: And, therefore, is often called Moral Rectitude. This Rule being nothing but a Collection of several simple Ideas, the Conformity thereto is but so ordering the Action, that the simple Ideas, belonging to it, may correspond to those which the Law requires. And thus we see, how moral Beings and Notions are founded on, and terminated in these simple Ideas we have receiv'd from Sensation, and Reflexion. For Example, Let us consider the complex Idea we signify by the Word Murder; and when we have taken it asunder, and examined all the Particulars, we shall find them to amount to a Collection of simple Ideas, deriv'd from Reflexion, or Sensation, *viz.* *First*, From Reflexion on the Operations of our own Minds, we have the Ideas of Willing, Considering, Purposing, before hand, Malice, or wishing ill to another; and also of Life, or Perception, and Self-Motion. *Secondly*, From Sensation, we have the Collection of those simple, sensible Ideas, which are to be found in a Man, and of some Action, whereby we put an End to Perception and Motion in the Man; all which simple Ideas, are comprehended in the Word Murder. This Collecti-

on of simple *Ideas*, being found by me to agree, or disagree with the Esteem of the Country I have been bred in, and to be held by most Men there, worthy Praise, or Blame, I call the Action virtuous, or vicious: If I have the Will of a supreme, invisible Law-maker for my Rule; then, as I supposed the Action commanded, or forbidden by God, I call it Good, or Evil, Sin, or Duty: And, if I compare it to the Civil Law, the Rule made by the Legislative Power of the Country, I call it lawful, or unlawful, a Crime, or no Crime. So that, whencesoever we take the Rule of Moral Actions, or by what Standard soever we frame in our Minds the *Ideas* of Virtues, or Vices, they consist only, and are made up of Collections, of simple *Ideas*, which we originally received from Sense, or Reflexion, and their Rectitude, or Obliquity consists in the Agreement, or Disagreement, with those Patterns prescribed by some Law.

§. 15. To conceive rightly of moral Actions, we must take notice of them under this two-fold Consideration. *First*, As they are in themselves each made up of such a Collection of simple *Ideas*. Thus *Drunkenness*, or *Lying*, signify such or such a Collection of simple *Ideas*, which I call Mixed Modes: And in this Sense they are as much *positive, absolute Ideas*, as the Drinking of a Horse, or Speaking of a Parrot. *Secondly*, Our Actions are considered as good, bad, or indifferent; and in this respect, they are *Relative*, it being their Conformity to, or Disagreement with some Rule, that makes them to be regular, or irregular, good, or bad: And so, as far as they are compared with a Rule, and thereupon denominated, they come under Relation. Thus the challenging and fighting with a Man, as it is a certain, positive Mode, or particular Sort of Action, by particular *Ideas*, distinguished from all others, is called *Duelling*: Which, when considered in relation to the Law of God, will deserve the Name, Sin; to the Law of Fashion, in some Countries, Valour and Virtue; and to the municipal Laws of some Governments, a capital Crime. In this Case, when the positive Mode has one Name, and another Name, as it stands in relation to the Law, the Distinction may as easily be observed, as it is in Substances, where

one Name, *v. g.* *Man* is used to signify the Thing; another, *v. g.* *Father*, to signify the Relation.

§. 16. But, because, very frequently the positive Idea of the Action, and its moral Relation, are comprehended together under one Name, and the same Word made use of to express both the Mode, or Action, and its moral Rectitude, or Obliquity; therefore the Relation itself is less taken notice of, and there is often no Distinction made between the Positive Idea of the Action, and the Reference it has to a Rule. By which Confusion of these two distinct Considerations, under one Term, those who yield too easily to the Impressions of Sounds, and are forward to take Names for Things, are often misled in their Judgment of Actions. Thus the taking from another what is his, without his Knowledge, or Allowance, is properly called *Stealing*; but that Name, being commonly understood to signify all the moral Pravity of the Action, and to denote its Contrariety to the Law, Men are apt to condemn whatever they hear called *Stealing*, as an ill Action, disagreeing with the Rule of Right: And yet the private taking away his Sword from a Mad-man, to prevent his doing Mischief, tho' it be properly denominat-ed, *Stealing*, as the Name of such a mixed Mode; yet, when com-pared to the Law of God, and consider'd in its Relation to that supreme Rule, it is no Sin, or Transgression, tho' the Name, *Stealing*, ordinarily carries such an Intimation with it.

§. 17. And thus much for the Relation of Human Actions to a Law, which, therefore, I call *Moral Relations*.

'TWOULD make a Volume to go over all Sorts of *Relations*; 'tis not, therefore, to be expected, that I should here mention them all. It suffices to our present Purpose, to shew by these, what the Ideas are we have of this comprehensive Consideration, call'd *Relation*: Which is so *varicus*, and the Occasions of it so *many*, (as many as there can be of comparing Things one to another) that it is not very easy to reduce it to Rules, or under just Heads. Those I have mentioned, I think, are some of the most considerable, and such as may serve to let us see, from whence we

The Denomi-nations of Actions often mis-lead us.

Relations in-numerable.

get our *Ideas* of Relations, and wherein they are founded. But before I quit this Argument, from what has been said, give me leave to observe ;

All Relations §. 18. *First*, THAT it is evident, that all *Relations* terminate in, and are ultimately founded in those *simple Ideas*, we have got from *Sensation*, or *Reflexion*: So that all that we have in our Thoughts ourselves, (if we think of any Thing, or have any Meaning) or would signify to others, when we use Words standing for Relations, is nothing but some simple *Ideas*, or Collections of simple *Ideas*, compared one with another. This is so manifest in that Sort called *Proportional*, that nothing can be more : For when a Man says, Honey is sweeter than Wax, it is plain, that his Thoughts, in this Relation, terminate in this simple *Idea*, Sweetness, which is equally true of all the rest; tho', where they are compounded, or decompounded, the simple *Ideas* they are made up of, are, perhaps, seldom taken notice of; v. g. when the Word, Father, is mentioned, *First*, there is meant that particular Species, or a collective *Idea*, signified by the Word Man. *Secondly*, Those sensible simple *Ideas*, signified by the Word Generation. And, *Thirdly*, The Effects of it, and all the simple *Ideas*, signified by the Word Child. So the Word Friend, being taken for a Man, who loves, and is ready to do good to another, has all these following *Ideas*, to the making of it up: *First*, all the simple *Ideas*, comprehended in the Word Man, or intelligent Being. *Secondly*, The *Idea* of Love. *Thirdly*, The *Idea* of Readiness, or Disposition. *Fourthly*, The *Idea* of Action, which is any kind of Thought, or Motion. *Fifthly*, The *Idea* of Good, which signifies any Thing that may advance his Happiness, and terminates at last, if examined, in particular, simple *Ideas*; of which the Word *Good* in general signifies any one; but, if removed from all simple *Ideas* quite, it signifies nothing at all. And thus, also, all moral Words terminate at last, tho', perhaps, more remotely, in a Collection of simple *Ideas*: The immediate Signification of relative Words, being very often other supposed known Relations; which, if traced one to another, still end in simple *Ideas*.

§. 19. Secondly, THAT in Relations, we have, for the most part, if not always, *as clear a Notion of the Relation, as we have of those simple Ideas, wherein it is founded.* Agreement, or Disagreement, whereon Relation depends, being Things whereof we have commonly as clear Ideas, as of any other whatsoever; it being but the distinguishing simple Ideas, or their Degrees, one from another, without which we could have no distinct Knowledge at all. For if I have a clear Idea of Sweetness, Light, or Extension, I have too, of equal, or more, or less, of each of these: If I know what it is for one Man to be born of a Woman, *viz. Sempronia*, I know what it is for another Man, to be born of the same Woman, *Sempronia*; and so have as clear a Notion of Brothers, as of Births, and, perhaps, clearer. For if I believed, that *Sempronia* digged *Titus* out of the Parsley-Bed, (as they use to tell Children) and thereby became his Mother; and that afterwards, in the same Manner, she digged *Cajus* out of the Parsley-Bed; I had as clear a Notion of the Relation of Brothers, between them, as if I had all the Skill of a Midwife: The Notion that the same Woman contributed, as Mother, equally to their Births, (tho' I were ignorant, or mistaken in the manner of it) being that, on which I grounded the Relation; and that they agreed in that Circumstance of Birth, let it be what it will. The comparing them then, in their Descent from the same Person, without knowing the particular Circumstances of that Descent, is enough to found my Notion of their having, or not having, the Relation of Brothers. But tho' the Ideas of particular Relations are capable of being as clear and distinct in the Minds of those, who will duly consider them, as those of mix'd Modes, and more determinate than those of Substances; yet the Names belonging to *Relation*, are often of as doubtful and uncertain Signification, as those of Substances, or mix'd Modes, and much more than those of simple Ideas; because relative Words, being the Marks of this Comparison, which is made only by Mens Thoughts, and is an Idea only in Mens Minds, Men frequently apply them to different Comparisons of Things, according to their own Imaginations, which do

We have ordinarily as clear (or clearer) a Notion of the Relation, as of its Foundation.

do not always correspond with those of others, using the same Names.

*The Notion of
the Relation is
the same, whe-
ther the Rule,
any Action is
compared to, be
true, or false.*

§. 20. *Thirdly, T H A T* in these I call *Moral Re-*
lations, I have a true Notion of Relation, by
comparing the Action with the Rule, whether
the Rule be true, or false. For if I measure any
Thing by a Yard, I know, whether the Thing,
I measure, be longer, or shorter, than that sup-
posed Yard; tho', perhaps, the Yard I measure
by, be not exactly the Standard; which, indeed, is another En-
quiry. For tho' the Rule be erroneous, and I mistaken in it; yet
the Agreement, or Disagreement, observable in that which I
compare with it, makes me perceive the Relation. Tho' meas-
uring by a wrong Rule, I shall thereby be brought to judge a-
misse of its moral Rectitude, because I have tried it, by that
which is not the true Rule; but I am not mistaken in the Re-
lation, which that Action bears to that Rule I compare it to,
which is Agreement, or Disagreement.

C H A P. XXIX.

Of Clear and Obscure, Distinct and Confused I D E A S.

Ideas; some
clear and di-
stinct, others
obscure and
confused.

§. 1. **H**AVING shewn the Original of
our *Ideas*, and taken a View of
their several Sorts; consider'd the

Difference between the simple and the complex,
and observ'd how the complex ones are divided into those of
Modes, Substances and Relations, all which, I think, is necessary
to be done by any one, who would acquaint himself thorough-
ly with the Progress, of the Mind, in its Apprehension and Know-
ledge of Things: It will, perhaps, be thought I have dwelt long
enough upon the Examination of *Ideas*. I must, nevertheless,
crave Leave to offer some few other Considerations concerning
them.

them. The first is, that some are *clear*, and others *obscure*; some *distinct*, and others *confused*.

§. 2. THE Perception of the Mind being *Clear and obscure, explained by Sight.*
most aptly explained by Words relating to the Sight, we shall best understand what is meant

by *clear* and *obscure* in our *Ideas*, by reflecting on what we call *clear* and *obscure* in the Objects of Sight. Light being that which discovers to us visible Objects, we give the Name of *obscure* to that which is not placed in a Light sufficient to discover minutely to us the Figure and Colours, which are observable in it, and which, in a better Light, would be discernible. In like manner our *simple Ideas* are *clear*, when they are such, as the Objects themselves, from whence they were taken, did, or might, in a well order'd Sensation, or Perception, present them. Whilst the Memory retains them thus, and can produce them to the Mind, whenever it has Occasion to consider them, they are *clear Ideas*. So far as they either want any thing of that original Exactness, or have lost any of their first Freshness, and are, as it were, faded, or tarnished by Time, so far are they *obscure*. *Complex Ideas*, as they are made up of simple ones, so they are *clear*, when the *Ideas* that go to their Composition are clear; and the Number and Order of those simple *Ideas*, that are the Ingredients of any complex one, is determinate and certain.

§. 3. THE Causes of Obscurity, in simple Ideas, *Causes of Obscurity.*
seem to be either dull Organs, or very slight
and transient Impressions, made by the Objects;
or else a Weakness in the Memory, not able to retain them as received. For, to return again to visible Objects; to help us to apprehend this Matter; if the Organs, or Faculties of Perception, like Wax over-harden'd with Cold, will not receive the Impression of the Seal, from the usual Impulse wont to imprint it; or, like Wax of a Temper too soft, will not hold it well, when well imprinted; or else, supposing the Wax of a Temper fit, but the Seal not applied with a sufficient Force to make a clear Impression: In any of these Cases, the Print left by the Seal

Seal will be *obscure*. This, I suppose,¹ needs no Application to make it plainer.

Distinct and confused, what. §. 4. As a *clear Idea* is that, whereof the Mind has such a full and evident Perception, as it does receive from an outward Object, operating duly on a well-disposed Organ; so a *distinct Idea* is that, wherein the Mind perceives a Difference from all other; and a *confused Idea* is such an one, as is not sufficiently distinguishable from another, from which it ought to be different.

Objection. §. 5. If no *Idea* be *confused*, but such as is not sufficiently distinguishable from another, from which it should be different, it will be hard, may any one say, to find any where a *confused Idea*. For let any *Idea* be as it will, it can be no other but such as the Mind perceives it to be; and that very Perception sufficiently distinguishes it from all other *Ideas*, which cannot be other, i. e. different, without being perceived to be so. No *Idea*, therefore, can be undistinguishable from another, from which it ought to be different, unless you would have it different from itself: For from all other it is evidently different.

Confusion of Ideas, is in Reference to their Names. §. 6. To remove this Difficulty, and to help us to conceive aright what it is that makes the *Confusion Ideas* are at any Time chargeable with, we must consider, that Things, ranked under distinct Names, are supposed different enough to be distinguished, that so each Sort, by its peculiar Name, may be marked, and discoursed of apart, upon any Occasion: And there is nothing more evident, than that the greatest Part of different Names are supposed to stand for different Things. Now, every *Idea* a Man has, being visible what it is, and distinct from all other *Ideas* but itself, that which makes it *confused*, is, when it is such, that it may as well be called by another Name, as that which it is expressed by; the Difference which keeps the Thoughts (to be ranked under those two different Names) distinct, and makes some of them belong rather to the one, and some of them to the other of those Names, being left out; and so

so the Distinction, which was intended to be kept up by those different Names, is quite lost.

§. 7. THE Defaults which usually occasion this Confusion, I think, are chiefly these following :

First, WHEN any complex Idea (for 'tis complex Ideas that are most liable to Confusion) is made up of too small a Number of simple Ideas, and such only as are common to other Things, whereby the Differences that make it, deserve a different Name, are left out. Thus he, that has an Idea made up of barely the simple ones of a Beast with Spots, has but a confused Idea of a Leopard, it not being thereby sufficiently distinguished from a Lynx, and several other Sorts of Beasts, that are spotted. So that such an Idea, tho' it hath the peculiar Name, Leopard, is not distinguishable from those designed by the Names, Lynx, or Panther, and may as well come under the Name, Lynx, as Leopard. How much the Custom of defining of Words by general Terms, contributes to make the Ideas, we would express by them, confused and undetermined, I leave others to consider. This is evident, that confused Ideas are such, as render the Use of Words uncertain, and take away the Benefit of distinct Names. When the Ideas, for which we use different Terms, have not a Difference, answerable to their distinct Names, and so cannot be distinguished by them, there it is that they are truly confused.

§. 8. Secondly, ANOTHER Default, which makes our Ideas confused, is, when, tho' the Particulars, that make up any Idea, are in Number enow; yet they are so jumbled together, that it is not easily discernible, whether it more belongs to the Name that is given it, than to any other. There is nothing properer to make us conceive this Confusion, than a Sort of Pictures, usually shewn, as surprizing Pieces of Art, wherein the Colours, as they are laid by the Pencil, on the Table itself, mark out very odd and unusual Figures, and have no discernible Order in their Position. This Draught, thus made up of Parts, wherein no Symmetry nor Order appears, is, in itself, no

Defaults
which make
Confusion. First
complex Ideas,
made up of too
few simple
ones.

Secondly, Or
its simple ones,
jumbled disor-
derly together.

more

more a confused Thing, than the Picture of a cloudy Sky; wherein, tho' there be as little Order of Colours, or Figures, to be found, yet no body thinks it a confused Picture. What is it then, that makes it be thought confused, since the Want of Symmetry does not? as it is plain it does not; for another Draught made, barely in Imitation of this, could not be called confused. I answer, That, which makes it be thought confused, is, the applying it to some Name, to which it does no more discernibly belong, than to some other; *v. g.* When it is said to be the Picture of a Man, or *Cæsar*, then any one, with Reason, counts it confused; because it is not discernible, in that State, to belong more to the Name Man, or *Cæsar*, than to the Name Baboon, or *Pompey*; which are supposed to stand for different Ideas from those signified by Man, or *Cæsar*. But, when a cylindrical Mirrour, placed right, hath reduced those irregular Lines, on the Table, into their due Order and Proportion, then the Confusion ceases, and the Eye presently sees that it is a Man, or *Cæsar*; i. e. That it belongs to those Names; and that it is sufficiently distinguishable from a Baboon, or *Pompey*; i. e. from the Idea; signified by those Names. Just thus it is with our Ideas, which are, as it were, the Pictures of Things. No one of these mental Draughts, however the Parts are put together, can be called confused, (for they are plainly discernible as they are,) till it be ranked under some ordinary Name, to which it cannot be discerned to belong, any more than it does to some other Name, of an allowed different Signification.

*Thirdly, Or
are mutable,
and undeter-
mined.*

§. 9. *Thirdly, A THIRD Defect, that frequently gives the Name of confused to our Ideas, is, when any one of them is uncertain and undetermined.*

Thus we may observe Men, who, not forbearing to use the ordinary Words of their Language, till they have learned their precise Signification, change the Idea they make this, or that Term stand for, almost as often as they use it. He that does this, out of uncertainty of what he should leave out, or put into his Idea of *Church*, or *Idolatry*, every Time he thinks of either, and holds not steady to any one precise Combination of Ideas, that makes it up, is said to have a confused

Idea

Idea of Idolatry, or the Church : Tho' this be still for the same reason that the former, *viz.* because a mutable *Idea* (if we will allow it to be one *Idea*) cannot belong to one Name, rather than another ; and so loses the Distinction that distinct Names are design'd for.

§. 10. By what has been said, we may observe how much *Names*, as supposed, steady Signs of Things, and by their Difference to stand for, and keep Things distinct, that in themselves are different, are the *Occasion of denominating Ideas distinct, or confused*, by a secret and unobserved Reference the Mind makes, of its *Ideas* to such *Names*. This, perhaps, will be fuller understood, after what I say of Words, in the Third Book, has been read and consider'd. But, without taking Notice of such a Reference of *Ideas*, to distinct *Names*, as the Signs of distinct Things, it will be hard to say, what a *confused Idea* is. And, therefore, when a Man designs, by any *Name*, a Sort of Things, or any one particular Thing, distinct from all others ; the complex *Idea* he annexes to that *Name*, is the more distinct, the more particular the *Ideas* are, and the greater and more determinate the Number and Order of them is, whereof it is made up. For the more it has of these, the more has it still of the perceivable Differences, whereby it is kept separate and distinct from all *Ideas*, belonging to other *Names*, even those that approach nearest to it, and thereby all Confusion with them is avoided.

*Confusion,
without Refe-
rence to Names,
hardly conceiv-
able.*

§. 11. CONFUSION, making it a Difficulty to separate two Things, that should be separated, concerns always two *Ideas*; and those most, which most approach one another. Whenever, therefore, we suspect any *Idea* to be *confused*, we must examine what other it is in Danger to be confounded with, or which it cannot easily be separated from : And that will always be found an *Idea*, belonging to another *Name*, and so should be a different Thing, from which yet it is not sufficiently distinct, being either the same with it, or making a Part of it, or, at least, as properly called by that *Name*, as the other it is ranked under; and so keeps not

*Confusion con-
cerns always
two Ideas.*

that Difference from that other *Idea*, which the different Names import.

Causes of Con- §. 12. This, I think, is the *Confusion* proper to *Ideas*, which still carries with it a secret *confusion*.

Reference to Names. At least, if there be any other Confusion of *Ideas*, this is that which most of all disorders Mens Thoughts and Discourses: *Ideas*, as ranked under Names, being those, that for the most Part Men reason of within themselves, and always those, which we commune about with others. And, therefore, where there are supposed two different *Ideas*, marked by two different Names, which are not as distinguishable, as the Sounds that stand for them, there never fails to be *Confusion*: And, where any *Ideas* are distinct, as the *Ideas* of those two Sounds they are mark'd by, there can be between them no *Confusion*. The way to prevent it, is to collect and unite into one complex *Idea*, as precisely as is possible, all those Ingredients, whereby it is differenced from others; and to them, so united, in a determinate Number, or Order, apply steadily the same Name. But this neither accommodating Mens Ease, or Vanity, or serving any Design, but that of naked Truth, which is not always the Thing aimed at, such Exactness is rather to be wished, than hoped for. And, since the loose Application of Names to undetermined, variable, and almost no *Ideas*, serves both to cover our own Ignorance, as well as to perplex and confound others, which goes for Learning and Superiority in Knowledge, it is no wonder, that most Men should use it themselves, whilst they complain of it in others. Tho', I think, no small Part of the *Confusion*, to be found in the Notions of Men, might by Care and Ingenuity be avoided, yet I am far from concluding it every where wilful. Some *Ideas* are so complex, and made up of so many Parts, that the Memory does not easily retain the very same precise Combination of simple *Ideas*, under one Name; much less are we able constantly to divine, for what precise, complex *Idea*, such a Name stands, in another Man's Use of it. From the first of these, follows *Confusion* in a Man's own Reasonings and Opinions, within himself; from the latter, frequent *Confusion* in discoursing and arguing with others. But, having

more

more at large treated of Words, their Defects and Abuses, in the following Book, I shall here say no more of it.

§. 13. Our *Complex Ideas*, being made up of Collections, and so Variety of simple ones may accordingly be very clear and distinct in one Part, and very obscure and confused in another.

In a Man, who speaks of a *Chiliaedron*, or a Body of a thousand Sides, the *Idea* of the Figure may be very confused, tho' that of the Number be very distinct; so that, he being able to discourse, and demonstrate concerning that Part of his complex *Idea*, which depends upon the Number of a thousand, he is apt to think he has a distinct *Idea* of a *Chiliaedron*; tho' it be plain, he has no precise *Idea* of its Figure, so as to distinguish it by that, from one that has but 999 Sides: The not observing whereof, causes no small Error in Mens Thoughts, and Confusion in their Discourses.

*Complex Ideas
may be distinct
in one Part,
and confused in
another.*

§. 14. He that thinks he has a distinct *Idea* of the Figure of a *Chiliaedron*, let him for Trial take another Parcel of the same uniform Matter, *viz.* Gold, or Wax, of an equal Bulk, and make it into a Figure of 999 Sides; he will, I doubt not, be able to distinguish these two *Ideas* one from another, by the Number of Sides; and reason and argue distinctly about them, whilst he keeps his Thoughts and Reasoning to that Part only of these *Ideas*, which is contain'd in their Numbers; as that the Sides of the one could be divided into two equal Numbers, and of the other not, &c. But, when he goes about to distinguish them by their Figure, he will there be presently at a Loss, and not be able, I think, to frame in his Mind two *Ideas*, one of them distinct from the other, by the bare Figure of these two Pieces of Gold; as he could, if the same Parcels of Gold were made one into a Cube, the other a Figure of five Sides. In which incomplete *Ideas*, we are very apt to impose on ourselves, and wrangle with others, especially, where they have particular and familiar Names. For, being satisfied in that Part of the *Idea*, which we have clear; and the Name which is familiar to us, being applied to the Whole, containing that Part also which is imperfect

*This, if not
heeded, causes
Confusion in
our Arguings.*

imperfect and obscure; we are apt to use it for that confused Part, and draw Deductions from it, in the obscure Part of its Signification, as confidently as we do from the other.

Instance in Eternity. §. 15. HAVING frequently in our Mouths the Name *Eternity*, we are apt to think we

have a positive, comprehensive *Idea* of it, which is as much as to say, that there is no Part of that Duration, which is not clearly contain'd in our *Idea*. 'Tis true, that he that thinks so, may have a clear *Idea* of Duration; he may also have a very clear *Idea* of a very great Length of Duration; he may also have a clear *Idea* of the Comparison of that great one, with still a greater: But it not being possible for him to include in his *Idea* of any Duration, let it be as great as it will, the whole Extent together of a Duration, where he supposes no End, that part of his *Idea*, which is still beyond the Bounds of that large Duration, he represents to his own Thoughts, is very obscure and undetermined. And hence it is, that in Disputes and Reasonings concerning Eternity, or any other *Infinite*, we are apt to blunder, and involve ourselves in manifest Absurdities.

Divisibility of Matter. §. 16. IN Matter, we have no clear *Ideas* of the Smallness of Parts, much beyond the small-

est that occur to any of our Senses; and therefore when we talk of the Divisibility of Matter *in infinitum*, tho' we have clear *Ideas* of Division, and Divisibility, and have also clear *Ideas* of Parts made out of a Whole by Division; yet we have but very obscure and confused *Ideas* of Corpuscles, or minute Bodies, so to be divided, when, by former Divisions, they are reduced to a Smallness, much exceeding the Perception of any of our Senses; and so all that we have clear and distinct *Ideas* of, is of what Division in general, or abstractedly is, and the Relation of *Totum* and *Pars*: But of the Bulk of the Body, to be thus infinitely divided, after certain Progressions, I think, we have no clear, nor distinct *Idea* at all. For I ask any one, whether taking the smallest Atom of Dust he ever saw, he has any distinct *Idea* (bating still the Number, which concerns not Extension) betwixt the 100,000th, and the 1,000,000th Part of it? Or if he thinks he can refine his *Ideas* to that Degree, without losing Sight

of them, let him add ten Cyphers to each of those Numbers. Such a Degree of Smallness is not unreasonable to be supposed, since a Division carried on so far, brings it no nearer the End of infinite Division, than the first Division, into two Halves, does. I must confess, for my Part, I have no clear, distinct *Ideas* of the different Bulk, or Extension of those Bodies, having but a very obscure one of either of them. So that, I think, when we talk of Division of Bodies *in infinitum*, our *Idea* of their distinct Bulks, which is the Subject and Foundation of Division, comes, after a little Progression, to be confounded, and almost lost in Obscurity. For that *Idea*, which is to represent only Bigness, must be very obscure and confused, which we cannot distinguish from one ten times as big, but only by Number; so that we have clear, distinct *Ideas* we may say, of ten and one, but no distinct *Ideas* of two such Extensions. 'Tis plain from hence, that, when we talk of infinite Divisibility of Body, or Extension, our distinct, and clear *Ideas* are only of Numbers; but the clear, distinct *Ideas* of Extension, after some Progress of Division, is quite lost: And of such minute Parts, we have no distinct *Ideas* at all; but it returns, as all our *Ideas* of infinite do, at last to that of Number always to be added; but thereby never amounts to any distinct *Idea* of actual, infinite Parts. We have, 'tis true, a clear *Idea* of Division, as often as we think of it; but thereby we have no more a clear *Idea* of infinite Parts, in Matter, than we have a clear *Idea* of an infinite Number, by being able still to add new Numbers to any assigned Number we have: Endless Divisibility, giving us no more a clear, and distinct *Idea* of actually infinite Parts, than endless Addibility (if I may so speak) gives us a clear, and distinct *Idea* of an actually infinite Number. They both being only in a Power still of increasing the Number, be it already as great as it will. So that of what remains to be added (wherein consists the Infinity) we have but an obscure, imperfect, and confused *Idea*; from, or about, which we can argue, or reason with no Certainty, or Clearness, no more than we can in Arithmetic, about a Number, of which we have no such distinct *Idea*, as we have of 4, or 100; but only this relative, obscure one, that compared to any other, it is still bigger;

and

and we have no more a clear, positive *Idea* of it, when we say, or conceive it is bigger, or more than 400,000,000, than if we should say, it is bigger than 40, or 4 ; 400,000,000, having no nearer a Proportion to the End of Addition, or Number, than 4. For he that adds only four to 4, and so proceeds, shall as soon come to the End of all Addition, as he that adds 400,000,000, to 400,000,000. And so likewise, in Eternity, he that has an *Idea* of but four Years, has as much a positive, compleat *Idea* of Eternity, as he that has one of 400,000,000, of Years : For what remains of Eternity, beyond either of these two Numbers of Years, is as clear to the one as the other ; *i. e.* neither of them has any clear, positive *Idea* of it at all. For he that adds only 4 Years to 4, and so on ; shall as soon reach Eternity, as he that adds 400,000,000, of Years, and so on ; or if he please, doubles the Encrease, as often as he will : The remaining Abyss being still as far beyond the End of all these Progressions, as it is from the Length of a Day, or an Hour. For nothing finite bears any Proportion to infinite ; and, therefore, our *Ideas*, which are all finite, cannot bear any. Thus it is also in our *Idea* of Extension, when we increase it by Addition, as well as when we diminish it by Division, and would enlarge our Thoughts to infinite Space. After a few Doublings of those *Ideas* of Extension, which are the largest we are accustomed to have, we lose the clear, distinct *Idea* of that Space : It becomes a confusedly great one, with a Surplus of still greater ; about which, when we would argue, or reason, we shall always find ourselves at a loss ; confused *Ideas*, in our Arguings and Deductions from that Part of them, which is confused, always leading us into Confusion.

C H A P. XXX.

Of Real and Fantastical Ideas.

§. 1. **B**E SIDES what we have already mention'd concerning *Ideas*, other Considerations belong to them, in reference to Things, from whence they are taken, or which they may be supposed to represent ; and thus, I think, they may come under a threefold Distinction ; and are;

First, Either real, or fantastical.

Secondly, Adequate, or inadequate.

Thirdly, True, or false.

First, By *Real Ideas*, I mean such as have a Foundation in Nature ; such as have a Conformity with the real Being and Existence of Things, or with their Archetypes. *Fantastical*, or *Chimerical*, I call such as have no Foundation in Nature, nor have any Conformity with that Reality of Being, to which they are tacitly referred, as to their Archetypes. If we examine the several Sorts of *Ideas* before mentioned, we shall find, that,

§. 2. *First*, Our simple Ideas are all real, all agree to the Reality of Things : Not that they are all of them the Images, or Representations, of what does exist ; the contrary whereof, in all but the primary Qualities of Bodies, hath been already shewn. But tho' Whiteness and Coldness are no more in Snow, than Pain is ; yet those *Ideas* of Whiteness and Coldness, Pain, &c. being in us the Effects of Powers in Things without us, ordained by our Maker, to produce in us such Sensations ; they are real *Ideas* in us, whereby we distinguish the Qualities that are really in Things themselves. For these several Appearances being designed to be the Marks, whereby we are to know and distinguish Things, which we have to do with, our *Ideas* do as well serve us to that Purpose, and are as real, distinguishing Characters, whether they be only constant Effects, or else exact Resemblances of something in

Real Ideas are conformable to their Archetypes.

in the Things themselves; the Reality lying in that steady Correspondence they have with the distinct Constitutions of real Beings. But, whether they answer to those Constitutions, as to Causes, or Patterns, it matters not; it suffices that they are constantly produced by them. And thus our simple *Ideas* are all real and true; because they answer and agree to those Powers of Things, which produce them in our Minds, that being all that is requisite to make them real, and not Fictions at pleasure. For in simple *Ideas*, (as has been shewn) the Mind is wholly confined to the Operation of Things upon it, and can make to itself no simple *Idea*, more than what it has received.

*Complex Ideas
are voluntary
Combinations.* §. 3. THo' the Mind be wholly passive, in respect of its simple *Ideas*, yet, I think, we may say, it is not so in respect of its complex *Ideas*: For

those being Combinations of simple *Ideas* put together, and united under one general Name; 'tis plain that the Mind of Man uses some kind of Liberty, in forming those complex *Ideas*: How else comes it to pass, that one Man's *Idea* of Gold, or Justice, is different from another's? But because he has put in, or left out of his, some simple *Idea* which the other has not. The Question then is, Which of these are real, and which barely imaginary Combinations? What Collections agree to the Reality of Things, and what not? And to this, I say, That,

*Mixed Modes
made of consist-
ent Ideas, are
real.* §. 4. Secondly, MIXED Modes and Relations having no other Reality but what they have in the Minds of Men, there is nothing more required to those kind of *Ideas*, to make them

real, but that they be so framed, that there be a Possibility of existing conformable to them. These *Ideas* themselves, being Archetypes, cannot differ from their Archetypes, and so cannot be chimerical, unless any one will jumble together in them inconsistent *Ideas*. Indeed, as any of them have the Names of a known Language assigned to them, by which he, that has them in his Mind, would signify them to others, so bare Possibility of existing is not enough; they must have a Conformity to the ordinary Signification of the Name that is given them,

them, that they may not be thought fantastical: As if a Man would give the Name of Justice to that *Idea*, which common Use calls Liberality. But this Fantasticalness relates more to Propriety of Speech, than Reality of *Ideas*: For a Man to be undisturbed in Danger, sedately to consider what is fittest to be done, and to execute it steadily, is a mixed Mode, or a complex *Idea* of an Action, which may exist. But to be undisturbed in Danger, without using one's Reason, or Industry, is what is also possible to be; and so is as real an *Idea* as the other. Tho' the first of these having the Name *Courage* given to it, may, in respect of that Name, be a right, or wrong *Idea*: But the other, whilst it has not a common received Name, of any known Language, assigned to it, is not capable of any Deformity, being made with no reference to any thing but itself.

§. 5. Thirdly, Our complex Ideas of Substances being made all of them in reference to Things, existing without us, and intended to be Representations of Substances, as they really are, are no farther *real*, than as they are such Combinations of simple *Ideas*, as are really united, and co-exist in Things without us. On the contrary, those are *fantastical*, which are made up of such Collections of simple *Ideas*, as were really never united, never were found together in any Substance; v. g. a rational Creature, consisting of a Horse's Head, joined to a Body of human Shape, or such as the *Centaurs* are described: Or, a Body yellow, very malleable, fusible, and fixed; but lighter than common Water: Or, an uniform, unorganized Body, consisting, as to Sense, all of similar Parts, with Perception and voluntary Motion joined to it. Whether such Substances as these can possibly exist, or no, 'tis probable we do not know: But, be that as it will, these *Ideas* of Substances, being made conformable to no Pattern existing, that we know, and consisting of such Collections of *Ideas*, as no Substance ever shewed us united together, they ought to pass with us for barely imaginary: But much more are those complex *Ideas* so, which contain in them any Inconsistency, or Contradiction of their Parts.

Ideas of Substances are real, when they agree with the Existence of Things.

C H A P. XXXI.

Of Adequate and Inadequate Ideas.

*Adequate Ideas
are such as
perfectly re-
present their
Archetypes.*

§. 1. **O**f our real *Ideas*, some are adequate, and some are inadequate. Those I call *adequate*, which perfectly represent those Archetypes, which the Mind supposes them taken from; which it intends them to stand for, and to which it refers them. *Inadequate Ideas* are such, which are but a partial, or incomplete Representation of those Archetypes, to which they are referred. Upon which account it is plain,

*Simple Ideas
all adequate.* §. 2. *First, THAT all our simple Ideas are adequate:* Because being nothing but the Effects of certain Powers in Things, fitted and ordained by God to produce such Sensations in us, they cannot but be correspondent and adequate to those Powers: And we are sure they agree to the Reality of Things. For, if Sugar produce in us the *Ideas*, which we call Whiteness and Sweetness, we are sure there is a Power in Sugar to produce those *Ideas* in our Minds, or else they could not have been produced by it. And so each Sensation answering the Power, that operates on any of our Senses, the *Idea* so produced is a real *Idea*, (and not a Fiction of the Mind, which has no Power to produce any simple *Idea*;) and cannot but be adequate, since it ought only to answer that Power: And so all simple *Ideas* are adequate. 'Tis true, the Things producing in us these simple *Ideas*, are but few of them denominated by us, as if they were only the Causes of them; but as if those *Ideas* were real Beings in them. For, tho' Fire be called painful to the Touch, whereby is signified the Power of producing in us the *Idea* of Pain, yet it is denominated also Light and Hot; as if Light and Heat were really something in the Fire, more than a Power to excite these *Ideas* in us; and therefore are called *Qualities* in, or of the Fire. But these being nothing,

in truth, but Powers to excite such *Ideas* in us, I must, in that Sense, be understood, when I speak of secondary *Qualities*, as being in Things; or of their *Ideas*, as being in the Objects that excite them in us. Such ways of speaking, tho' accommodated to the vulgar Notions, without which one cannot be well understood; yet truly signify nothing, but those Powers which are in Things, to excite certain Sensations, or *Ideas* in us. Since, were there no fit Organs, to receive the Impressions Fire makes on the Sight and Touch, nor a Mind joined to these Organs, to receive the *Ideas* of Light and Heat, by those Impressions from the Fire, or the Sun, there would yet be no more Light, or Heat in the World, than there would be Pain, if there were no sensible Creature to feel it, tho' the Sun should continue just as it is now, and Mount *Ætna* flame higher than ever it did. Solidity and Extension, and the Termination of it, Figure, with Motion and Rest, whereof we have the *Ideas*, would be really in the World, as they are, whether there were any sensible Being to perceive them, or no: And, therefore, those we have Reason to look on those as the real Modifications of Matter, and such as are the exciting Causes of all our various Sensations from Bodies. But this being an Enquiry not belonging to this Place, I shall enter no farther into it, but proceed to shew, what complex *Ideas* are *adequate*, and what not.

§. 3. Secondly, Our complex Ideas of Modes, being voluntary Collections of simple *Ideas*, which the Mind puts together, without reference to any real Archetypes, or standing Patterns, existing any where, are, and cannot but be, *adequate Ideas*: Because, they not being intended for Copies of Things really existing, but for Archetypes made by the Mind, to rank and denominate Things by, cannot want any Thing; they having each of them that Combination of *Ideas*, and thereby that Perfection, which the Mind intended they should: So that the Mind acquiesces in them, and can find nothing wanting. Thus, by having the *Idea* of a Figure, with three Sides, meeting at three Angles, I have a complete *Idea*, wherein I require nothing else to make it perfect. That the Mind is satisfied with the Perfection of this its *Idea*, is plain, in that

it does not conceive that any Understanding hath, or can have a more complete, or perfect *Idea*, of that Thing it signifies by the Word *Triangle*, supposing it to exist, than itself has in that complex *Idea* of three Sides and three Angles; in which is contained all that is, or can be essential to it, or necessary to complete it, wherever, or however it exists. But, in our *Ideas of Substances*, it is otherwise. For there, desiring to copy Things as they really do exist, and to represent to ourselves that Constitution, on which all their Properties depend, we perceive our *Ideas* attain not that Perfection we intend: We find they still want something we should be glad were in them; and so are all *inadequate*. But *mixed Modes*, and *Relations*, being Arche-types without Patterns, and so, having nothing to represent but themselves, cannot but be *adequate*, every thing being so to itself. He, that at first put together the *Idea* of Danger, perceived Absence of Disorder from Fear, sedate Consideration of what was justly to be done, and executing of that, without Disturbance, or being deterred by the Danger of it, had certainly in his Mind that complex *Idea*, made up of that Combination, and intending it to be nothing else but what it is, nor to have in it any other simple *Ideas*, but what it hath, it could not also but be an *adequate Idea*: And laying this up in his Memory, with the Name *Courage* annexed to it, to signify it to others, and denominate from thence any Action he should observe to agree with it, had thereby a Standard to measure and denominate Actions by, as they agreed to it. This *Idea*, thus made, and laid up for a Pattern, must necessarily be *adequate*, being referred to nothing else but itself, nor made by any other Original, but the Good-loving and Will of him that first made this Combination.

Modes, in reference to settled Names, may be inadequate.

§. 4. INDEED, another coming after, and in Conversation learning from him the Word *Courage*, may make an *Idea*, to which he gives that Name *Courage*, different from what the first Author applied it to, and has in his Mind, when he uses it. And in this Case, if he designs that his *Idea* in Thinking should be conformable to the other's *Idea*, as the Name he uses

uses in Speaking is conformable in Sound to his, from whom he learned it, his *Idea* may be very wrong, and *inadequate*: Because in this Case, making the other Man's *Idea* the Pattern of his *Idea* in Thinking, as the other Man's Word, or Sound, is the Pattern of his in Speaking, his *Idea* is so far defective and *inadequate*, as it is distant from the Archetype and Pattern he refers it to, and intends to express and signify by the Name he uses for it; which Name he would have to be a Sign of the other Man's *Idea*, (to which, in its proper Use, it is primarily annexed) and of his own, as agreeing to it: To which, if his own does not exactly correspond, it is faulty and inadequate.

§. 5. THEREFORE these *complex Ideas of Modes*, when they are referred by the Mind, and intended to correspond to the *Ideas* in the Mind of some other intelligent Being, expressed by the Names we apply to them, they may be very deficient, wrong, and *inadequate*; because they agree not to that, which the Mind designs to be their Archetype and Pattern: In which respect only, any *Idea of Modes* can be wrong, imperfect, or *inadequate*. And on this account, our *Ideas of mixed Modes* are the most liable to be faulty of any other; but this refers more to proper Speaking, than Knowing right.

§. 6. Thirdly, WHAT *Ideas we have of Substances*, I have above shewn: Now, those *Ideas* have in the Mind a double Reference: 1. Sometimes they are referred to a supposed, real Essence of each Species of Things. 2. Sometimes they are only design'd to be Pictures and Representations, in the Mind, of Things that do exist, by *Ideas* of those Qualities that are discoverable in them. In both which ways, these Copies of those Originals and Archetypes, are imperfect and *inadequate*.

Ideas of Substances, as refer'd to real Essences, not adequate.

First, It is usual for Men to make the Names of Substances stand for Things, as supposed to have certain real Essences, whereby they are of this, or that Species: And Names standing for nothing but the *Ideas* that are in Men's Minds, they must consequently refer their *Ideas* to such real Essences, as to their Archetypes. That Men (especially such as have been bred up

in the Learning taught in this Part of the World) do suppose certain specific Essences of Substances, which each Individual, in its several Kinds, is made conformable to, and partakes of, is so far from needing Proof, that it will be thought strange, if any one should do otherwise. And thus they ordinarily apply the specific Names they rank particular Substances under, to Things, as distinguished by such specific, real Essences. Who is there almost, who would not take it amiss, if it should be doubted, whether he called himself Man, with any other Meaning, than as having the real Essence of a Man? And yet, if you demand, what those real Essences are, 'tis plain Men are ignorant, and know them not. From whence it follows, that the *Ideas* they have in their Minds, being referred to real Essences, as to Arche-types which are unknown, must be so far from being *adequate*, that they cannot be supposed to be any Representation of them at all. The complex *Ideas* we have of Substances, are, as it has been shewn, certain Collections of simple *Ideas*, that have been observed, or supposed constantly to exist together. But such a complex *Idea* cannot be the real Essence of any Substance; for then the Properties we discover in that Body, would depend on that complex *Idea*, and be deducible from it, and their necessary Connexion with it be known; as all Properties of a Triangle depend on, and, as far as they are discoverable, are deducible from the complex *Idea* of three Lines, including a Space. But it is plain, that in our complex *Ideas* of Substances, are not contained such *Ideas*, on which all the other Qualities, that are to be found in them, do depend. The common *Idea* Men have of Iron, is a Body of a certain Colour, Weight, and Hardness; and a Property that they look on, as belonging to it, is Malleableness. But yet this Property has no necessary Connexion with that complex *Idea*, or any Part of it: And there is no more Reason to think, that Malleableness depends on that Colour, Weight, and Hardness, than that That Colour, or that Weight, depends on its Malleableness. And yet, tho' we know nothing of these real Essences, there is nothing more ordinary, than that Men should attribute the Sorts of Things to such Essences. The particular Parcel of Matter,

Matter, which makes the Ring I have on my Finger, is forwardly, by most Men, supposed to have a real Essence, whereby it is *Gold*; and from whence those Qualities flow, which I find in it, *viz.* its peculiar Colour, Weight, Hardness, Fusibility, Fixedness, and Change of Colour, upon a slight Touch of Mercury, &c. This Essence, from which all these Properties flow, when I enquire into it, and search after it, I plainly perceive I cannot discover; the farthest I can go, is only to presume, that it being nothing but Body, its real Essence, or internal Constitution, on which these Qualities depend, can be nothing but the Figure, Size, and Connexion of its solid Parts; of neither of which, having any distinct Perception at all, I can have no *Idea* of its Essence, which is the Cause that it has that particular, shining Yellowness, a greater Weight than any thing I know, of the same Bulk, and a Fitness to have its Colour changed by the Touch of Quicksilver. If any one will say, that the real Essence, and internal Constitution, on which these Properties depend, is not the Figure, Size, and Arrangement, or Connexion, of its solid Parts, but something else, call'd its particular *Form*; I am farther from having any *Idea* of its real Essence, than I was before; for I have an *Idea* of Figure, Size, and Situation of solid Parts in general, tho' I have none of the particular Figure, Size, or putting together of Parts, whereby the Qualities above mentioned are produced; which Qualities I find in that particular Parcel of Matter, that is on my Finger, and not in another Parcel of Matter, with which I cut the Pen I write with. But when I am told, that something, besides the Figure, Size, and Posture of the solid Parts of that Body, is its Essence, something called, *substantial Form*; of that, I confess, I have no *Idea* at all, but only of the Sound, *Form*; which is far enough from an *Idea* of its real Essence, or Constitution. The like Ignorance, as I have of the real Essence of this particular Substance, I have also of the real Essence of all other natural ones: Of which Essences, I confess, I have no distinct *Ideas* at all; and I am apt to suppose others, when they examine their own Knowledge, will find in themselves, in this one Point, the same sort of Ignorance.

§. 7. Now then, when Men apply to this particular Parcel of Matter on my Finger, a general Name, already in Use, and denote-

396. Adequate and Inadequate Ideas. Book II.

nominate it *Gold*, do they not ordinarily, or are they not understood to give it that Name, as belonging to a particular Species of Bodies, having a real, internal Essence; by having of which Essence, this particular Substance comes to be of that Species, and to be called by that Name? If it be so, as it is plain it is, the Name, by which Things are marked, as having that Essence, must be referred primarily to that Essence; and consequently the *Idea*, to which that Name is given, must be referred also to that Essence, and be intended to represent it. Which Essence, since they, who so use the Names, know not, their Ideas of Substances must be all inadequate in that respect, as not containing in them that real Essence, which the Mind intends they should.

Ideas of Substances, as Collections of their Qualities, are all inadequate.

§. 8. Secondly, THOSE who, neglecting that useless Supposition of unknown, real Essences, whereby they are distinguished, endeavour to copy the Substances that exist in the World, by putting together the *Ideas* of those sensible Qualities, which are found co-existing in them, tho' they come much nearer a Likeness of them, than those, who imagine they know not what, real; specific Essences; yet they arrive not at perfectly adequate *Ideas* of those Substances, they would thus copy into their Minds; nor do those Copies exactly and fully contain all that is to be found in their Archetypes. Because those Qualities, and Powers of Substances, whereof we make their complex *Ideas*, are so many and various, that no Man's complex *Idea* contains them all. That our abstract *Ideas* of Substances do not contain in them all the simple *Ideas*, that are united in the Things themselves, is evident, in that Men do rarely put into their complex *Idea* of any Substance, all the simple *Ideas* they do know to exist in it: Because, endeavouring to make the Signification of their specific Names as clear and as little cumbersome as they can, they make their specific *Ideas* of the Sorts of Substances, for the most Part, of a few of those simple *Ideas*, which are to be found in them: But these, having no original Precedency, or Right to be put in, and make the specific *Idea*, more than others that are left out, 'tis plain, that both

both these Ways, our *Ideas of Substances* are deficient and *inadequate*. The simple *Ideas*, whereof we make our complex ones of Substances, are all of them (bating only the Figure and Bulk of some Sorts) Powers, which being Relations to other Substances, we can never be sure that we know all the Powers that are in any one Body, till we have tried what Changes it is fitted to give to, or receive, from other Substances, in their several Ways of Application: Which being impossible to be tried upon any one Body, much less upon all, it is impossible we should have adequate *Ideas* of any Substance, made up of a Collection of all its Properties.

§. 9. WHOSEVER first light on a Parcel of that Sort of Substance, we denote by the Word *Gold*, could not rationally take the Bulk and Figure he observed in that Lump, to depend on its real Essence, or internal Constitution. Therefore, those never went into his *Idea* of that Species of Body; but its peculiar Colour, perhaps, and Weight, were the first he abstracted from it, to make the complex *Idea* of that Species. Which both are but Powers; the one to affect our Eyes after such a Manner, and to produce in us that *Idea* we call Yellow; and the other to force upwards any other Body of equal Bulk, they being put into a Pair of equal Scales, one against another. Another, perhaps, added to these, the *Ideas* of Fusibility and Fixedness, two other passive Powers, in relation to the Operation of Fire upon it; another, its Ductility and Solubility in *Aq. Regia*, two other Powers, relating to the Operation of other Bodies, in changing its outward Figure, or Separation of it into insensible Parts. These, or part of these, put together, usually make the complex *Idea* in Mens Minds, of that Sort of Body we call *Gold*.

§. 10. BUT no one, who hath consider'd the Properties of Bodies in general, or this Sort in particular, can doubt, that this called *Gold*, has infinite other Properties, not contained in that complex *Idea*. Some, who have examined this Species more accurately, could, I believe, enumerate ten times as many Properties in *Gold*, all of them as inseparable from its internal Constitution, as its Colour, or Weight: And, 'tis probable, if any one knew all the Properties, that are by divers Men known

of this Metal, there would an hundred times as many *Ideas* go to the complex *Idea of Gold*, as any one Man yet has in his : And yet, perhaps, that not be the thousandth Part of what is to be discovered in it. The Changes, which that one Body is apt to receive, and make in other Bodies, upon a due Application, exceeding far, not only what we know, but what we are apt to imagine. Which will not appear so much a Paradox to any one, who will but consider how far Men are yet from knowing all the Properties of that one, no very compound Figure, *a Triangle*; tho' it be no small Number, that are already by Mathematicians discovered of it.

Ideas of Substances, as Collections of their Qualities, are all inadequate. §. 11. So that all our complex Ideas of *Substances* are imperfect and inadequate. Which would be so also in Mathematical Figures, if we were to have our complex *Ideas* of them, only by collecting their Properties in Reference to other Figures. How uncertain and imperfect would our *Ideas* be of an *Ellipsis*, if we had no other *Idea* of it, but some few of its Properties? Whereas, having in our plain *Idea* the whole Essence of that Figure, we from thence discover those Properties, and demonstratively see how they flow, and are inseparable from it.

Simple Ideas ειναι, and adequate. §. 12. THUS the Mind has three Sorts of abstract *Ideas*, or nominal Essences. First, SIMPLE Ideas, which are ειναι, or Copies; but yet certainly adequate. Because, being intended to express nothing but the Power in Things to produce in the Mind such a Sensation, that Sensation, when it is produced, cannot but be the Effect of that Power. So the Paper I write on, having the Power, in the Light, (I speak according to the common Notion of Light,) to produce in me the Sensation, which I call White, it cannot but be the Effect of such a Power, in something without the Mind; since the Mind has not the Power to produce any such *Idea* in itself, and being meant for nothing else, but the Effect of such a Power, that simple *Idea* is real and adequate. The Sensation of White, in my Mind, being the Effect of that Power, which is in the Paper to produce it, is perfectly

perfectly *adequate* to that Power; or else, that Power would produce a different *Idea*.

§. 13. *Secondly, THE complex Ideas of Substances are Ectypes, or Copies too; but not perfect ones, nor adequate:* Which is very evident to the Mind, in that it plainly perceives, that, whatever Collection of simple *Ideas* it makes of any Substance that exists, it cannot be sure, that it exactly answers all that are in that Substance: Since, not having tried all the Operations, of all other Substances upon it, and found all the Alterations it would receive from, or cause in other Substances, it cannot have an exact, *adequate*, complex *Idea* of the Powers of any Substance existing, and its Relations, which is that Sort of complex *Idea* of Substances we have. And, after all, if we could have, and actually had, in our complex *Idea*, an exact Collection of all the secondary Qualities, or Powers of any Substance, we should not yet thereby have an *Idea* of the Essence of that Thing. For since the Powers, or Qualities, that are observable by us, are not the real Essence of that Substance, but depend on it, and flow from it, any Collection whatsoever of these Qualities, cannot be the real Essence of that Thing. Whereby it is plain, that our *Ideas* of Substances are not *adequate*; are not what the Mind intends them to be. Besides, a Man has no *Idea* of Substance in general, nor know what Substance is in itself.

§. 14. *Thirdly, COMPLEX Ideas of Modes and Relations, are Originals, and Archetypes, are not Copies, nor made after the Pattern of any real Existence, to which the Mind intends them to be conformable, and exactly to answer.* These being such Collections of simple *Ideas*, that the Mind itself puts together, and such Collections, that each of them contains in it precisely all that the Mind intends it should, they are Archetypes and Essences of Modes that may exist, and so are designed only for, and belong only to such Modes, as when they do exist, have an exact Conformity with those complex *Ideas*. The *Ideas*, therefore, of Modes and Relations, cannot but be *adequate*.

Ideas of Substances are ἔχυπα, inadequate.

Ideas of Modes and Relations, are Archetypes, and cannot but be adequate.

C H A P. XXXII.

Of True and False Ideas.

*Truth and
Falshood pro-
perly belong to
Propositions.*

§. 1. THO' Truth and Falshood belong, in Propriety of Speech, only to Propositions; yet Ideas are often-times termed *True*, or *False*, (as what Words are there that are not used with great Latitude, and with some Deviation from their strict and proper Significations? Tho', I think, that when Ideas themselves are termed true, or false, there is still some secret, or tacit Proposition, which is the Foundation of that Denomination; as we shall see, if we examine the particular Occasions, wherein they come to be called true, or false. In all which we shall find some kind of Affirmation, or Negation, which is the Reason of that Denomination. For our Ideas, being nothing but bare Appearances, or Perceptions in our Minds, cannot properly and simply in themselves be said to be *true*, or *false*, no more than a single Name of any Thing can be said to be *true*, or *false*.

*Metaphysica!
Truth contains
a tacit Pro-
position.*

§. 2. INDEED, both Ideas and Words may be said to be *true*, in a metaphysical Sense, of the Word *Truth*, as all other Things, that any way exist, are said to be *true*; i. e. really to be such as they exist. Tho', in Things called *true*, even in that Sense, there is, perhaps, a secret Reference to our Ideas, look'd upon as the Standards of that *Truth*, which amounts to a mental Proposition, tho' it be usually not taken Notice of.

*No Idea, as an
Appearance in
the Mind, true,
or false.*

§. 3. But it is not in that Metaphysical Sense of Truth, which we enquire here, when we examine, whether our Ideas are capable of being *true*, or *false*; but in the more ordinary Acceptation of those Words: And so I say, that the Ideas in our Minds, being only so many Perceptions, or Appearances there, none of them are *false*; the Idea of a Centaur having

having no more Falshood in it, when it appears in our Minds, than the Name Centaur has Falshood in it, when it is pronounced by our Mouths, or written on Paper. For Truth, or Falshood, lying always in some Affirmation, or Negation, Mental, or Verbal, our *Ideas* are not capable, any of them, of being false, till the Mind passes some Judgment on them; that is, affirms, or denies something of them.

§. 4. WHENEVER the Mind refers any of its Ideas to any Thing extraneous to them, they are then capable to be called true, or false. Because the Mind, in such a Reference, makes a tacit Supposition of their Conformity to that Thing: Which Supposition, as it happens to be true, or false, so the Ideas themselves come to be denominated. The most usual Cases wherein this happens, are these following:

§. 5. First, WHEN the Mind supposes any Idea it has, conformable to that in other Mens Minds, called by the same common Name; v.g. when the Mind intends, or judges its Ideas of *Justice, Temperance, Religion*, to be the same with what other Men give those Names to.

Ideas, referred to any Thing, may be true, or false.

Other Mens Ideas, real Existence, and supposed real Essences, are what Men usually refer their Ideas to.

Secondly, WHEN the Mind supposes any Idea it has in itself, to be conformable to some real Existence. Thus the two Ideas of a Man, and a Centaur, supposed to be the Ideas of real Substances, are the one true, and the other false; the one having a Conformity to what has really existed, the other not.

Thirdly, WHEN the Mind refers any of its Ideas to that real Constitution, and Essence of any Thing, whereon all its Properties depend: And thus the greatest Part, if not all our Ideas of Substances, are false.

§. 6. THESE Suppositions the Mind is very apt tacitly to make, concerning its own Ideas. But yet, if we will examine it, we shall find it is chiefly, if not only, concerning its abstract, complex Ideas. For the natural Tendency of the Mind being towards Knowledge; and finding that, if it should proceed by, and dwell up-

The Cause of such References.

on only particular Things, its Progress would be very slow, and its Work endless: Therefore, to shorten its Way to Knowledge, and make each Perception the more comprehensive; the first Thing it does, as the Foundation of the easier enlarging its Knowledge, either by Contemplation of the Things themselves, that it would know, or Conference with others about them, is to bind them into Bundles, and rank them so into Sorts, that what Knowledge it gets of any of them, it may thereby, with Assurance, extend to all of that Sort; and so advance by larger Steps in that, which is its great Busines, Knowledge. This, as I have elsewhere shewn, is the Reason why we collect Things under comprehensive *Ideas*, with Names annexed to them, into *Genera* and *Species*, i. e. into Kinds and Sorts.

§. 7. If, therefore, we will warily attend to the Motions of the Mind, and observe what Course it usually takes, in its Way to Knowledge, we shall, I think, find, that the Mind, having got any *Idea*, which it thinks it may have Use of, either in Contemplation, or Discourse, the first Thing it does, is to abstract it, and then get a Name to it; and so lay it up in its Store-houſe, the Memory, as containing the Essence of a Sort of Things, of which that Name is always to be the Mark. Hence it is, that we may often observe, that when any one sees a new Thing of a Kind, that he knows not, he presently asks what it is, meaning by that Enquiry, nothing but the Name. As if the Name carried with it the Knowledge of the Species, or the Essence of it; whereof it is, indeed, used as the Mark, and it is generally supposed annexed to it.

*The Cause of
such Refer-
ences.*

§. 8. But this abstract *Idea* being something in the Mind between the Thing that exists, and the Name that is given it; it is in our *Ideas*,

that both the Rightness of our Knowledge, and the Propriety, or Intelligibleness of our Speaking, consists. And hence it is, that Men are so forward to suppose, that the abstract *Ideas*, they have in their Minds, are such as agree to the Things existing without them, to which they are referred; and are the same also, to which the Names they give them, do, by the Use and Propriety of that Language, belong. For without this

double

double Conformity of their *Ideas*, they find they should both think amiss of Things themselves, and talk of them unintelligibly to others.

§. 9. First, THEN, I say, That when the Truth of our Ideas is judged of, by the Conformity they have to the Ideas which other Men have, and commonly signify by the same Name, they may be any of them false. But yet, simple Ideas are least of all liable to be so mistaken: Because a Man, by his Senses, and every Day's Observation, may easily satisfy himself, what the simple Ideas are, which their several Names, that are in common Use, stand for; they being but few in Number, and such, as if he doubts, or mistakes in, he may easily, rectify by the Objects they are to be found in. Therefore it is seldom that any one mistakes, in his Names of simple Ideas; or applies the Name Red, to the Idea of Green; or the Name Sweet, to the Idea Bitter: Much less are Men apt to confound the Names of Ideas, belonging to different Senses; and call a Colour by the Name of a Taste, &c. whereby it is evident, that the simple Ideas they call by any Name, are commonly the same that others have, and mean, when they use the same Names.

§. 10. COMPLEX Ideas are much more liable to be false, in this respect; and the complex Ideas of mixed Modes, much more than those of Substances: Because in Substances, (especially those, which the common and unborrowed Names of any Language are applied to) some remarkable, sensible Qualities, serving ordinarily to distinguish one Sort from another, easily preserve those, who take any Care in the Use of their Words, from applying them to Sorts of Substances, to which they do not at all belong. But in mixed Modes, we are much more uncertain; it being not so easy to determine of several Actions, whether they are to be called *Justice*, or *Cruelty*; *Liberality*, or *Prodigality*. And so, in referring our Ideas to those of other Men, called by the same Names, ours may be false; and the Idea in our Minds, which we express by the Word *Justice*, may, perhaps, be that, which ought to have another Name.

Simple Ideas
may be false, in
Reference to
others of the
same Name,
but are least
liable to be so.

Ideas of mixed
Modes most li-
able to be false,
in this Sense.

*Or at least to
be thought
false;*

§. 11. But whether, or no, our *Ideas* of mixed Modes are more liable, than any Sort, to be different from those of other Men, which are marked by the same Names; this, at least, is certain, That *this sort of Falshood, is much more familiarly attributed to our Ideas of mixed Modes, than to any other:* When a Man is thought to have a false *Idea* of *Justice*, or *Gratitude*, or *Glory*, it is for no other Reason, but that his agrees not with the *Ideas*, which each of those Names are the Signs of in other Men.

§. 12. THE Reason whereof seems to me to be
And why.

this, That the abstract *Ideas* of mixed Modes, being Mens voluntary Combinations of such a precise Collection of simple *Ideas*; and so the Essence of each Species, being made by Men alone, whereof we have nother sensible Standard, existing any where, but the Name itself, or the Definition of that Name; we have nothing else to refer these our *Ideas* of mixed Modes to, as a Standard, to which we would conform them, but the *Ideas* of those, who are thought to use those Names, in their most proper Significations; and so, as our *Ideas* conform, or differ from them, they pass for true, or false. And thus much concerning the *Truth* and *Falshood* of our *Ideas*, in Reference to their Names.

*As referred to
real Existences,
none of our I-
deas can be
false, but those
of Substances.*

*First, Simple
Ideas in this
Sense not false,
and why.*

§. 13. Secondly, As to the *Truth* and *Falshood* of our *Ideas*, in reference to the real Existence of Things, when that is made the Standard of their *Truth*, none of them can be termed false, but only our complex *Ideas* of Substances.

§. 14. First, OUR simple *Ideas* being barely such Perceptions, as God has fitted us to receive, and given Power to external Objects to produce in us, by establish'd Laws, and Ways, suitable to His Wisdom and Goodness, tho' incomprehensible to us, their Truth consists in nothing else but in such Appearances, as are produced in us, and must be suitable to those Powers He has placed in external Objects, or else they could not be produced in us: And thus answering those Powers, they are what they should

should be, *true Ideas*. Nor do they become liable to any Imputation of *Falshood*, if the Mind (as in most Men I believe it does) judges these *Ideas* to be in the Things themselves. For God, in His Wisdom, having set them as Marks of Distinction in Things, whereby we may be able to discern one Thing from another, and so chuse any of them for our Uses, as we have Occasion, it alters not the Nature of our simple *Idea*, whether we think, that the *Idea* of Blue be in the Violet itself, or in our Mind only; and only the Power of producing it by the Texture of its Parts, reflecting the Particles of Light, after a certain Manner, to be in the Violet itself. For that Texture in the Object, by a regular and constant Operation, producing the same *Idea* of Blue in us, it serves us to distinguish, by our Eyes, that from any other Thing, whether that distinguished Mark, as it is really in the *Violet*, be only a peculiar Texture of Parts, or else that very Colour, the *Idea* whereof (which is in us) is the exact Resemblance. And it is equally from that Appearance to be denominated *Blue*, whether it be that real Colour, or only a peculiar Texture in it, that causes in us that *Idea*: Since the Name *Blue* notes properly nothing, but that Mark of Distinction that is in a *Violet*, discernible only by our Eyes, whatever it consists in, that being beyond our Capacities distinctly to know, and, perhaps, would be of less Use to us, if we had Faculties to discern it.

§. 15. NEITHER would it carry any Imputation of *Falshood* to our simple *Ideas*, if, by the different Structure of our Organs, it were so ordered, That the same Object should produce in several Mens Minds different Ideas at the same time; v. g. if the *Idea*, that a *Violet* produc'd in one Man's Mind by his Eyes, were the same that a *Marigold* produc'd in another Man's, and vice versa. For since this could never be known, because one Man's Mind could not pass into another Man's Body, to perceive what Appearances were produced by those Organs; neither the *Ideas* hereby, nor the Names would be at all confounded, or any *Falshood* be in either. For all Things that had the Texture of a *Violet*, producing constantly the *Idea* which

*The' one Man's
Idea of Blue
should be dif-
ferent from an-
other's.*

he called *Blue*; and those which had the Texture of a *Marigold*, producing constantly the *Idea* which he has constantly call'd *Yellow*; whatever those Appearances were in his Mind, he would be able, as regularly, to distinguish Things for his Use, by those Appearances, and understand and signify those Distinctions, mark'd by the Names *Blue* and *Yellow*, as if the Appearances, or *Ideas* in his Mind, receiv'd from those two Flowers, were exactly the same with the *Ideas* in other Men's Minds. I am, nevertheless, very apt to think, that the sensible *Ideas*, produc'd by any Object, in different Mens Minds, are most commonly very near and undiscernibly alike. For which Opinion, I think, there might be many Reasons offer'd; but that being besides my present Busines, I shall not trouble my Reader with them; but only mind him, that the contrary Supposition, if it could be proved, is of little Use, either for the Improvement of our Knowledge, or Conveniency of Life; and so we need not trouble ourselves to examine it.

First, simple Ideas in this Sense not false, and why. §. 16. FROM what has been said, concerning our simple *Ideas*, I think it evident, that our simple *Ideas* can none of them be false, in respect of *Things* existing without us. For the Truth

of these Appearances, or Perceptions in our Minds, consisting, as has been said, only in their being answerable to the Powers in external Objects, to produce by our Senses such Appearances in us; and each of them being in the Mind, such as it is, suitable to the Power that produced it, and which alone it represents; it cannot upon that Account, or as refer'd to such a Pattern, be false. *Blue* and *Yellow*, *Bitter*, or *Sweet*, can never be false *Ideas*; these Perceptions in the Mind are just such as they are there, answering the Powers appointed by God to produce them; and so are truly what they are, and are intended to be. Indeed the Names may be misapply'd, but that, in this respect, makes no Falshood in the *Ideas*: As if a Man, ignorant in the *English Tongue*, should call *Purple*, *Scarlet*.

Secondly, Modes not false. §. 17. Secondly, NEITHER can our complex Ideas of Modes, in reference to the Essence of any Thing

Thing really existing, be false: Because whatever complex Idea I have of any Mode, it hath no reference to any Pattern existing, and made by Nature: It is not supposed to contain in it any other *Ideas* than what it hath; nor to represent any Thing but such a Complication of *Ideas* as it does. Thus, when I have the *Idea* of such an Action of a Man, who forbears to afford himself such Meat, Drink, and Cloathing, and other Conveniences of Life, as his Riches and Estate would be sufficient to supply, and his Station requires, I have no *false Idea*; but such an one as represents an Action, either as I find, or imagine it; and so is capable of neither *Truth*, or *Falshood*. But when I give the Name *Frugality*, or *Virtue*, to this Action, then it may be called a *false Idea*, if thereby it be supposed to agree with that *Idea*, to which, in Propriety of Speech, the Name of *Frugality* doth belong; or to be conformable to that Law, which is the Standard of *Virtue* and *Vice*.

§. 18. *Thirdly, Our complex Ideas of Substances, being all referr'd to Patterns in Things themselves, may be false.* That they are all *false*, when look'd upon as the Representations of the unknown Essences of Things, is so evident, that there needs nothing to be said of it. I shall therefore pass over that chimerical Supposition, and consider them as Collections of simple *Ideas* in the Mind, taken from Combinations of simple *Ideas*, existing together constantly in Things, of which Patterns they are the supposed Copies; and in this reference of them, to the Existence of Things, they are *false Ideas*. 1. When they put together simple *Ideas*, which in the real Existence of Things have no Union; as when to the Shape and Size, that exist together in a Horse, is join'd in the same complex *Idea*, the Power of barking like a Dog: Which three *Ideas*, however put together into one in the Mind, were never united in Nature; and this, therefore, may be called a *false Idea* of an Horse. 2. Ideas of Substances are, in this respect, also *false*, when, from any Collection of simple *Ideas*, that do always exist together, there is separated, by a direct Negation, any other simple *Idea*, which is constantly join'd with them. Thus, if to Extension, Solidity, Fissility,

Thirdly, Ideas of Substances, when false.

Fusibility, the peculiar Weightiness, and yellow Colour of Gold, any one join, in his Thoughts, the Negation of a greater degree of Fixedness than is in Lead, or Copper, he may be said to have a false, complex *Idea*, as well as when he joins, to those other simple ones, the *Idea* of perfect, absolute Fixedness. For either way, the complex *Idea* of Gold, being made up of such simple ones, as have no Union in Nature, may be term'd *false*. But, if he leave out of this his complex *Idea*, that of Fixedness quite, without either actually joining to, or separating of it from the rest in his Mind, it is, I think, to be look'd on as an inadequate and imperfect *Idea*, rather than a *false* one; since, tho' it contains not all the simple *Ideas* that are united in Nature, yet it puts none together but what do really exist together.

Truth, or Falsehood, always supposes Affirmation, or Negation.

§. 19. THO', in compliance with the ordinary way of speaking, I have shew'd in what Sense, and upon what Ground, our *Ideas* may be sometimes called *true*, or *false*; yet if we will look a little nearer into the Matter, in all Cases, where any *Idea* is called *true*, or *false*, it is from some Judgment that the Mind makes, or is supposed to make, that is *true*, or *false*. For *Truth*, or *Falshood*, being never without some *Affirmation*, or *Negation*, express, or tacit, it is not to be found but where Signs are joined, or separated, according to the Agreement, or Disagreement of the Things they stand for. The Signs we chiefly use are either *Ideas*, or *Words*, wherewith we make either mental, or verbal Propositions. *Truth* lies in so joining, or separating these Representatives, as the Things, they stand for, do in themselves agree, or disagree; and *Falshood* in the contrary, as shall be more fully shew'd hereafter.

Ideas, in themselves, neither true, nor false.

§. 20. ANY *Idea* then, which we have in our Minds, whether conformable, or not, to the Existence of Things, or to any *Ideas* in the Minds of other Men, cannot properly for this alone be called *false*: For these Representations, if they have nothing in them, but what is really existing in Things without, cannot be thought *false*, being exact Representations of something; nor yet, if they have any thing in them differing from the reality

ty of Things, can they properly be said to be false Representations, or *Ideas* of Things they do not represent. But the Mistake and *Falshood* is,

§. 21. First, WHEN the Mind, having any Idea, it judges and concludes it the same that is in other Mens Minds, signified by the same Name; or that it is conformable to the ordinary, receiv'd Signification, or Definition of that Word, when indeed it is not; which is the most usual Mistake in mix'd Modes, tho' other Ideas also are liable to it.

*But are false,
First, when
judged agree-
able to another
Man's Idea,
without being
so.*

§. 22. Secondly, WHEN it having a complex Idea, made up of such a Collection of simple ones, as Nature never puts together, it judges it to agree, to a Species of Creatures, really existing; as when it joins the Weight of Tin, to the Colour, Fusibility, and Fixednes of Gold.

*Secondly, when
judged to agree
to real Exist-
ence, when they
do not.*

§. 23. Thirdly, WHEN, in its complex Idea, it has united a certain Number of simple Ideas, that do really exist together in some sorts of Creatures, but has also left out others, as much inseparable, it judges this to be a perfect, complete Idea of a sort of Things, which really it is not; v. g. having joined the Ideas of Substance, yellow, malleable, most heavy, and fusible, it takes that complex Idea to be the complete Idea of Gold, when yet its peculiar Fixedness and Solubility in *Aqua Regia*, are as inseparable from those other Ideas, or Qualities of that Body, as they are one from another.

*Thirdly, when
judged ade-
quate, without
being so.*

§. 24. Fourthly, THE Mistake is yet greater, when I judge that this complex Idea, contains in it the real Essence of any Body existing; when at least it contains but some few of those Properties, which flow from its real Essence and Constitution. I say, only some few of those Properties; for those Properties consisting mostly in the active and passive Powers it has, in reference to other Things, all that are vulgarly known of any one Body, and of which the complex Idea of that kind of Things is usually made, are but a very few, in comparison of what a Man, that has several ways tried and examined it, knows of that one sort of Things; and all that

*Fourthly, when
judged to repre-
sent the real Ef-
fence.*

that the most expert Man knows, are but few, in comparison of what are really in that Body, and depend on its internal, or essential Constitution. The Essence of a Triangle lies in a very little Compafs, consists in a very few *Ideas*; three Lines, including a Space, make up that Essence: But the Properties, that flow from this Essence, are more than can be easily known, or enumerated. So I imagine it is in Substances, their real Essences lie in a little Compafs; tho' the Properties flowing from that internal Constitution are endless.

Ideas, when false. §. 25. To conclude: A Man having no Notion of any Thing without him, but by the *Idea*

he has of it in his Mind (which *Idea* he has a Power to call by what name he pleases) he may, indeed, make an *Idea* neither answering the Reason of Things, nor agreeing to the *Ideas* commonly signified by other Peoples Words; but cannot make a wrong, or false *Idea* of a Thing, which is no otherwise known to him, but by the *Idea* he has of it: V. g. when I frame an *Idea* of the Legs, Arms, and Body of a Man, and join to this a Horse's Head and Neck, I do not make a *false Idea* of any thing; because it represents nothing without me: But when I call it a *Man*, or *Tartar*, and imagine it either to represent some real Being without me, or to be the same *Idea* that others call by the same Name; in either of these Cases I may err: And, upon this account it is, that it comes to be term'd a *false Idea*; tho' indeed the *Falshood* lies not in the *Idea*, but in that tacit, mental Proposition, wherein a Conformity and Resemblance is attributed to it, which it has not. But yet, if having framed such an *Idea* in my Mind, without thinking either that Existence, or the Name *Man*, or *Tartar*, belongs to it, I will call it *Man*, or *Tartar*, I may be justly thought fantastical in the naming, but not erroneous in my Judgment, nor the *Idea* any way *false*.

More properly to be called right, or wrong. §. 26. UPON the whole Matter, I think, that our *Ideas*, as they are consider'd by the Mind, either in reference to the proper Signification of their Names, or in reference to the reality of Things, may very fitly be called *right*, or *wrong* Ideas, according as they agree, or disagree, to those Patterns, to which they are referred:

ferred: But if any one had rather call them *true*, or *false*, it is fit he use a Liberty, which every one has, to call Things by those Names he thinks best; tho' in Propriety of Speech, *Truth*, or *Falshood* will, I think, scarce agree to them, but as they, some way or other, virtually contain in them some mental Proposition. The *Ideas*, that are in a Man's Mind, simply consider'd, cannot be wrong, unless complex ones, wherein inconsistent Parts are jumbled together. All other *Ideas* are in themselves right, and the Knowledge about them right and true Knowledge: But when we come to refer them to any Thing, as to their Patterns and Archetypes, then they are capable of being wrong, as far as they disagree with such Archetypes.

C H A P. XXXIII.

Of the Association of Ideas.

§. 1. **T**H E R E is scarce any one that does not observe something that seems odd to him, and is in itself really extravagant in the Opinions, Reasonings, and Actions of other Men. The least Flaw of this kind, if at all different from his own, every one is quick-sighted enough to espy in another, and will, by the Authority of Reason, forwardly condemn, tho' he be guilty of much greater Unreasonableness in his own Tenets and Conduct, which he never perceives, and will very hardly, if at all, be convinced of.

§. 2. THIS proceeds not wholly from Self-love, tho' that has often a great hand in it. Men of fair Minds, and not given up to the over-weaning of Self-flattery, are frequently guilty of it: And in many Cases, one with Amazement hears the Arguings, and is astonish'd at the Obslinacy of a worthy Man, who yields not to the Evidence of Reason, tho' laid before him as clear as Day-light.

§. 3. THIS sort of Unreasonableness is usually imputed to Education and Prejudice, and for the most part truly enough, tho' that reaches not

Something unreasonable in most Men.

Not wholly from Self-love;

Nor from Education.

the bottom of the Disease, nor shews distinctly enough whence it rises, or wherein it lies. Education is often rightly assigned for the Cause, and Prejudice is a good general Name for the Thing itself ; but yet, I think, he ought to look a little farther, who would trace this sort of Madness to the Root it springs from, and so explain it, as to shew, whence this Flaw has its Original, in very sober and rational Minds, and wherein it consists.

*A degree of
Madness.*

§. 4. I SHALL be pardon'd for calling it by so harsh a Name as *Madness*, when it is considered, that Opposition to Reason deserves that Name, and is really Madness ; and there is scarce a Man so free from it, but that, if he should always, on all Occasions, argue, or do, as in some Cases he constantly does, would not be thought fitter for *Bedlam*, than civil Conversation. I do not here mean, when he is under the Power of an unruly Passion, but in the steady, calm Course of his Life. That which will yet more apologize for this harsh Name, and ungrateful Imputation on the greatest Part of Mankind, is, that enquiring a little by the bye into the Nature of Madness, B. II. C. XI. §. 13. I found it to spring from the very same Root, and depend on the very same Cause, we are here speaking of. This Consideration of the Thing itself, at a time when I thought not the least on the Subject, which I am now treating of, suggested it to me. And if this be a Weakness, to which all Men are so liable ; if this be a Taint, which so universally infects Mankind, the greater Care should be taken to lay it open, under its due Name, thereby to excite the greater Care in its Prevention and Cure.

From a wrong Connexion of Ideas. §. 5. SOME of our *Ideas* have a natural Correspondence and Connexion one with another : It is the Office and Excellency of our Reason to

trace these, and hold them together, in that Union and Correspondence, which is founded in their peculiar Beings. Besides this, there is another Connexion of *Ideas*, wholly owing to Chance, or Custom : *Ideas*, that in themselves are not at all of kin, come to be so united in some Mens Minds, that it is very hard to separate them, they always keep in Company, and the one no sooner, at any time, comes into the Understanding,

ing, but its Associate appears with it; and if they are more than two, which are thus united, the whole Gang, always inseparable, shew themselves together.

§. 6. THIS strong Combination of *Ideas*, not
ally'd by Nature, the Mind makes in itself, ei- *This Connexion,
how made.*
ther voluntarily, or by chance; and hence it
comes in different Men to be very different, according to their
different Inclinations, Educations, Interests, &c. Custom settles
Habits of thinking in the Understanding, as well as of determin-
ing in the Will, and of Motions in the Body; all which seems
to be but Trains of Motion in the Animal Spirits, which, once set
a going, continue in the same Steps they have been used to;
which, by often treading, are worn into a smooth Path, and the
Motion in it becomes easy, and, as it were, natural. As far as
we can comprehend Thinking, thus *Ideas* seem to be produced
in our Minds; or, if they are not, this may serve to explain their
following one another, in an habitual Train, when once they are
put into that Tract, as well as it does to explain such Motions
of the Body. A Musician used to any Tune, will find, that let
it but once begin in his Head, the *Ideas* of the several Notes of
it will follow one another orderly in his Understanding, with-
out any Care, or Attention, as regularly as his Fingers move or-
derly over the Keys of the Organ to play out the Tune he has
begun, tho' his unattentive Thoughts be elsewhere a wandring.
Whether the natural Cause of these *Ideas*, as well as of that re-
gular dancing of his Fingers, be the Motion of his Animal Spirits,
I will not determine, how probable soever, by this Instance, it
appears to be so; but this may help us a little to conceive of in-
tellectual Habits, and of the tying together of *Ideas*.

§. 7. THAT there are such Associations of
them, made by Custom in the Minds of most
Men, I think, no Body will question, who has
well consider'd himself, or others; and to this,
perhaps, might be justly attributed most of the Sympathies and
Antipathies observable in Men, which work as strongly, and pro-
duce as regular Effects, as if they were natural, and are, there-
fore, called so, tho' they at first had no other Original but the

*Some Antipa-
thies an Effect
of it.*

accidental Connexion of two *Ideas*, which either the Strength of the first Impression, or future Indulgence so united, that they always afterwards kept company together in that Man's Mind, as if they were but one *Idea*. I say, most of the Antipathies, I do not say all, for some of them are truly natural, depend upon our original Constitution, and are born with us; but a great part of those, which are counted natural, would have been known to be from unheeded, tho', perhaps, early Impressions, or wanton Fancies at first, which would have been acknowledg'd the Original of them, if they had been warily observ'd. A grown Person surfeiting with Honey, no sooner hears the Name of it, but his Fancy immediately carries Sicknes and Qualms to his Stomach, and he cannot bear the very *Idea* of it; other *Ideas* of Dislike, and Sicknes, and Vomiting, presently accompany it, and he is disturb'd, but he knows from whence to date this Weaknes, and can tell how he got this Indisposition. Had this happen'd to him by an Over-dose of Honey, when a Child, all the same Effects would have followed, but the Cause would have been mistaken, and the Antipathy counted natural.

§. 8. I MENTION this, not out of any great necessity there is in this present Argument, to distinguish nicely between natural and acquir'd Antipathies; but I take notice of it for another Purpose, (*viz.*) that those, who have Children, or the Charge of their Education, would think it worth their while diligently to watch, and carefully to prevent the undue Connexion of *Ideas* in the Minds of young People. This is the time most susceptible of lasting Impressions; and tho' those, relating to the Health of the Body, are by discreet People minded and fenced against, yet I am apt to doubt, that those, which relate more peculiarly to the Mind, and terminated in the Understanding, or Passions, have been much less heeded than the Thing deserves; nay, those relating purely to the Understanding, have, as I suspect, been by most Men wholly overlook'd.

*A great Cause
of Errors.*

§. 9. THIS wrong Connexion in our Minds, of *Ideas*, in themselves, loose and independent one of another, has such an Influence, and is of so great Force to set us awry in our Actions, as well moral, as natural,

natural, Passions, Reasonings, and Notions themselves, that, perhaps, there is not any one Thing that deserves more to be look'd after.

§. 10. THE Ideas of *Goblins* and *Sprites*, Instances.

have really no more to do with Darkness, than

Light; yet let but a foolish Maid inculcate these often on the Mind of a Child, and raise them there together, possibly he shall never be able to separate them again so long as he lives ; but Darkness shall ever afterwards bring with it those frightful Ideas, and they shall be so joined, that he can no more bear the one than the other.

§. 11. A MAN receives a sensible Injury from another, thinks on the Man and that Action over and over ; and by ruminating on them strongly, or much in his Mind, so cements those two Ideas together, that he makes them almost one ; never thinks on the Man, but the Pain and Displeasure, he suffered, comes into his Mind with it, so that he scarce distinguishes them, but has as much an Aversion for the one as the other. Thus Hatreds are often begotten, from slight and almost innocent Occasions, and Quarrels propagated and continued in the World.

§. 12. A MAN has suffered Pain, or Sickness, in any Place, he saw his Friend die in such a Room ; tho' these have in Nature nothing to do one with another, yet, when the Idea of the Place occurs to his Mind, it brings (the Impression being once made) that of the Pain and Displeasure with it ; he confounds them in his Mind, and can as little bear the one as the other.

§. 13. WHEN this Combination is settled, and while it lasts, it is not in the Power of Reason to help us, and relieve us from the Effects of it. Ideas in our Minds, when they are there, will operate according to their Natures and Circumstances ; and here we see the Cause why Time cures certain Affections, which Reason, tho' in the right, and allowed to be so, has not Power over, nor is able against them to prevail with those, who are apt to hearken to it in other Cases. The Death of a Child, that was the daily Delight of his Mother's Eyes, and

*Why Time
cures some Dis-
orders in the
Mind, which
Reason cannot.*

Joy

Joy of her Soul, rends from her Heart with the whole Comfort of her Life, and gives her all the Torment imaginable : Use the Consolations of Reason in this Case, and you were as good preach Ease to one on the Rack, and hope to allay, by rational Discourses, the Pain of his Joints, tearing asunder. Till Time has, by Disuse, separated the Sense of that Enjoyment, and its Loss, from the *Idea* of the Child returning to her Memory, all Representations, tho' ever so reasonable, are in vain ; and, therefore, some, in whom the Union between these *Ideas* is never dissolved, spend their Lives in Mourning, and carry an incurable Sorrow to their Graves.

Farther Instances of the Effects of the Association of Ideas.

§. 14. A FRIEND of mine knew one perfectly cured of Madness by a very harsh and offensive Operation. The Gentleman, who was thus recovered, with great Sense of Gratitude and Acknowledgment, own'd the Cure all his

Life after, as the greatest Obligation he could have receiv'd ; but, whatever Gratitude and Reason suggested to him, he could never bear the Sight of the Operator : That Image brought back with it the *Idea* of that Agony, which he suffered from his Hands, which was too mighty and intollerable for him to endure.

§. 15. MANY Children imputing the Pain, they endured at School, to their Books they were corrected for, so join those *Ideas* together, that a Book becomes their Aversion, and they are never reconciled to the Study and Use of them all their Lives after ; and thus Reading becomes a Torment to them, which otherwise, possibly, they might have made the great Pleasure of their Lives. There are Rooms convenient enough, that some Men cannot study in, and Fashions of Vessels, which, tho' ever so clean, and commodious, they cannot drink out of, and that, by Reason of some accidental *Ideas* which are annexed to them, and make them offensive : And who is there that hath not observed some Man to flag at the Appearance, or in the Company of some certain Person, not otherwise superior to him, but because having once, on some Occasion, got the Ascendant, the *Idea* of Authority and Distance goes along with that

that of the Person? And he, that has been thus subjected, is not able to separate them.

§. 16. INSTANCES of the Kind are so plentiful every where, that, if I add one more, it is only for the pleasant Oddness of it. It is of a young Gentleman, who having learned to dance, and that to great Perfection, there happened to stand an old Trunk in the Room where he learned. The *Idea* of this remarkable Piece of Household-stuff, had so mixed itself with the Turns and Steps of all his Dances, that, tho' in that Chamber he could dance excellently well, yet it was only whilst that Trunk was there; nor could he perform well in any other Place, unless that, or some such other Trunk, had its due Position in the Room. If this Story shall be suspected to be dressed up with some comical Circumstances, a little beyond precise Nature; I answer for myself, that I had it some Years since from a very sober and worthy Man, upon his own Knowledge, as I report it; and I dare say, there are very few inquisitive Persons, who read this, who have not met with Accounts, if not Examples, of this Nature, that may parallel, or, at least, justify this.

§. 17. INTELLECTUAL Habits and Defects, *Its Influence*
this Way contracted, are not less frequent and *on intellectual*
powerful, tho' less observed. Let the *Ideas* of
Being and Matter be strongly joined, either by Education, or
much Thought, whilst these are still combined in the Mind, what
Notions, what Reasonings, will there be about separate Spirits?
Let Custom, from the very Childhood, have join'd Figure and
Shape to the *Idea* of God, and what Absurdities will that Mind be
liable to, about the Deity?

LET the *Idea* of Infallibility be inseparably joined to any Person, and these two constantly together possess the Mind; and then one Body, in two Places at once, shall, unexamined, be swallowed for a certain Truth, by an implicit Faith, whenever that imagined, infallible Person dictates, and demands Assent without Enquiry.

§. 18. SOME such wrong and unnatural Combinations of *Ideas*, will be found to establish the *Observable in different Sects.*

Sects of Philosophy and Religion ; for we cannot imagine every one of their Followers to impose wilfully on himself, and knowingly refuse Truth, offered by plain Reason. Interest, tho' it does a great deal in the Case, yet cannot be thought to work whole Societies of Men to so universal a Perverseness, as that every one of them, to a Man, should knowingly maintain Falshood: Some, at least, must be allowed to do what all pretend to, *i. e.* to pursue Truth sincerely ; and, therefore, there must be something that blinds their Understandings, and makes them not see the Falshood of what they embrace for real Truth. That, which thus captivates their Reasons, and leads Men of Sincerity blindfold for common Sense, will, when examin'd, be found to be what we are speaking of. Some Independent *Ideas*, of no Alliance to one another, are, by Education, Custom, and the constant Din of their Party, so coupled in their Minds; that they always appear there together ; and they can no more separate them in their Thoughts, than if they were but one *Idea*, and they operate as if they were so. This gives Sense to *Jargon*, Demonstration to Absurdities, and Consistency to Nonsense, and is the Foundation of the greatest, I had almost said, of all the Errors in the World ; or, if it does not reach so far, it is at least the most dangerous one, since so far as it obtains, it hinders Men from seeing and examining. When two Things, in themselves disjoined, appear to the Sight constantly united ; if the Eye sees these Things riveted, which are loose, where will you begin to rectify the Mistakes that follow in two *Ideas*, that they have been accustomed so to join in their Minds, as to substitute one for the other, and, as I am apt to think, often, without perceiving it themselves ? This, whilst they are under the Deceit of it, makes them uncapable of Conviction, and they applaud themselves as zealous Champions for Truth, when, indeed, they are contending for Error ; and the Confusion of two different *Ideas*, which a customary Connexion of them in their Minds hath to them made in effect but one, fills their Heads with false Views, and their Reasonings with false Consequences.

§. 19. HAVING thus given an Account of the Original, Sorts, and Extent of our *Ideas*, with several other Considerations, about these (I know not whether I may say) Instruments, or Materials of our Knowledge; the Method I at first proposed to myself, would now require, that I should immediately proceed to shew, what Use the Understanding makes of them, and what Knowledge we have by them. This was that, which, in the first general View I had of this Subject, was all that I thought I should have to do: But, upon a nearer Approach, I find, that there is so close a Connexion between *Ideas* and Words; and our abstract *Ideas*, and general Words have so constant a Relation one to another, that it is impossible to speak clearly and distinctly of our Knowledge, which all consists in Propositions, without considering, first, the Nature, Use, and Signification of Language; which, therefore, must be the Business of the next Book.

The END of the FIRST VOLUME.
